Mr. Jennings,

The department of Ecology Aquatic Mosquito Control should be able to spray for mosquitoes but be cautious around water areas. Burbank is surrounded by water and is bad enough as is even with the spray and should be continued to be sprayed. If we were to take away the spray we would not be able to have family or outdoor activities during spring through fall because it would be dangerous for people to be outside with the viruses that the mosquitoes carry. Without the spray or chemicals even our livestock or family pets can be killed or infected by the mosquito. The viruses that mosquitoes carry are West Nile Virus and Encephalitis.

Respectively submitted,

Levi Henderson
