

# **WATER for PEOPLE, FARMS & FISH**

## ***Community Forum: Managing Water in Your Watershed***

*Hosted by the Washington State Department of Ecology*

**Tuesday, July 31, 2007  
6 - 9 p.m.**

**Chimacum High School  
Auditorium  
91 West Valley Road  
Chimacum, WA**

Population growth will bring water management challenges to the Quilcene-Snow watershed (WRIA 17). Local residents and others interested in how future demand may impact water supplies in their part of the watershed are invited to learn more about the instream flow rule process in a presentation with questions- and- answers .

Among the questions for consideration:

- ◆ How may growth affect the sub-basin where you live?
- ◆ Where are the major areas of concern?
- ◆ What active management tools are available to protect future water supplies?

There will be several ways to record your comments and opportunities to speak one-on-one with Department of Ecology staff and local water authorities. Written materials, maps, displays and videos will also be available before and after the presentation.

For special accommodation needs, please call (360) 407-6878.
