

*State of Washington ~
Province of British Columbia
Coastal and Ocean Task Force*

Terms of Reference

Mandate:

The Washington-British Columbia Coastal and Ocean Task Force (COTF) is established to provide a mechanism to enhance collaboration between the State of Washington and the Province of British Columbia on coastal and oceans issues. The geographic area of interest includes Puget Sound, the Georgia Basin, and the outer coasts of Washington and British Columbia.

Task Force Goals:

- *Increase communication between governments on oceans and coastal issues.*
- *Foster collaborative activities to improve the health of shared marine waters.*
- *Monitor and report on progress to protect our marine waters.*

Objectives:

To provide a transboundary forum to share information and collaborate on activities that:

- *Protect and restore coastal and marine habitats;*
- *Encourage the development of ecosystem management approaches for ocean and coastal resources; and*
- *Foster sustainable coastal communities and development.*

Activities:

The Task Force will undertake activities to:

- *Promote the exchange of technical and scientific information;*
- *Identify priority transboundary issues and recommend collaborative actions; and*
- *Sponsor and participate in international conferences and workshops on issues of mutual interest.*

Task Force Membership:

Washington and British Columbia will appoint co-chairs who will be responsible for ensuring broad representation on the Task Force from coastal and ocean resource management agencies in respective jurisdictions.

Task Force Operations

The Task Force will develop an annual work plan for approval by British Columbia-Washington Environmental Cooperation Council.

The Task Force will develop action plans and status reports on priority issues.

The Task Force will generally meet twice a year or as required.

Reporting:

The Task Force will report to the Governor and Premier through the British Columbia-Washington Environmental Cooperation Council, and report on progress at an annual meeting of Washington and British Columbia governments.

Forest Memorandum of Understanding

The State of Washington and the Province of British Columbia share similar benefits, challenges, and opportunities associated with a large amount of our lands in forested ecosystems.

In the spirit of mutually improving our forest health conditions, adapting to climate change, increasing capacity and effectiveness for wildfire protection, and producing bio-energy from forest products, the signatories agree to:

- *Work cooperatively with Washington and British Columbia counterparts to share research, data and information on how climate change will likely affect forest health, and share strategies to achieve healthy forest ecosystems in the future. Through a joint meeting this fall, this cooperative work will also explore opportunities for cross-border demonstration projects, and share approaches on carbon life-cycle modeling and carbon sequestration accounting.*
- *Under existing cooperative agreements on cross-border fire protection, recognize that declining forest health and climate change likely will lead to larger and more frequent wildfires. We will seek opportunities to share strategic outlooks, fire prevention plans and complementary expertise on forest fuels management, prevention, pre-suppression, and suppression actions.*
- *Seek opportunities to share data, technical approaches and joint research projects to produce renewable energy and fuel products from the large amounts of woody biomass now found in many of our forests. The production of renewable energy from low-value wood can also contribute to rural economic development, reduced wildfire risk and improved forest health.*
