To Whom it May Concern,

Listed below are my comments to the Draft Industrial Stormwater General Permit:

Section S7. Inspections, A. Inspection Frequency 2. Certified Inspector.

Allow a temporary stormwater inspector to fill in until they can get certified, maybe a 3 to 6 month period depending on how many times the class is offered. This would be helpful if a certified inspector left a site and would allow a site some time to get another employee trained, and remain in compliance.

Appendix 6 should be based on the last two to three years of data under the previous Industrial Stormwater General Permit. If a site has been in compliance for the last two or three years then they should not be penalized for the entire period of record, especially since they met the requirements of the levels they were elevated to.

Thanks for let me comment of the Draft Industrial Stormwater General Permit.
