Subject: Mosquito Control Permit Comments - Moses Lake WA
Date: Thursday, March 04, 2010 10:00:16 AM

The NPDES permit, as written now, would prevent the application of adulticides to control nuisance mosquitoes. The application of adulticides could only be administered when human health is threatened.

The Department of Ecology is attempting to shut down the Mosquito Control District in Moses Lake to maintain a quality of life within Grant County that we have grown accustom to. It is not ok with myself or the members of the Moses Lake Business Association that the Department of Ecology thinks it's ok wait until a person becomes ill with West Nile Virus, Equine Encephalitis, or Saint Lois Encephalitis to spray. You should not require people to get sick before the Mosquito Control District to do their jobs. Then it's too late!

This will greatly impact our parks, our golf course, lake recreation, home comfort and tourism.

Have a GREAT day!

Marianne Bondi
