To who it may concern

You have to change the wording to your agreement letter. If u don't we will not be aloud to use fogging and if that happens we will need to go inside when the mosquito's come out. That means that working outside would be shortened because of the mosquito's being out of control. There would be less visiting outside unless we got the mosquito controlling devises or spays like "Off". I can accept the fact of nope dumping directly into the water its ok if u still spray then the mosquito's will still be their but they would still be there. If you stop dumping in the water then it will have other wildlife to life. You should learn what chemicals don't hurt the fish and other wildlife.

Respectfully submitted
