Hand Grinders with Vacuum Shrouds

A shrouded grinder provides another productive alternative to achieve dustless coating removal without chemical stripping. We offer the quality of Metabo grinders, German engineered to world-class standards, and a custom designed convertible shroud designed for open areas or the harder to reach areas and edges. When outfitted with a turbo cup diamond wheel, you combine power and dust control with the most aggressive diamond wheel in the industry.

The vacuum port molded convertible shroud adapts from standard application to edging by simply flipping up the front section allowing grinding up to the edge. This versatile grinder offers greater production in small areas, edges, corners and hard to reach areas than blasters.

Complete with loop handle for operator comfort, and adaptable to other abrasive pads and grinding "zec" wheels, our shrouded grinders are productive and priced right for your concrete applications.

Features and Benefits

- Flexible polyurethane material (vacuum shroud)
- Vacuum port molded in (not glued)
- Designed to work well with a variety of diamond cup wheels or abrasive pads
- Saves clean up time
- Reasonable cost
