

UW/DOE Orchard Wood Pulping Project

Problem:

Orchard tearouts are causing significant air pollution in valleys.

Solution:

Chip orchard wood for pulpwood

Boise Paper Solutions in Wallula is willing to take orchard wood chips if the chips are high quality. Research done at the University of Washington in conjunction with Washington State Department of Ecology concludes that if the chips are good quality, they can be pulped and turned into paper.

For more information on chipping of orchard wood please call:
