Re: Proposed Water Quality Standards; 173-201A

Dear Ms. Niemi:

I AM CONCERNED ABOUT THE PROPOSAL FOR THE STATE WATER QUALITY STANDARDS. I WANT TO BE SAFE WHEN I EAT FISH AND I WANT OTHERS TO BE SAFE. ALSO RAISING THE FISH CONSUMPTION RATE TO 175 g/day IS APPROPRIATE AND A BENEFIT FOR HUMAN HEALTH. INCREASING THE RISK OF CANCER TENFOLD OFFSETS THE BENEFITS. PLEASE KEEP THE CANCER RISK AT 1 IN 1 MILLION. THE CURRENT PROPOSAL DOES NOT MAKE ANY MEANINGFUL GAINS IN WATER QUALITY. THE STATE OF WASHINGTON SHOULD DO BETTER.

Re: Proposed Water Quality Standards; 173-201A

Dear Ms. Niemi:

I am concerned that the raising of the cancer risk rate along with the fish consumption rate is redundant with regards to human health contaminants in water quality standards. The cancer risk rate ought to remain 1 in 1 million as it has in Oregon. I eat local & seafood and am thus very concerned about the health of me and my family. Please regulate pollutants into our waterways. Thank you

Re: Proposed Water Quality Standards; 173-201A

Dear Ms. Niemi:

I am writing as a concerned citizen of Washington state. I believe we must protect all people from the toxins and carcinogens ingested by consuming fish in & from our waterways. The proposal for the state water quality standards to raise the consumption rate to 175g/day is what needs to be done. PLEASE KEEP THE RISK OF CANCER AT 1 IN 1 MILLION.

Sincerely,

DEPARTMENT OF ECOLOGY

Re: Proposed Water Quality Standards; 173-201A

Dear Ms. Niemi:

I am concerned about the proposal for the state water quality standards. I want to be safe when I eat fish and I want others to be safe, also. Raising the fish consumption rate to 175g/day is appropriate and a benefit for human health. Increasing the risk of cancer tenfold offsets the benefit. Please keep the cancer risk at 1 in 1 million. The current proposal does not make any meaningful gains in water quality. The state of Washington should do better.
