SUPERIOR COURT
BETTY J. GOULD
THURSTON COUNTY CLERK

The Honorable Richard D. Hicks

IN THE SUPERIOR COURT OF THE STATE OF WASHINGTON IN AND FOR THE COUNTY OF THURSTON

AMERICAN RIVERS; CENTER FOR ENVIRONMENTAL LAW AND POLICY; WASHINGTON ENVIRONMENTAL COUNCIL; PACIFIC COAST FEDERATION OF FISHERMEN'S ASSOCIATIONS; and INSTITUTE FOR FISHERIES RESOURCES, Petitioners, v. STATE OF WASHINGTON, DEPARTMENT OF ECOLOGY, Respondent.	NO. 99-2-00480-6 ECOLOGY'S COMPLIANCE PLAN

COMES NOW the Department of Ecology, by and through its attorneys Christine O. Gregoire, Attorney General, and Thomas J. Young, Assistant Attorney General, and submits the attached Compliance Plan in response to the Court's oral ruling on December 6, 2000 in the above-referenced case. Ecology has submitted this plan to the plaintiffs, and made revisions in response to their comments. Ecology is not aware of any further

ATTORNEY GENERAL OF WASHINGTON

ATTORNEY GENERAL OF WASHINGTON
Ecology Division
PO Box 40117
Olympia, WA 98504-0117
FAX (360) 586-6760

Plan for demonstrating compliance with RCW 90.03.360 and Order of the Superior Court for Thurston County.

This report is intended to document Ecology's methodology for determining what is required to comply with the Court's order and the actions necessary to demonstrate to the Plaintiff and the Court that Ecology has complied with the order within two years. This report also offers a framework for documenting past actions that can partially satisfy the Court's order, a schedule for taking additional actions to attain full compliance with the Court's order, and a schedule with milestones and regular communication between the parties that can lead to confidence that the 2-year schedule for full compliance with the order can be met. Ecology's current opinion based upon the assessment to date is that compliance with the Court's order is achievable within the 2-year period.

Who should be required to measure or meter their water in order to comply with the Thurston County Superior Court order?

The first step to answer this question is to find a way to identify who is using water in the 16 "fish critical" watersheds. The 16 basins or watersheds conform to Water Resources Inventory Areas (WRIA) assigned by WAC 173-500. The WRIA inventory number has been included in Ecology's water right databases since they were first developed and it provides a reliable means to identify claims, permits, and certificates to use water in these watersheds or basin.

Water use data collected or estimated by federal agencies and published periodically by the USGS and others is not of sufficient detail to be directly useful for this task. The largest water users commonly measure or meter their water for billing customers. This information can help in the effort, but is not usually comprehensive enough to provide a basis for determining the total amount of water used in a basin or watershed. One exception to this is WRIA 1, where watershed assessment work has resulted in a comprehensive survey of water use.

We concluded that water right records supplemented with actual or estimated water use compiled by local, state, and federal agencies is the most feasible way to answer the question.

WRATS and query methodology

Water right claims, permits, and certificates to use surface water and ground water were selected by querying the WRATS database for all records within the WRIAs that comprise the 16 basins. The query results were reviewed and the instantaneous diversion rates were examined and compared to the stated uses claimed or authorized by the water right. In cases where the claimed quantity was not reasonable for the stated use, staff in the regional office adjusted the instantaneous quantity using best professional judgment or personal knowledge. The assumptions used to make the BPJ decisions are documented in Appendix 1.

Excel Spreadsheets, by Region and WRIA – Appendix 2

The results of the queries of the WRATS are presented in an MS Excel workbook. A page in the workbook contains the query result for each WRIA. Additional pages in the workbook are used to present the claims, permits, and certificates in rank order by the instantaneous diversion rate. The claims, permits, and certificates listed by WRIA are those that represent 80% of the estimated total instantaneous quantity of total water diversion/withdrawal within the WRIA.

Published data for estimated water use in the basin are used to determine the 80% threshold where appropriate. Some Hydrologic Units used by the USGS to aggregate the 1995 federal estimates do not coincide with the WRIA delineations used by Ecology.

How do we propose to demonstrate compliance with the order?

1. An assessment of which water users on the spreadsheets are already required to meter through permit conditions, regulatory orders, court orders, or as a condition of extension or change to a claim, permit, or certificate. These claims, permits, and certificates will be noted in the spreadsheets and the permit condition or order will be identified. Ecology will order the holders of these claims, permits, and certificates of their obligation to conform their metering and reporting practices with the requirements of the revised water metering rule that Ecology will promulgate pursuant to the Court's order by December 31, 2001, and Ecology will request prompt written confirmation from those so notified that they have conformed their measurement/metering and reporting practices to those required by the revised rule.

2. Ecology will issue an order to those holders of claims, permits, and certificates that do not have an existing requirement to measure their water use (the "non-obligated water users") as necessary to accomplish metering of 80% of the estimated water use in each of the 16 priority WRIAs. These users will be notified on the schedule set out below after Ecology creates a mailing list of property owners that correlates owners of the property within the legal description of the place of use with GIS and county parcel layers or county assessor records.

