WATER QUALITY PROGRAM

Jon Jennings -

I understand that the mosquito control district is not going to be able to continue spraying for mosquitos out here where I live near Benton City. I live near an irrigation ditch that is run intermittently throughout the summer and therefore a great breeding ground for mosquitos. The West Nile virus has been found as near as Prosser and I am extremely concerned that it could end up in Benton City as well. I have two young granddaughters that love to play out here, but am worried for their safety as far as getting West Nile from these mosquitos.

Please consider allowing the mosquitos in this area to be sprayed.
Please!!
