D GROUNDWATER MONITORING PLAN

This document describes an interim status groundwater monitoring plan for Closure Unit Group 22, 216-B-3 Main Pond. The interim status groundwater monitoring plan will be implemented for the groundwater monitoring requirements for the 216-B-3 Main Pond Closure Unit Group until a final status groundwater monitoring plan is incorporated into the Hanford Facility Dangerous Waste Permit (Hanford's sitewide permit). This Closure Unit Group is a regulated unit under the *Resource Conservation and Recovery Act* of *1976* (RCRA) and the *Hazardous Waste Management Act* [*Revised Code of Washington (*RCW) 70.105], and is subject to groundwater monitoring requirements pursuant to *Washington Administrative Code* (WAC) 173-303-645.

The 216-B-3 Main Pond Closure Unit Group is located within the secured area of the Hanford federal facility, near the Hanford Site's 200 East Area about 1,600 m (5,249 ft) east of the perimeter fence. A more detailed physical description of this 216-B-3 Main Pond Closure Unit Group is available in the interim status groundwater monitoring plan.

The following document, *Interim Status Groundwater Monitoring Plan for the 216-B-3 Pond*, DOE/RL-2008-59, Revision 0, is attached to this addendum.
