---

Gentlemen:

In my opinion it would be ill advised to cease or reduce nuisance and/or vector adulticiding of mosquitoes in the Burbank, Washington area. I have lived in Burbank Heights since the 1950s and clearly recall years in which the mosquito nuisance was rampant. I would loathe to see these conditions return. For myself and my family, the increased risk of contracting mosquito borne disease such as West Nile Virus and Encephalitis is not warranted. I find it disturbing that the State would, without compunction, materially reduce or eliminate Burbank residents' protection from these sorts of hazards.

My Walla Walla County property tax statement for CY2010 indicated monies would be allocated for mosquito control. I expect these fund to be expended in a manner which would best serve my interests and the interest of Burbank residents at large.

Yours truly,

Bill Meloy

Resident, Burbank Heights
