Subject: Industrial Stormwater Permits

The requirements that a only a Professional Engineer (PE) can sign off on some of the remedial measures/documents and that PEs are exempt from having to qualify as a Certified Inspector seems restrictive as Geologists/Hydrogeologist (G/H) licensed under the state system may also be qualified to sign and seal the required documents. As professional both PE's and G/H are bound by a code of ethics to only act in areas in which they have demonstrated expertise.

I am not suggesting that Licensed Geologists/Hydrogeologist sign off on engineering type drawings just the inclusion of PE's seems restrictive and does not recognize other licensed professionals operating in this field.

I would recommend that the definition of who can be a qualified person be expanded to include Licensed Geologists/Hydrogeologists
