WATER QUALITY PROGRAM

5 March 2010

Dear Mr Jennings.

Your ecology for mosquito control is a load of garbage. Evidently you don't get out much in the evening when its cool so you can enjoy the outdoors. We love being in our yard and enjoying the cool evening breeze after the heat of the day. But if we don't have mosquito control you may as well not have a yard or anything to do with outdoors. You sit there and can see huge mosquitos comming for you and your forced in doors. You can't put enough repellent on to keep them off and since I have a daughter very allergic to these bites what are the alternatives for her to be out. They complain our children are to fat and why? You can't get out because of the bugs? Those mosquitos

CH#425

carry diease, Our pony has west nile thanks to some very cruel rules by dumb folks who dont live in these misquito areas. You need hearings in areas most effected Moses Lake doesn't have our problems nor do the Benton City have these problems get out of your ivory tower and visit these areas at evening. Stay out side till its dark and then tell us we cant spray for these diease carring pests.

Other places in diffuant parts of these United States are adopting misquito control as they realize the worth of spraying. So lets get with the program and get these diease carring pests under control Please!

Sincerly
Mrs Ethel Casey
