Dear Jonathon Jennings,

I live in Burbank and we are practically surrounded by swamps and rivers of all sorts here. I think that you should be able to adulticide for mosquitoes' because if we get more mosquitoes' then there already is, nobody would want to go outside. Here in Burbank, everybody practically knows everybody. We all love to go to the local playgrounds, stay up late around campfires, go boating, go fishing, and barbeque. There's even a camp ground down here so if there were more mosquitoes, nobody would want to camp there anymore and we would most likely have to shut it down. Every time we would go outside, we would want to limit our time out there so that we don't get bitten as much. We also might even be afraid to go outside; for fear that we would get West Nile Virus.

Respectfully submitted,

Tailen Rodriguez