3. Measuring and reporting frequency, schedules, and confirmation of compliance for non-obligated water users will conform with Ecology's revised measuring/metering rule, and Ecology will request prompt written confirmation from these users that they have conformed their water measurement/metering and reporting practices to those required by the revised rule.

4. If no beneficial water use is occurring as authorized by the claim, permit, or certificate, this will be noted in the spreadsheet.

What are the milestones for completion and who is responsible for management and oversight of this plan?

1. By December 31, 2001, Ecology will substantially complete the assessment of which water users on the spreadsheets are already required to measure/meter through permit conditions, regulatory orders, court orders, or as a condition of extension or change to a claim, permit, or certificate.

2. By December 31, 2001, Ecology will complete rulemaking on the water measuring and metering rule.

3. By March 31, 2002, Ecology will issue orders to the holders of claims, permits, and certificates who are already required to measure or meter their water. The orders will notify water users of their obligation to conform their metering and reporting practices with the requirements of the revised water metering rule that Ecology will promulgate pursuant to the Court's order by December 31, 2001, and Ecology will request prompt written confirmation from those so notified that they have conformed their measurement/metering and reporting practices to those required by the revised rule.

4. By June 30, 2002, Ecology will issue orders to 25% of the non-obligated water users, if any, who must measure/meter their water use in order to reach the requirement of measuring/metering 80% of estimated water use in each of the 16 priority WRIAs, and will notify them of the need to conform their metering and reporting practices to the requirements of the revised measurement/metering rule and provide Ecology with prompt written confirmation of their compliance.

5. By September 30, 2002, Ecology will issue orders to an additional 50% of the non-obligated water users in conformance with the terms of paragraph 4.

6. By December 31, 2002, Ecology will issue orders to the remaining non-obligated water users in conformance with the requirements of paragraph 4.

7. Reports to Plaintiff – Ecology will provide the Plaintiffs with quarterly updates to the spreadsheet following the December 31, 2001 report for review and discussion relating to Ecology's progress toward completion of the plan.

8. Contingency Plan – Ecology believes that it can meet the milestones identified in this plan without substantially reassigning compliance staff to different regional offices for extended periods or by permanent redistribution of resources. However, if the milestones in one or more of the 16 WRIAs cannot be met without reassigning staff or financial resources, Ecology will redistribute staff or resources to those WRIAs no later than September 30, 2002 to ensure completion of the plan in all 16 WRIAs.

9. Effect of Budgetary Reduction – In the event that currently-funded compliance resources are reduced substantially by the legislature and Ecology cannot

accomplish this plan in the two-year period directed by the Court, Ecology reserves the right to propose a modified schedule of implementation and present it to the Plaintiffs prior to requesting a modification to the court order. Plaintiffs reserve the right to object to any such modification.

10. The section managers in each of the four regional offices and the program manager of the Water Resources Program are responsible for the successful completion of this plan.

Metering

Methods and assumptions for determining the 80% water use value in each watershed.

Run a report in the Cardex system asking for all Permits, Certificates, and Claims within each WRIA. Print this report to a DATA file. Bring it into Paradox and query the list to remove the unwanted fields. Export the answer table as a Lotus 123 (WK1) file. Open this file in Excel.

Make separate worksheets for the GW documents and SW documents because the Qi units are different. Convert the GW Qi units to CFS and merge the two worksheets back into one. (You could sort the data by control number and just work on the GW block, but I found it easier to keep things separate doing it this way.)

Sort the combined table by CFS (in descending order).

Assumptions and adjustments. All documents without a Qi (either cfs or gpm) will be given the equivalent of 0.02 cfs (9 gpm). Many of these documents will be short form claims, or claims that are incomplete. (Note: you may find claims that have no Qi listed but have the number of acres listed. These are still given the nominal value of 0.02 cfs.)

Add these values to the table. Then re-sort the table by CFS (in descending order).

I have found that numerous surface water documents have erroneous values for Qi. The document may say 10 gpm, but in the database it appears as 10 cfs. This is more prevalent with claims, but may also occur with Certificates. To reduce the effects of this inherent error, I manually examined most water right claims greater than 5 cfs and made corrections as necessary. (NOTE: The claims that were examined were only the claims that we have images of in our office. This does NOT include the 300,000 series claims that were filed in the 1998 claims opening.)

Here is where you use your judgement on whether a document actually represents a water use and to what extent. Some of the 300,000 series claims were removed from the list for somewhat obvious reasons. For example, I found some claims for 20 cfs from an unnamed spring. A spring that flowed at 20 cfs would not be unnamed (and other attributes of the document seemed to be erroneous). Because we did not have the claims or images of the claims, I could not verify what the units were on the document. Some appeared unreasonable and were removed from the list. (You could replace the Qi with 0.02 cfs, but in the long run there aren't that many of them and it doesn't add up to much.)

Check the purposes with the amount of water use. If the purpose is DG (domestic, general) only, and there is a value of 5 or 10 in the CFS field, it is highly likely that the value is in GPM not CFS. I have also found values of "gallons per day" (or "gallons per week"!) in the CFS/GPM fields.

