

**The Department of Ecology's Response to:  
Steve Britsch - Snohomish County Public Works (Comment 60)**

**Listing 9296**

The lowest measurement recorded at this segment was 9.5 mg/l in 2006. The standards state that for this location, the criteria for dissolved oxygen shall exceed 9.5 mg/l. This was close, but this segment barely falls into category 5 as impaired for dissolved oxygen.

**Listing 16688**

The remark contained in the draft for this listing was confusing. The remark referred to another location that was consolidated with this listing during the latest assessment because both locations are within the water segment. The standards are not consistently met over the last 8 years at both locations within the segment. The remark has been removed.
