Comment:

I believe the numbers used to project annual demand for hook-ups are too low. At the meeting I believe the average was arrived at by averaging the total number of new hookups from 2001 – 2013. From 2007 – 20013 however the numbers would have been below normal because of the Great Recession.

Suggestion:

Have a sign up for people who want to acquire a mitigation credit. Ask them how many credits and when they would like to acquire them.

Keep up the good work.

Regards

Marty Robinett