Numerous SW documents have a value in the GPM column but nothing in the CFS column. By looking at the number of aces irrigated and/or acre-feet columns it is possible to make an educated guess as to whether the value is in GPM or not. If so, convert to CFS. If uncertain, leave the CFS field blank.

Re-sort the list by Qi and sum the Qi (cfs) column to get the estimate of the 100% water use.

Determine the 80% value and then determine which water rights/claims fall into that 80%. (I used the SUM function and just incrementally adjusted the included cells until the sum was near or exceeded the 80% value.)

If there are SW claims that were not examined in the earlier check, they should be manually examined, corrected and replaced in the list if appropriate.

Water Resources Program

Metering

Methods and assumptions for determining the 80% water use value in each watershed.

Run a report in the Cardex system asking for all Permits, Certificates, and Claims within each WRIA. Print this report to a Data file. Bring into Access, omitting unnecessary fields. Import file to Excel.

Assumptions and adjustments. All GPM values were converted to CFS. Documents for irrigation without a CFS value were formulated at .02 CFS times the number of acres irrigated. Other documents without a CFS value were given the nominal value of 0.02 CFS. Documents with less than 40 acres of irrigation were deleted.

These spreadsheets have not yet been completely scrubbed. CFS versus purpose of use still needs to be looked at.

Method used by the NWRO to create the "80%" water right list

For WRIAs 7, 8 & 9:

The first step was to determine the total water quantity used in each WRIA. These values were obtained from a regional water inventory report (Central Puget Sound Regional Water Supply Outlook. Puget Sound Water Suppliers Forum, 022500). The values were summed and a total water quantity for WRIA 7, 8 and 9 was established. WRIAs 7, 8 and 9 were combined into one unit because the large suppliers transport water across WRIA borders.

The second step comprised identifying the water suppliers who use 80 % of the water in the three WRIAs. This was accomplished by reviewing the water supplier's published water use data. Then a final list of the supplier's certificates, permits and claims was assembled using WRATS.

For WRIA 1:

The first step was to determine the total water quantity used in WRIA 1. This estimate was obtained from the WRIA 1 planning project being conducted by Whatcom County.

The second step was to generate a list of the major water suppliers in WRIA 1. This was accomplished by reviewing the Whatcom County Coordinated Water System Plan (April 1993). The water supplier list that was generated comprised 77% of the water used in the WRIA. Then a final list was created which included the water rights held by these major water suppliers.

The third step was to compile two separate lists of all the water certificates and permits (except for the water rights in the second step) in WRIA 1 using data from WRATS. One list included only ground water rights and the other included surface water rights. For the ground water list a total quantity of water was obtained by summing the acre feet value for each water right. Then the largest ground water rights, by acre-feet, were selected until 10% of the total quantity was reached. These water rights were added to the major water supplier list created in the second step. For the surface water list the same procedure was used as the groundwater list, but the cubic feet per second value was used instead of the acre-feet value. Claims, due to the lack of water quantities, were not included in the procedure.

The final water right list composed of the rights from the second and third step comprised more than 80% of the water used in WRIA 1.

Process for Identifying SWRO's "80/20" Water Rights Records

1. Received a statewide WRATS query from Roger von Gohren (2/20/01)
2. Deleted all non-SWRO records (saved only those with a *2-******)
   (dmmdsddbm_swro_all)
3. Grouped records by "document type"
   Certificates/permits/changes (dmmdsddbm_swro_all_certs_permits_changes)
   Claims (dmmdsddbm_swro_all_claims)
   Applications (dmdssddbm_swro_all_apps)
4. For pertinent records, retained only those related to the "16 critical basins" (WRIAs 10, 12, 17, and 18)
   Certificates/permits/changes (dmmdsddbm_swro_crit16_certs_permits_changes)
   Claims (dmmdsddbm_swro_crit16_claims)
5. Pared down datasets to include only pertinent documents
   a) For Certificates/permits/changes:
      Deleted [one] record with a "^" in the control number
      Deleted cancelled permits
      Deleted relinquished certificates
      Deleted reservoir documents
      Used listed cfs
      Converted listed gpm to cfs
      Cross-referenced changes with certificates
         Deleted duplicate records (G2-*00015C; G2-*01900C) and those in non-critical WRIAs (G2-*01426BCL; CG2-25080); changes with "new" 6-digit numbers were retained (because there's no "old" certificate document)
      Looked up certificate files for records without a Qi (2 records)

   b) For claims:
      Deleted records with a "document status" of "rejected"
      Used listed cfs
      Converted listed gpm to cfs
      Assigned 0.02 cfs to all records without a listed Qi
         Pulled and double-checked these records with more than 100 "acre-feet" or more than 100 "acres irrigated" (seven of these "acres irrigated" claims were not changed from 0.02 cfs because we couldn't find the documents)

6. Separated certificates/permits and claims files by WRIA

7. Merged certificates/permits and claims files into a single file for each WRIA

8. Summed Qi and calculated 80% of the total volume for each WRIA

9. Sorted the list for each WRIA by Qi (beginning with the largest allocation) and identified records required to exceed 80% of the total
