Subject: Mosquito Control Permit Comments
Date: Saturday, March 06, 2010 9:08:43 AM

This is certainly a complex issue not to be bound by non-technical emotional rants. However, we are responsible adults who have taken the time to read the MSDS for the application of Adulticides for mosquito controls on our property (approx. 8 ac.). We also, have considered the possible risks to the environment with proper application procedures.
The risk reward balance is in favor of responsible applications of Larvicides AND Adulticides where potential human and animal diseases may exist. We are not willing to take the small risk that will sacrifice of health of innocent children or adults, when it is preventable.
I am quite sure that everyone will agree, that after a child has been sacrificed we will then allow responsible Adulticide applications.
We had an application of Vector Control Adulticide last year with outstanding results. The application was very responsibly applied. The application of Larvicide would not be beneficial as most mosquitoes are wind blown into surrounding trees.
We are opposed to this Legislation and believe there is sufficient authority to properly regulate the
applicators.

Thank You for your consideration:
