HANFORD AIR OPERATING PERMIT
PERMIT NUMBER 00-05-006
RENEWAL 2, REVISION A
ATTACHMENT 1

Number: 00-05-006 (Hanford AOP Renewal2, Rev. A)

State of Washington Department of Ecology (Ecology)
Nuclear Waste Program
3100 Port of Benton Blvd.
Richland, Washington 99354

The permittee is authorized to operate the air emission units identified in this Air Operating Permit Number 00-05-006 and all insignificant emission units not specifically identified in this permit.

Dated at Richland, Washington, April 25, 2014

1.0 EMISSION STANDARDS AND LIMITATIONS

Emission standards and limitations for non-radioactive air pollutants are included in the following sections.

1.1 Insignificant Emission Units

Insignificant emission units (IEUs) are listed in the Statement of Basis for this attachment. All IEUs shall maintain compliance with the general requirements in Table 1.2. Compliance with General Standards for Maximum Emissions (Section 1.3) is required. However, the periodic monitoring, testing, recordkeeping, or reporting requirements listed in Table 1.2 are not required. Also the compliance certification is not required for IEUs.

All emission units not identified in Table 1.1 (List of Significant Emission Units) that are subject to 40 CFR 61, Subpart H in Attachment 2, Health License, have been determined to represent insignificant sources of non-radioactive regulated air pollutants. For these emission units no additional monitoring, reporting, or recordkeeping is necessary to determine compliance with the requirements in Table 1.2. All requirements identified in Attachment 2, Health License, for this category of emission unit continue to apply, as well as the requirement to annually certify compliance to any applicable requirements identified in Attachment 2, Health License.

These insignificant emission units need not be listed individually in the annual compliance certification unless there were observed, documented, or known instances of non-compliance during the certification period. Ecology has authority to establish case-by-case monitoring requirements as set forth in WAC 173-400-105 or other provisions of law.

1.2 Emission Units and Activities subject to Monitoring, Reporting, Recordkeeping, and Compliance Certification

Table 1.1 identifies those emission units on the Hanford Site subject to the requirement to annually certify compliance with the terms and conditions of this Permit. The emission units listed in Table 1.1 are subject to the generally applicable requirements in Table 1.2, General Standards for Maximum Emissions unless replaced by another requirement in Tables 1.3, 1.4, 1.5, 1.6 or 1.7. Emission unit-specific requirements for these emission units are found in Tables 1.3, Emission Limits and Periodic Monitoring Requirements for Steam Generating Units; Table 1.4, Internal Combustion Engines: 500 Horsepower and Greater; Table 1.5, Internal Combustion Engines: less than 500 Horsepower; Table 1.6, Emission Limits and Periodic Monitoring Requirements for Emission Units with NOC Approval Conditions or an engine listed in Table 1.5; or Table 1.7, Miscellaneous Emission Units.

1.3 General Standards for Maximum Emissions

Table 1.2 covers general regulatory requirements, emission limits, or work practice standards applying to all emission units [refer to definition of emission units in WAC 173-401-200(12)] on the Hanford Site. The general standards in Table 1.2 are the applicable requirement, emission limit, or work practice standard unless replaced by another requirement in Tables 1.3, 1.4, 1.5, 1.6 or 1.7.
1.4 Emission Unit Specific Applicable Requirements

Emission unit specific requirements for steam generating units are located in Table 1.3, internal combustion units greater than 500 horsepower are in Table 1.4, internal combustion units less than 500 horsepower are in Table 1.5, specific discharge points are in Table 1.6, and miscellaneous emission units are in Table 1.7.

1.5 Engines Regulated Under 40 CFR 60, subpart IIII and JJJJ, and 40 CFR 63, subpart ZZZZ

Table 1.5 is for engines regulated under 40 CFR 60, subpart IIII and JJJJ, and 40 CFR 63, subpart ZZZZ.

1.6 Specific Discharge Points

Table 1.6 is for emission units that have received an Ecology approval order to operate under WAC 173-400-110 New Source Review or an engine identified in Table 1.5.

Table 1.6 Discharge Points

All emission units identified in Table 1.6 have the following general requirements where more stringent conditions do not exist and as applicable to the individual emission units.

Discharge Point: General Requirements

Requirement Citation (WAC or Order Citation): WAC 173-400-040(2)

Condition Approval

Condition: 20% opacity: Prohibits visible emissions exceeding 20% opacity for more than 3 minutes in any 1 hour of an air contaminant from any emissions unit or within a reasonable distance of the emission unit except for scheduled soot blowing/grate cleaning or due to documented water.

Periodic Monitoring: Section 2.1, unless an alternative visible emissions, opacity, or particulate matter emission limit is identified in Table 1.6.

Test Method: EPA Method 9 of 40 CFR 60, Appendix A.

Test Frequency: Not applicable.

Required Records: As specified in Section 2.1.

State-Only: No.

Calculation Model: Not applicable.

Requirement Citation (WAC or Order Citation): WAC 173-400-040(7)

Condition Approval

Condition: 1000 ppm SO₂ @ 7% O₂ on a dry basis. Prohibits emission of a gas containing sulfur dioxide from any emissions unit in excess of 1000 ppm of a dry basis, corrected to 7% oxygen for combustion sources, and based on the average of any period of 60 consecutive minutes.

Periodic Monitoring: Section 2.7, Tier 2, unless an alternative SO₂ emission limit is identified in Table 1.6.

Test Method: EPA Method 6 or 6C of 40 CFR 60, App. A.

Test Frequency: Not applicable.

Required Records: As specified in Section 2.7.

State-Only: No.

Calculation Model: Not applicable.
Discharge Point  Concrete Batch Plant

200E Area, Vitrification

Requirement Citation (WAC or Order Citation): DE01NWP-003 (8/21/2001), 9/24/2002 Revision, and 3/12/2003 Revision

Condition Approval 8/21/2001

Condition: Total Emission Limits

A. Particulate Matter - Particulates from the bag-house exhaust shall not exceed 0.01 grains per dry standard cubic foot, with no visible emissions. Engineering calculations or vendor information that the bag-house, when properly operated and maintained, will control emissions to less than 0.01 grains per dry standard cubic foot will be available at the facility. Periodic measurements shall consist of visible emission inspections per EPA Reference Method 22, 40 CFR 60, Appendix A, July 1, 2000.

B. Fugitive Dust - Visible emissions from the sand and aggregate transfer points, truck loading station, the piles, or any other source shall not be allowed beyond 100 yards.

Periodic Monitoring: A. Recordkeeping

Test Frequency: Not applicable.

Required Records: A. Calculations, vendor information, baghouse maintenance logs, surveillance checklists.

B. Visible emission survey results.

State-Only: No.

Calculation Model: Not applicable.
Condition Approval 8/21/2001

Condition: Fugitive Dust

All unpaved areas at the CBP and quarry will be controlled by watering, chemical stabilization, or both. Means of chemical stabilization include the application of petroleum resins (EPA 1998). A water spray additive, (such as, "soil cement") will also be considered for application on unpaved roads. Soil cement has been previously used on the Hanford Site with effective results.

Vehicle speed limit signs will be posted to control speeds. Paved roads between the quarry and CBP will be kept clear of heavy accumulations of dust and debris. Front-end loaders will be used to pick up any significant spill of sand or aggregate material on the pave roads between the quarry and CBP. The sand and aggregate stockpiles will be kept sprinkled with water to prevent the movement of materials that may migrate because of wind erosion. Transfer points at conveyors, crushers, and screens will also be sprayed with water.

Periodic Monitoring: Recordkeeping
Test Method: Not specified.
Test Frequency: Not applicable.
Required Records: Surveillance checklists.
State-Only: No.
Calculation Model: Not applicable.

Condition Approval 8/21/2001

Condition: Emission Control Monitors

Emission equipment control monitors shall include but not be limited to the following:
A. Bag house - None required if there are no visible emissions per section 1.A. of the APPROVAL CONDITIONS, and maintenance records indicate proper maintenance practices and schedules.

Periodic Monitoring: Recordkeeping
Test Method: Not specified.
Test Frequency: Not applicable.
Required Records: Surveillance checklists and bag house maintenance logs.
State-Only: No.
Calculation Model: Not applicable.
**Condition Approval 8/21/2001**

Condition: General Conditions

A. Visible Emissions: No visible emissions shall be allowed beyond 100 yards of source. During periods of high winds, an assessment shall be made to suspend operations or initiate a more comprehensive plant watering scheme.

Periodic Monitoring: Visible Emission Surveys.

Test Method: Not specified.

Test Frequency: Not applicable.

Required Records: Results of visible emission surveys.

State-Only: No.

Calculation Model: Not applicable.

**Condition Approval 3/12/2003**

Condition: Diesel Fuel Oil Boiler

1. A 4.4 MMBtu diesel fuel oil boiler will be operated.
2. The diesel fuel sulfur content will be less than or equal to 0.05% S, by weight.
3. Operation of the boiler is limited to 2000 hours per year.
4. Good combustion engineering practices shall be followed, including adherence to the boiler manufacturer’s specification for operation, maintenance, and combustion control.
5. Specific combustion feed gas ratios, including the fuel-air ratio, monitoring, startup and shutdown procedures shall be followed to maximize combustion efficiency and minimize discharge of pollutants into the atmosphere.

Periodic Monitoring: Recordkeeping

Test Method: Not specified.

Test Frequency: Not applicable.

Required Records: 1. Manufacturer’s specifications for operation, maintenance, and combustion control.
2. Records of operating hours.
3. Records of fuel specification (sulfur content).
4. Records of good combustion engineering practices and operating procedures.

State-Only: No.

Calculation Model: Not applicable.
Discharge Point  CWC

200W Area, Central Waste Complex

Requirement Citation (WAC or Order Citation): DE00NWP-002 Revision 1

Condition Approval 6/29/2006

Condition: Visible emissions shall not exceed limits specified in WAC 173-400-040(2).

Periodic Monitoring: Tier 3 survey/observation.

Frequency: Not applicable (assessment of cause of visible emissions).

Test Method: EPA Method 9 of 40 CFR 60, Appendix A or Tier 3 Visible Emissions Survey of this AOP.

Test Frequency: Routine observation.

State-Only No.

Calculation Model Not applicable.

Condition Approval 6/29/2006

Condition: VOC emissions shall not exceed 3.5 tons per year.

Periodic Monitoring: Emission estimation (Condition 3.0 of the NOC).

Frequency: Annually.

Test Method: Material assessment, inventory, and calculation as identified in the NOC Approval Condition 3.0.

Test Frequency: Annually.

Required Records: Results of analyses.

State-Only No.

Calculation Model Not applicable.

Condition Approval 6/29/2006

Condition: All TAPs, as submitted in the Permittee’s Notice of Construction Application, shall be below their respective ASIL.

Periodic Monitoring: Emission estimation (Condition 3.0 of this NOC).

Frequency: Annually.

Test Method: Material assessment, inventory, and calculation as identified in the NOC Approval Condition 3.0.

Test Frequency: Annually.

Required Records: Results of analyses.

State-Only No.

Calculation Model Not applicable.
Discharge Point  E-282ED 001

200E Area, Emergency Fire Pump Generators

Requirement Citation (WAC or Order Citation):  NWP-96-1

Condition Approval 4/30/1996

Condition:  Engine E shall operate no more than 350 hours per year.

Periodic Monitoring:  Recordkeeping.

Test Method:  Not specified.

Test Frequency:  Not applicable.

Required Records:  Maintain records showing all hours of operation.

State-Only  No.

Calculation Model  Not applicable.

Condition Approval 4/30/1996

Condition:  NOx 75.5 pounds per hour NOx.

Periodic Monitoring:  Recordkeeping & average fuel consumption rate determination shall be performed at least once per 12 months.

Test Frequency:  Not applicable.

Required Records:  1. Monthly fuel burned (this calculation is based on fuel added to supply tank).

2. Hours of operation logged.

State-Only  No.

Calculation Model  2B.

Condition Approval 4/30/1996

Condition:  Engine E shall burn only No. 2 fuel oil with sulfur content no more than 0.05 weight percent.

Periodic Monitoring:  Recordkeeping for compliance with condition.

Test Method:  Not specified.

Test Frequency:  Not applicable.

Required Records:  Vendor documentation of fuel purchase from retail outlet (i.e., for use in motor vehicles, see 40 CFR 80), or fuel analysis once per year showing \( \leq 0.05 \text{wt\%} \) sulfur.

State-Only  No.

Calculation Model  Not applicable.

Emergency Diesel Generators

**300 Area, Generators**

**Requirement Citation** (WAC or Order Citation): DE02NWP-001

**Condition Approval 1/15/2002**

**Condition:** Total Emission Limits

A. The activities described in the Notice of Construction application will be permitted without additional control technologies required, provided that the total emissions from all activities will not result in exceedance of WAC 173-460 ASILs.

B. A new Notice of Construction will be required, if total emissions of toxic air pollutants exceed the Small Quantity Emission Rates, unless dispersion modeling demonstrates that emissions would continue to result in concentrations less than the ASILs. Results of any such dispersion modeling demonstrations/calculations will be maintained on file and made available upon inspection.

C. A new NOC also is required if total emissions of criteria pollutants would exceed the WAC 173-400-110 thresholds.

**Periodic Monitoring:** Analyze each proposed change to determine if emissions would exceed an ASIL or NSR threshold.

**Test Method:** Not specified.

**Test Frequency:** Per fuel shipment.

**Required Records:** Vendor documentation or fuel analysis showing sulfur content < 0.5%.

**State-Only** NSR thresholds – No.

**ASILs - Yes.**

**Calculation Model** Not applicable.

**Condition Approval 1/15/2002**

**Condition:** Emissions Control

SOx emissions will be controlled through use of #2 Diesel Fuel with sulfur content less than 0.5%.

**Periodic Monitoring:** Recordkeeping.

**Test Method:** Not specified.

**Test Frequency:** Per fuel shipment.

**Required Records:** Vendor documentation or fuel analysis showing sulfur content < 0.5%.

**State-Only** No.

**Calculation Model** Not applicable.

Discharge Point  P-296A042-001

200E Area, 241-AY and 241-AZ Tank Farms - Ventilation Upgrades

Requirement Citation (WAC or Order Citation):  NOC 94-07 (8/29/1994), Rev 1 (12/22/1997), Rev 2 (10/25/1999), Rev 3 (5/7/2008), and Amd A (3/26/2013)

Condition Approval 5/7/2008 (Rev 3)

Condition: Visible emissions at the stack shall not exceed 5%. Should visible emissions be observed, the excess emissions shall be discontinued by removing the emission unit from service and Health notified immediately.

Periodic Monitoring: Tier 3 requirements (Condition 2.1, Visible Emission Surveys).

Test Method: Maintain abatement control technology (AOP Attachment 2).

Test Frequency: Not applicable.

Required Records: Operation logs or records.

State-Only Yes.

Calculation Model Not specified.

Condition Approval 5/7/2008 (Rev 3)

Condition: The primary tank ventilation exhauster system for the 241-AY and 241-AZ double-shell tank farms shall not exceed daily average flow rates of 1,000 ft³/min (standard temperature and pressure).

Periodic Monitoring: Flow calculations based on stack gas flow and temperature measurement.

Test Method: Flow calculations.

Test Frequency: Semi-annually.

Required Records: Calibrations and calculations of exhauster system stack gas flow and temperature measurement devices.

State-Only Yes.

Calculation Model None specified.

---

3 Per Approval Order DE11NWP-001, NOC Approval Order 94-07 will become obsolete and void when the new 241-AY/AZ ventilation system covered by the new Approval Order DE11NWP-001 becomes fully operational.

Discharge Point  P-296W004 001
200W Area, Waste Receiving and Processing

Requirement Citation (WAC or Order Citation):    DE03NWP-002

Condition Approval  5/21/2003

Condition:    Emission Controls Monitors:  Source data from an Organic Vapor Analyzer using a Photoionization detector (PID) with at least an 11.7eV lamp, or other device capable of detecting TAPs, was conducted by the facility in providing verification of de minimis (i.e., parts per million levels) fugitive emissions in the drum storage and NDE/NDA areas. The results of source test information, conducted on or at the source(s) locations in lieu of downstream at the stack, have been provided to the permit writer under separate cover. This information has been determined to satisfy the previous approval order condition for this source in performing one-time monitoring to demonstrate TAP emissions are below the estimates provided in the NOC application and T-BACT analysis for the drum storage and DNE/NDA areas. As such, no additional sampling or monitoring will be required under this approval order. The facility will continue to perform at least once every two years, and make available upon request or inspection, results from any Industrial Hygiene program measurements to further demonstrate compliance with limits contained herein. The test plan for conducting these measurements shall also be maintained on file and made available upon request and/or inspection by Ecology.

Periodic Monitoring:    IH Program measurements as specified in NOC, including alternative methods.

Test Method:    Not specified.

Test Frequency:    Once every two years.

Required Records:    Test plan.

Measurement results.

State-Only    Yes.

Calculation Model    Not applicable.
Condition Approval 5/21/2003

Condition: Total Emission Limits: For toxic compounds not included in the T-BACT analysis, the emission limits shall be the Small Quantity Emission Rate (SQER). A modification submittal of a Notice of Construction (NOC) application will be required if the SQER limit would be exceeded for compounds not addressed under the T-BACT assessment. The calculation/measurement methods described in section 4 of the NOC Approval Order DE03NWP-002, or other method as approved by Ecology, may be used to document compliance with the SQER limit.

Periodic Monitoring: PID or other device capable of detecting TAPs measurements.

Test Method: Not specified.

Test Frequency: Once every 2 years.

Required Records: 1. IH Test Plan.
2. Results of measurements.

State-Only: Yes.

Calculation Model: Not applicable.

Condition Approval 5/21/2003

Condition: An internal annual assessment of the facility container tracking system, such as SWITS of the data management system (DMS), shall be conducted by the facility to document/verify de minimus emissions from the source. This assessment will be maintained on file, made available for Ecology inspector requests, and compiled into emission estimates that will be reported annually beginning as part of the Calendar Year 2003 nonradioactive inventory of airborne emissions.

Periodic Monitoring: Recordkeeping; Comparison to threshold.

Test Method: Not specified.

Test Frequency: Annually.

Required Records: 1. Throughput records, SWITs query evaluation if > 1,000 drums.
2. Nonradioactive air emissions inventory report required by WAC 173-400-105.

State-Only: Yes.

Calculation Model: Not applicable.
**Condition Approval 5/21/2003**

**Condition:** The processing and repackaging activities described in the Notice of Construction application will be permitted without requiring additional emission controls, provided that the emissions from the stack, venting the 100 and 300 Series Waste Process Lines, the 200 and 400 Restricted Waste process Lines, the process area, and the storage areas are maintained below the level described in and meeting T-BACT (according to WRAP Module 1 Best Available Control Technology Assessment, WHC-SD-W026-TI-005, January 1993, Westinghouse Hanford Company, Richland, Washington).

**Periodic Monitoring:** Recordkeeping.

**Test Method:** Not specified.

**Test Frequency:** Not applicable.

**Required Records:** Documentation implementing T-BACT.

**State-Only** Yes.

**Calculation Model** Not applicable.

Requirement Citation (WAC or Order Citation): WAC 173-400-040(9)(a); DE02NWP-002, Revision 2; and PSD-02-01, Amendment 2.

Condition Approval: 11/13/2006

Condition: FUGITIVE DUST CONTROL

8.1 Construction Phase Fugitive Dust Control Plan(s), prepared using EPA and Ecology guidelines, shall be developed and implemented. The plan(s) shall address fugitive dust control at the WTP construction site adjacent to the Hanford 200 Area and the Marshaling Yard established upon property leased from the Port of Benton. A copy of this plan(s) shall be maintained on-site at all times in a place known to facility employees that are responsible for complying with the requirements contained therein and shall be retrievable by those employees at all times when activities regulated by the documents are occurring. These documents shall be made available to Ecology upon request.

Periodic Monitoring: Not applicable. The owner or operator shall take reasonable precautions (such as pre-job planning) to prevent fugitive dust from becoming airborne.

Test Method: Construction Phase Fugitive Dust Control Plan

Test Frequency: During construction or routine/ad hoc dust suppression

Required Records: Fugitive Dust Control Plan and records of actions taken to minimize fugitive dust

State-Only: No.

Calculation Model: Not applicable.

Condition Approval 11/24/2003

Condition: 1.3 Opacity from each exhaust stack from process facilities (Pretreatment, HLW, and LAW) shall not exceed 5%, other facility stacks shall not exceed 10 percent, over a 6 minute average as measured by EPA Reference Method 9 of 40 CFR 60, Appendix A, or an equivalent method approved in advance by Ecology. A certified opacity reader shall read and record the opacity concurrent with any source testing.

Periodic Monitoring: For Pretreatment, HLW, and LAW, See Section 2.1, Tier 3.

Test Frequency: Initial test.

Required Records: Test Records.

State-Only No.

Calculation Model Not applicable.
**Condition Approval 11/24/2003**

State-Only No.
Calculation Model Not applicable.

Condition Approval 4/4/2013

Condition: 2.5; PSD-02-01 Cond. 15 Each of the diesel fire pumps shall not operate for more than 230 hours per year on a 12 month rolling summation calculated once per month. Compliance shall be monitored by installing and operating a non-resettable totalizer on the fire pump.

Periodic Monitoring: Recordkeeping.
Test Method: Not Specified.
Test Frequency: Not Applicable.
Required Records: Monthly.
State-Only No.
Calculation Model Not applicable.
Condition Approval 11/24/2003

Condition: 2.2 A new NOC will be required, if total emissions of toxic air pollutants exceed the values specified in the tables in Attachment 1. These values shall be confirmed by emission calculations, for indicator constituents, derived from waste characterization data obtained through implementation of the Ecology approved Regulatory Data Objectives Supporting Tank Waste Remediation System Privatization Project (PNNL-12040). The mass feed rates for the indicator constituents will be verified to be less than or equal to the mass feed rates used in the Integrated Emissions Baseline Report for the Hanford Tank Waste Treatment and Immobilization Plant (24590-WTP-RPT-PO-03-008, Rev. 0). Results of any such calculations will be maintained on file and made available upon inspection/request.

Periodic Monitoring: Recordkeeping
Test Method: Not Specified.
Test Frequency: At least once per calendar year.
Required Records: 1. Calculations of TAPs emissions derived from waste feed characterization.
2. Calculations of ammonia emissions from LAW and HLW.
State-Only: Yes.
Calculation Model: Not applicable.

Condition Approval 7/8/2002

Condition: 2.3 A new NOC also is required if total emissions of any criteria pollutants, derived from calculations/monitoring, would exceed the estimates listed under the Emissions section of this order.

Periodic Monitoring: Recordkeeping
Test Method: Not Specified.
Test Frequency: At least once per calendar year.
Required Records: Calculations of criteria pollutants.
State-Only: Yes.
Calculation Model: Not applicable.
Condition Approval 11/24/2003

Condition: 3.1; PSD-02-01 Conditions 3.2, 4.2, 5.2, 6.2, and 7.2. Within 180-days of achieving the optimized feed rate of simulant at which the facilities will be operated, the permittee shall demonstrate initial compliance through a performance demonstration conducted per an Ecology approved Performance Demonstration Plan. The permittee shall utilize the Performance Demonstration Plan requirements identified in the Dangerous Waste Portion of the Resource Conservation and Recovery Act Permit for the Treatment, Storage, and Disposal of Dangerous Waste Hanford Tank Waste Treatment and Immobilization Plant (DWP), condition III.10.H.5.f (LAW) and III.10.J.5.f (HLW). Ecology shall be notified at least 30 days prior to the test and invited to participate in the test activities at least one week prior to testing.

Periodic Monitoring: Recordkeeping.

Test Method: Not specified.

Test Frequency: Not applicable.

State-Only: Yes.

Calculation Model: Not applicable.

Condition Approval 11/24/2003

Condition: 3.2 Testing per the initial compliance testing identified in 3.1 shall be conducted in accordance with the frequency identified in the DWP, condition III.10.I.1.h (LAW) and II.10.K.1.h (HLW).

Periodic Monitoring: Recordkeeping, measurements, and emission calculations.

Test Method: As stated in DWP conditions III.10.I.1.h (LAW) and III.10.K.1.h (HLW).

Test Frequency: At startup and at least once every 5 years thereafter.

Required Records: Test records.

State-Only: Yes.

Calculation Model: Not applicable.
1 Condition Approval 11/24/2003; 11/12/03 (PSD)

2 Condition: 3.5; PSD-02-01 Conditions 3-7, 9-10, 12, 14 Within 180 days of initial startup, boiler, emergency generator, and process facility source testing shall be conducted according to the following methods, unless an alternate method has been proposed in writing by the permittee and approved by Ecology in writing in advance of the testing.

7 Periodic Monitoring: Recordkeeping, measurements, and emission calculations.
8 Test Method: As stated in condition.
9 Test Frequency: Initial startup and every 5 years thereafter.
10 Required Records: Test Records.
11 State-Only No.
12 Calculation Model Not applicable.
Condition Approval 11/24/2003

Condition: 3.6 During the boiler source testing, a direct-reading measurement device for carbon monoxide with a minimum measurement accuracy of five percent or less shall take readings according to methods proposed by the permittee and approved by Ecology in writing in advance of the testing. The direct-reading instrument shall be calibrated for future use, using the results of the source testing.

Periodic Monitoring: Recordkeeping, measurements, and emission calculations.

Test Method: Portable emissions analyzer calibrated during most recent source test.

Test Frequency: Initial startup.

Required Records: Logs of boiler tune-ups and significant boiler maintenance activities will be maintained.

State-Only: Yes.

Calculation Model: Not applicable.

Condition Approval 11/24/2003

Condition: 4. Emissions from boilers and generators shall be monitored for CO, and Oxygen by means of a portable emissions analyzer (direct-reading measurement device) at initial startup and after routinely scheduled maintenance activities and burner/control adjustments such as fuel/air metering ratio control and oxygen trim control.

Periodic Monitoring: Recordkeeping, measurements, and emission calculations.

Test Method: Portable emissions analyzer calibrated during most recent source test.

Test Frequency: Initial startup and after routinely scheduled maintenance activities and burner/control adjustments such as fuel/air metering ratio control and oxygen trim control.

Required Records: Logs of boiler tune-ups and significant boiler maintenance activities will be maintained.

State-Only: Yes.

Calculation Model: Not applicable

Discharge Point: Integrated Disposal Facility (IDF)

200E, General Standards

Requirement Citation
(WAC or Order Citation): WAC 173-400-040(9)(a), DE05NWP-004

Condition Approval: 05/31/2005
Condition: FUGITIVE DUST
Requires reasonable precautions be taken to prevent fugitive dust from becoming airborne and to minimize dust generation.
Periodic Monitoring: Pre-job planning to determine reasonable control measures.
Test Method: Not specified.
Test Frequency: Not applicable.
Required Records: None listed.
State-Only: No.
Calculation Model: Not applicable.

Condition Approval: 05/31/2005
Condition: FUGITIVE EMISSIONS
The permittee shall take reasonable precautions to prevent the release of air contaminants from any emissions unit engaging in materials handling, construction, demolition, or any other operation that is a source of fugitive emissions.
Periodic Monitoring: Pre-job planning to determine reasonable control measures.
Test Method: Not specified.
Test Frequency: Not applicable.
Required Records: None listed.
State-Only: No.
Calculation Model: Not applicable.
1 **Condition Approval:** 05/31/2005
2 Condition: EMISSION LIMITS FOR WASTE COVERING OPERATIONS
3 During waste covering operations, aggregate, a mixture of minerals, sand
4 and soil, will be used to cover the waste package at the IDF. Dust control
5 for covering the waste package will consist of watering and/or chemical
6 wetting agents. Waste covering operations will be curtailed during high
7 winds in accordance with abnormal operating procedures for high winds.
8 Prior to long periods of inactivity, an assessment shall be made to
9 implement more comprehensive dust control methods, such as chemical
10 stabilization, on disturbed areas. A reassessment will be made once per
11 week.
12 Periodic Monitoring: Recordkeeping.
13 Test Method: Not specified.
14 Test Frequency: Not applicable.
15 Required Records: Daily activity reports, logs, pre-job reviews, management assessments,
16 surveillances or similar documents.
17 State-Only: Yes.
18 Calculation Model: Not applicable.
19 **Condition Approval:** 05/31/2005
20 Condition: EMISSION LIMITS FOR TRAVEL ON UNPAVED ROADS
21 Surface treatment for dust control will consist of watering and/or
22 chemical stabilization. Minimize vehicle use on unpaved road. Perform
23 regular maintenance of road surface. Reduce vehicle speed limit on
24 unpaved roads.
25 Periodic Monitoring: Recordkeeping
26 Test Method: Not specified
27 Test Frequency: Not applicable.
28 Required Records: Daily activity reports, logs, pre-job reviews, management assessments,
29 surveillances or similar documents.
30 State-Only: Yes
31 Calculation Model: Not applicable
Condition Approval: 05/31/2005

Condition: EMISSION LIMITS FOR AGGREGATE COVER COMPACTING ACTIVITIES

A water truck will be provided, and operated as needed to spray water for compaction. Waste covering operations will be curtailed during high winds in accordance with abnormal operating procedures for high winds. Prior to long periods of inactivity an assessment shall be made to implement more comprehensive dust control methods, such as chemical stabilization, on disturbed areas. A reassessment will be made once per week.

Periodic Monitoring: Recordkeeping.
Test Method: Not specified.
Test Frequency: Not applicable.
Required Records: Daily activity reports, logs, pre-job reviews, management assessments, surveillances or similar documents.
State-Only: Yes.
Calculation Model: Not applicable.

Condition Approval: 05/31/2005

Condition: EMISSION LIMITS FOR AGGREGATE STORAGE PILE

Watering will be utilized to minimize wind erosion during storage pile operation. Storage pile work will be curtailed during high winds in accordance with abnormal operating procedures for high winds. Prior to long periods of inactivity, an assessment shall be made to implement more comprehensive dust control methods, such as chemical stabilization, on disturbed areas. A reassessment will be made once per week. Minimize vehicle traffic. Minimize areas of disturbance.

Periodic Monitoring: Recordkeeping.
Test Method: Not specified.
Test Frequency: Not applicable.
Required Records: Daily activity reports, logs, pre-job reviews, management assessments, surveillances or similar documents.
State-Only: Yes.
Calculation Model: Not applicable.
Discharge Point: Ventilation Systems for 241-AN and 241AW-Tank Farms

200E, Tank Farms – Ventilation Systems for 241-AN and 241 AW Tank Farms

Requirement Citation (WAC or Order Citation): WAC 173-400-040(2), DE05NWP-001 (2/18/2005), Rev 1 (7/31/2007), and Amendment A (3/26/2013)

Condition Approval: 2/18/2005 (DE05NWP-001)

Condition: EMISSION LIMITS

Visible emissions from each stack shall not exceed five (5) percent.

Periodic Monitoring: Compliance and monitoring shall be met by Tier 3 Visible Emissions Survey requirements of the Hanford AOP, Section 2.1. Should visible emissions be observed which are not solely attributable to water condensation, compliance shall be met by performing an opacity determination utilizing 40 CFR 60, Appendix A, Method 9, providing that such determination shall not place the visible emission observer in hazard greater than that identified for the general worker.

Test Method: 40 CFR 60, Appendix A, Method 9, as applicable.

Test Frequency: None Specified (as needed for monitoring and compliance)

Required Records: Visible emission surveys records in which a visible emission was observed, which are not solely attributable to water condensation; and Method 9 results, if conducted.

State-Only: No.

Calculation Model: Not applicable.

Condition Approval: 2/18/2005 (DE05NWP-001)

Condition: EMISSION LIMITS

Primary tank ventilation exhauster systems shall not exceed 4,000 ft³/min (at standard temperature and pressure).

Periodic Monitoring: Compliance and monitoring of this condition shall be demonstrated by stack gas flow and temperature measurement.

Test Method: Not specified.

Test Frequency: None Specified (as needed for monitoring and compliance).

Required Records: (1) Records of exhauster system stack flow rates and temperature records.

(2) Records of calibration of stack gas flow rate and temperature measurement devices.

State-Only: No.

Calculation Model: Not applicable.
**Condition Approval: 7/31/2007 (DE05NWP-001 Rev 1) and 3/26/2013 (Amd A)**

**Condition:** EMISSION LIMITS

All TAPs, as shown in Table 2 of Approval Order DE05NWP-001, Rev 1 and Amd A, shall be below their respective ASIL or Screening Level of Table 1 of Approval Order DE05NWP-001 Rev 1.

**Periodic Monitoring:** Compliance and monitoring shall be met by operating the exhauster systems only when in accord with T-BACT emission controls for the project. T-BACT for this project has been determined to be operation of the primary tank ventilation exhauster systems not exceeding 4,000 cubic feet per minute with moisture de-entrainment, pre-heater, and HEPA filtration in service in the treatment train.

**Test Method:** Not specified.

**Test Frequency:** None Specified (as needed for monitoring and compliance).

**Required Records:** Documentation and record-keeping of T-BACT compliance of emission control found for this project (operation of the primary tank ventilation exhauster system not exceeding 4,000 ft³/min with moisture de-entrainment, pre-heater, and HEPA filtration in service in the treatment train).

**State-Only:** Yes.

**Calculation Model:** Not applicable.
**Condition Approval: 3/26/2013 (DE05NWP-001 Amd A)**

**Condition:** EMISSIONS LIMITS

Emissions of ammonia shall not exceed 2.9 pounds per hour (3.63E-01 gram/second) from either primary tank ventilation exhauster system. The term ‘either exhauster system’ shall mean each individual primary tank ventilation exhauster system within the 241-AN and 241-AW Tank Farms, where an exhauster system may be operated in single-train or dual-train modes.

**Periodic Monitoring:** Conduct of ammonia concentration readings and apply these concentration readings with contemporaneous stack flow rate and temperatures to determine instantaneous mass release rate of ammonia.

**Test Method:** Ammonia sampling and analysis will be in accord with approved alternative sampling procedures including the use of Draeger tubes to measure stack gas concentration of ammonia providing such devices are spanned to appropriately measure the stack gas ammonia concentration. Stack flow rate and temperature will be applied with the ammonia stack gas concentration to report ammonia emission in terms of grams per second.

**Test Frequency:** In order to assess baseline emission concentrations from each exhauster system, emission levels of ammonia will be assessed between 12 and 24 hours after initiation of exhauster operation (single train or duel train). Ammonia stack concentrations shall be sampled a minimum of three times.

**Baseline Assessments** Baseline assessments shall be conducted within ninety (90) days of commencement of operations. Should dual exhauster train operation not be required by the Permittee during this ninety (90) day period, assessment of dual train operation emissions shall be conducted on the first occasion of dual train operation which is anticipated to exceed 24 hours duration.

**Bi-Annual Assessment** In order to maintain reasonable assurance of continued compliance with emission limitations from these exhauster systems, bi-annual assessment of ammonia stack emissions will be conducted beginning the second calendar year following completion of single train exhauster operation assessment. A minimum of three samples shall be used to assess these emissions.

**Required Records:** Results of emission assessments, baseline and bi-annual emission monitoring results, supporting data and calculations to demonstrate compliance with ammonia limits.

**State-Only:** Yes.

**Calculation Model:** Not applicable.
Condition Approval: 2/18/2005 (DE05NWP-001)

Condition: REPORTING

Visible emission surveys conducted and a report of the maintenance conducted to maintain the subject exhaust system’s T-BACT operations shall be submitted to Ecology within 30 days of completion of the survey with an assessment of the cause of visible emissions.

Periodic Monitoring: Compliance of this condition is met by submitting to Ecology within thirty (30) days of completion of the survey with an assessment of the cause of visible emissions.

Test Method: Not specified.

Test Frequency: Not applicable.

Required Records: Visible emission surveys conducted and a report of the maintenance.

State-Only: No.

Calculation Model: Not applicable

Condition Approval: 2/18/2005 (DE05NWP-001)

Condition: REPORTING

Identification of any TAP not previously identified within the Notice of Construction Application or Supplement emissions estimates shall be submitted to Ecology within ninety (90) days of completion of laboratory analyses which verify emissions of that toxic air pollutant from the project.

Periodic Monitoring: Compliance of this condition is met by submitting to Ecology within ninety (90) days of completion of laboratory analyses which verify emissions of that toxic air pollutant from the project.

Test Method: Not specified.

Test Frequency: Not applicable.

Required Records: Laboratory analysis.

State-Only: No.

Calculation Model: Not applicable

Condition Approval: 2/18/2005 (DE05NWP-001)

Condition: REPORTING

Results of emission assessments conducted shall be submitted to Ecology within 90 days of completion of the assessment.

Periodic Monitoring: Compliance of this condition is met by submitting to Ecology within ninety (90) days of completion of such assessment.

Test Method: Not specified.

Test Frequency: Not applicable.

Required Records: Emission assessment results.

State-Only: No.
Calculation Model: Not applicable
**Discharge Point:** 200 Area SST Categorical Waste Retrieval

200 Area SST Categorical Waste Retrieval

Requirement Citation (WAC or Order Citation): WAC 173-400-040(2), DE05NWP-002 (2/18/2005), Rev. 1 (10/12/2005), and Rev 2 (7/31/2007).

**Condition Approval:** 2/18/2005 (DE05NWP-002)

**Condition:** EMISSION LIMITS

Visible emissions from each tank ventilation exhauster stack or aggregated exhauster stack shall not exceed five percent.

**Periodic Monitoring:** Compliance and monitoring shall be met by Tier 3 Visible Emissions Survey requirements of the Hanford AOP, Section 2.1. Should visible emissions be observed which are not solely attributable to water condensation, compliance shall be met by performing an opacity determination utilizing 40 CFR 60, Appendix A, Method 9, providing that such determination shall not place the visible emission observer in hazard greater than that identified for the general worker.

**Test Method:** 40 CFR 60, Appendix A, Method 9, as applicable.

**Test Frequency:** None Specified (as needed for monitoring and compliance)

**Required Records:** Visible emission surveys records in which a visible emission was observed, which are not solely attributable to water condensation; and Method 9 results if conducted.

**State-Only:** No.

**Calculation Model:** Not applicable.
Condition Approval: 2/18/2005 (DE05NWP-002)

Condition: EMISSION LIMITS

Tank ventilation exhauster systems for the 241-C SST farm 100 series tank (241-C-101 through 241-C-112) shall not exceed cumulative flow rates of 7,000 ft³/min (at standard temperature and pressure) for three exhausters individually limited to 1,000 ft³/min, 3,000 ft³/min, and 3,000 ft³/min, respectively (at standard temperature and pressure).

Periodic Monitoring: Compliance and monitoring of this condition shall be demonstrated by stack gas flow and temperature measurement.

Test Method: Not specified.

Test Frequency: None Specified (as needed for monitoring and compliance).

Required Records: (1) Records of exhauster system stack flow rates and temperature records.

(2) Records of calibration of stack gas flow rate and temperature measurement devices.

State-Only: No.

Calculation Model: Not applicable.

Condition Approval: 2/18/2005 (DE05NWP-002)

Condition: EMISSION LIMITS

SST ventilation exhauster systems for the retrieval of wastes other than those of the 241-C tank farm 100 series tanks shall not exceed 1,000 ft³/min (at standard temperature and pressure).

Periodic Monitoring: Compliance and monitoring of this condition shall be demonstrated by stack gas flow and temperature measurement.

Test Method: Not specified.

Test Frequency: None Specified (as needed for monitoring and compliance).

Required Records: (1) Records of exhauster system stack flow rates and temperature records.

(2) Records of calibration of stack gas flow rate and temperature measurement devices.

State-Only: No.

Calculation Model: Not applicable.
**Condition Approval: 7/31/2007 (DE05NWP-002, Rev 2)**

**Condition:** EMISION LIMITS

All TAPs, as submitted in the permittee’s NOC Applications, shall be below their respective ASIL or Screening Level of Table 1 in Approval Order DE05NWP-002, Rev 2.

**Periodic Monitoring:** Compliance and monitoring with this condition shall be met by:

1. Operating the exhauster systems only when in accord with T-BACT emission controls found for this project (operation of the tank ventilation exhauster systems with moisture de-entainment, pre-heater, and HEPA filtration in service in the treatment train).

2. Development and implementation of a sampling and analysis plan (SAP) for each tank retrieval. For each retrieval, the SAP shall address the emission of a minimum of the three TAPs with the higher potential ambient concentration relative to their ASILs of WAC 173-460-150 and WAC-173-460-160 or relative to their Screening Level of Table 1 of the Approval Order DE05NWP-002, Rev 2. The TAPs addressed in the SAP shall be identified from Table 2 of the Approval Order DE05NWP-002, Rev 2, and based upon best engineering judgment and most current tank content data. Analytical methods for the analysis shall be the United States EPA, OSHA, or NIOSH approved, or by approved equivalent method.

**Test Method:** Not specified.

**Test Frequency:** None specified (as needed for monitoring and compliance).

**Required Records:**

1. All monitoring and operations records required to operate and maintain the emission control equipment which implements T-BACT as required in Periodic Monitoring above.

2. SAPs developed for compliance demonstration as described in Periodic Monitoring above.

3. Laboratory analysis result summaries of any samples undertaken after the effective date of the Approval Order DE05NWP-002, Rev 2, from SST tank farm tank headspaces or SST ventilation system exhaust which are examined for organic species or other TAPs.

**State-Only:** Yes.

**Calculation Model:** Not applicable.
**Condition Approval: 2/18/2005 (DE05NWP-002)**

**Discharge Point**  
E-85 Fuel Station

200E Area, E-85 Automotive Fuel Tank and Dispensing Facility

Requirement Citation (WAC or Order Citation): DE06NWP-001 (4/17/2006)

**Condition Approval 4/17/2006**

**Condition:** Emission Limits

A. Emissions of Volatile Organic Compounds shall not exceed 40 tons per year.

B. All TAPs, as submitted in the Permittee’s NOC Application, shall be below their respective ASIL.

**Periodic Monitoring:** Record fuel storage tank loading of the E-85 fuel and verify NOC Condition 1.6 requirements for each load received.

**Test Method:** Compliance of the approval condition shall be demonstrated by installation of BACT and T-BACT emission controls including (1) submerged or bottom fill pipe such that the pipe inlet is fully submerged when the fluid level in the tank is six inches (15.2 cm) or greater, and (2) fitting to vapor balance gasoline vapors with the delivery transport tank.

**Test Frequency:** Not applicable (maintenance records).

**Required Records:** Retention of fuel storage tank loading records detailed in NOC (DE06NWP-001) Approval Condition 1.6.

**State-Only** No:

**Calculation Model** Not applicable.
**Discharge Point:**  HAMMER Training and Education Facility

Volpentest Hazardous Materials Management and Emergency Response (HAMMER) Training and Education Facility (2890 Horn Rapids Road, Richland, Washington)

Requirement Citation (WAC or Order Citation): DE07NWP-001

**Condition Approval:** 4/19/2007

| Condition: Visible emissions from training operations shall not exceed twenty (20) percent opacity. [WAC 173-400-040(2)] |
| Periodic Monitoring: Tier 2 Visible Emissions Survey requirements of the Hanford Air Operating Permit if visible emissions from training operations materials, other than those from “fog machines,” are exhibited outside training structures. |
| Test Method: Tier 2 Visible Emissions Survey requirements Section 2.1 of the Hanford AOP, Attachment 1 and/or EPA Method 9 of 40 CFR 60, Appendix A. |
| Test Frequency: Once per year, if visible emissions are observed (see Periodic Monitoring). |
| Required Records: Records of Tier 2 visible emission event surveys including EPA Method 9 results. |
| State-Only: No. |
| Calculation Model: Not applicable. |

**Condition Approval:** 4/19/2007

| Condition: Fugitive emissions from training operations shall be minimized. [WAC 173-400-040(4)(a)] |
| Periodic Monitoring: Use of operating procedures: (1) keep containers closed when not in use, and (2) ensure proper handling and storage to minimize unintentional losses. |
| Test Method: Not specified. |
| Test Frequency: Not applicable. |
| Required Records: Records of (1) fugitive release control procedure training, and (2) events which detail non-compliance with fugitive release control procedures or unintentional releases and response to such events. |
| State-Only: No |
| Calculation Model: Not applicable. |
**Condition Approval: 4/19/2007**

Condition: Particulate Matter emissions from training materials shall not exceed 1,500 pounds per year (lb/yr). [WAC 173-400-110(5)(b)]

Periodic Monitoring: Material record keeping.

Test Method: Not applicable.

Test Frequency: Not applicable.

Required Records: Material balance records which detail materials receipt and disposal, with a summary assessment of losses calculated each calendar quarter.

State-Only: No.

Calculation Model: Not applicable.

**Condition Approval: 4/19/2007 (DE07NWP-001)**

Condition: Volatile Organic Compound (VOC) emissions from training materials shall not exceed 4,000 pounds per year (lb/yr). [WAC 173-400-110(5)(b)]

Periodic Monitoring: Materials record keeping.

Test Method: Not applicable.

Test Frequency: Not applicable.

Required Records: Material balance records which detail materials receipt and disposal with a summary assessment of losses, calculated each calendar quarter.

State-Only: No.

Calculation Model: Not applicable.

**Condition Approval: 4/19/2007 (DE07NWP-001) and 7/31/2007 (Amendment 1)**

Condition: Emissions of all TAPs, as identified in Table 1 of NOC Order DE07NWP-001 (4/19/2007) and Amendment 1 (7/31/2007), or newly identified, shall be below their respective SQERs. [WAC 173-460-150]

Periodic Monitoring: Materials record-keeping.

Test Method: Not applicable.

Test Frequency: Not applicable.

Required Records: Material balance records which detail materials receipt and disposal with a summary assessment of losses, calculated each calendar quarter. Emission of any TAP exceeding SQERs detailed in Table 1 of Order DE07NWP-001 shall be reported to Ecology in accord with WAC 173-400-107. Identification of any TAP not previously identified within Order DE07NWP-001, shall be submitted to Ecology within 90 days of initiation of use in training with an estimate of annual emissions.

State-Only: Yes.

Calculation Model: Not applicable.
**Discharge Point**  100B-181B/182B

100 Area, Emergency Diesel Engines

Requirement Citation (WAC or Order Citation): DE07NWP-002

**Condition Approval**  6/27/2007

Condition: (1) Visible emissions will not exceed 20 % during acceleration mode [WAC 173-400-040(2), 40 CFR §60.4205(b), and 40 CFR §89.113(a)(1)].

(2) Visible emissions will not exceed 15 % during lugging mode [40 CFR §60.4205(b), and 40 CFR §89.113(a)(2)].

(3) Visible emissions will not exceed 50 % during peak in either acceleration or lugging mode. [WAC 173-400-040(2)(a), 40 CFR §60.4205(b), and 40 CFR §89.113(a)(3)].

**Periodic Monitoring:** Use Tier 1 Visible Emission Survey (Section 2.1 of AOP Attachment 1), unless otherwise specified (see Test Frequency below).

**Test Method:** Tier 1 Visible Emissions Survey and EPA Method 9 (40 CFR §60, App. A).

**Test Frequency:** Each engine authorized by this order shall be surveyed for visible emissions during maintenance and readiness testing and emergency-use based upon the following frequency or events:

(1) During maintenance and readiness testing, a visible emission survey shall be conducted with each readiness test startup,

(2) During emergency-use operations exceeding, or anticipated to exceed, eight hours duration, a visible emissions survey shall be conducted daily,

(3) Visible emissions of each engine shall be determined by procedures detailed in 40 CFR 86 Subpart I (40 CFR §86.884 et seq.) within 90 days of initial startup and as required by Ecology.

**Required Records:** Results of visible emissions survey and EPA Method 9 tests conducted pursuant to periodic monitoring.

**State-Only**  No.

**Calculation Model**  Not applicable.
**Condition Approval 6/27/2007**

**Condition:** Emissions of Polyaromatic Hydrocarbons (PAHs) will not result in ambient concentrations exceeding 4.8E-04 µg/m³ [WAC 173-460-080(2)].

**Periodic Monitoring:** Compliance will be demonstrated by calculation of the sum of PAH TAP emissions from all engines employing air pollution emission factors of AP 42, Table 3.3-2, for engines less than 600 HP, and AP-42, Table 3.4-4, for engines 600 HP and higher.

**Test Method:** Not applicable.

**Test Frequency:** Not applicable.

**Required Records:** Calculations and dispersion analyses prepared semiannually in concert with cumulative operating hour calculations, retained for a minimum of 36 months. AP 42, fifth edition, shall be used for the calculation.

**State-Only** Yes.

**Calculation Model** Not applicable.

---

**Condition Approval 6/27/2007**

**Condition:** Emissions of Toxic Air Pollutants (TAPs), as identified in the table below, will not exceed SQERs of WAC 173-460-080(2)(e).

**Periodic Monitoring:** Compliance will be demonstrated by calculation of the sum of TAP emissions from all engines employing air pollution emission factors of AP 42, Table 3.3-2, for engines less than 600 HP, and AP-42, Table 3.4-3, for engines 600 HP and higher.

**Test Method:** Not applicable.

**Test Frequency:** Not applicable.

**Required Records:** Calculations and dispersion analyses prepared semiannually in concert with cumulative operating hour calculations, retained for a minimum of 36 months. AP 42, fifth edition, shall be used for the calculation. Table 3.4-3 of AP-42 does not estimate emissions of 1,3-Butadiene for larger engines. An emission factor of zero shall be applied to 1,3-Butadiene for engines 600 HP or larger.

**State-Only** Yes.
Calculation Model  Not applicable.

**Condition Approval 6/27/2007**

Condition: Emissions of sulfur dioxide will not exceed two tons per year [WAC 173-400-110(5)(b)].

Periodic Monitoring: Compliance will be demonstrated by use of fuel containing (1) no greater than 0.05 weight percent sulfur (500 parts per million by weight) from installation to May 30, 2010 [40 CFR §60.4207(a), 40 CFR §80.510(a)], and (2) no greater than 0.0015 weight percent sulfur (15 parts per million by weight) on and after June 1, 2010 [40 CFR §60.4207(b), 40 CFR §80.510(b)].

Test Method: Not applicable.

Test Frequency: Not applicable.

Required Records: Diesel fuel quality shall be documented by annual fuel analysis or vendor documentation of fuel purchases from retail outlet(s) that demonstrate compliance with diesel fuel quality standards of 40 CFR §80.510 for all purchases.

State-Only  No.

Calculation Model  Not applicable.
**Condition Approval 6/27/2007**

**Condition:** Emissions of Nitrogen Oxides (NO\textsubscript{x}) and Non-methane Hydrocarbons (NMHC) will not exceed 14.2 tons per year. [WAC 173-400-091, AP 42 emission factors for engines in NOC application operating 500 hours per year].

Emissions of Carbon Monoxide (CO) will not exceed 5 tons per year. [WAC 173-400-110(5)(b)].

Emissions of particulate matter (PM) will not exceed 0.75 tons per year. [WAC 173-400-110(5)(b)].

**Periodic Monitoring:** Compliance will be demonstrated by

(A) Engine Limitation

(1) Installation of engines certified to meet emission limitations of 40 CFR §89 [40 CFR §60.4211(c)], and

(2) Installation of one engine rated no higher than 450 horsepower (HP) and two engines rated no higher than 900 HP each; and

(B) Operational Limitation

(1) All recommended operation and equipment maintenance provisions supplied by the manufacturer(s) of the engine(s) will be current [40 CFR §60.4211(a)],

(2) Operational monitoring in accord with installed non-resettable hour meter on each engine [40 CFR §60.4209(a)],

(3) Operational hours of use for each engine, for purposes of maintenance checks and readiness testing shall not exceed 100 hours per year unless approved by the Administrator of the United States Environmental Protection Agency [40 CFR §60.4211(e)], and

(4) Operational hours of use during emergency conditions shall not be limited provided maintenance of records of emergency use are consistent with Required Records below.

**Test Method:** Not applicable.

**Test Frequency:** Not applicable.

**Required Records:**

(1) Manufacturer’s engine certifications,

(2) Maintenance records, and

(3) Records of cumulative operating hours for each engine, calculated semiannually, retained for a minimum of 36 months

**State-Only**

No.

**Calculation Model**

Not applicable.
Condition Approval 6/27/2007

Condition: Emission rates of installed engines shall not exceed values identified in the table below [40 CFR §60.4205(b) and 40 CFR §89.112].

Periodic Monitoring: Compliance shall be demonstrated by:

1. Procuring and installing only engines certified to emission standards of 40 CFR §60.4205(b) for the same model year and maximum engine rating [40 CFR §60.4211(c)].
2. Operating and maintaining the stationary compression ignition internal combustion engines and control devices according to the manufacturer’s written instructions or procedures developed by the owner or operator that are approved by the engine manufacturer [40 CFR §60.4211(a)].
3. Installing and configuring the engines according to manufacturer specifications [40 CFR §60.4211(c)].
4. Maintaining records of engine certification as detailed in the Required Records below.

Test Method: Not applicable.
Test Frequency: Not applicable.
Required Records: (1) Manufacturer’s engine certifications.
2. Records of cumulative operating hours for each engine, calculated semi-annually, will be retained for a minimum of 36 months.
3. Records of emergency use operational duration and the basis of the emergency.

State-Only: No.
Calculation Model: Not applicable.
**Discharge Point**  
**WTP Heaters and Dehumidifiers**

200 Area, Hanford Tank Waste Treatment and Immobilization Plant (WTP)

**Requirement Citation (WAC or Order Citation):**  

**Condition Approval 11/21/2007**

**Condition:**  
Emission Limits

(1) Total Suspended Particulates emission shall not exceed 1.25 tons per year [WAC 173-400-110(5)(b)].

(2) PM-10 particulate emission shall not exceed 0.75 tons per year [WAC 173-400-110(5)(b)].

**Periodic Monitoring:**  
Compliance shall be monitored by:

(1) Emission of visible emissions of no more than five percent opacity during normal operation of diesel-fired heaters.

(2) Diesel-fired heaters exceeding five percent opacity shall be removed from operation until maintenance of the unit results in visible emissions in compliance (no more than 5%).

(3) Compliance with visible emissions survey requirements of Approval Condition 3.0 of the Approval Order DE07NWP-004. Visible emissions (VE) from diesel-fired heaters in normal operation (not start-up or shut-down) will be monitored through a VE survey described herein. A minimum representation of 20 percent of active diesel-fired heaters under this ORDER shall be subject to VE survey. If VEs from one of these emission units are observed for more than 10 consecutive minutes, an attempt to identify the cause(s) of the VEs will be made and those results recorded. The recorded entry also will identify any corrective actions taken and the likely frequency of a future reoccurrence. If the event is likely to be re-occurring, and can not be demonstrated to consist of water vapor, a determination of opacity will be made using EPA Method 9 of 40 CFR 60, Appendix A. A VE survey shall be conducted weekly for a period of three months. If weekly VE surveys do not demonstrate emissions in excess of Approval Condition 1.3.1, the VE survey frequency will reduce to once every three months for a period of six months. After nine months of no excess visible emissions, visible emission surveys will be performed for any diesel-fired heater subject to this ORDER only when visible emissions are observed during normal operation.

**Test Method:**  
VE Surveys and/or EPA Method 9 of 40 CFR 60, Appendix A (if needed).

**Test Frequency:**  
Not specified.

**Required Records:**  
(1) VE Surveys and/or EPA Method 9 of 40 CFR 60, Appendix A, results.

(2) Maintenance records for any diesel-fired heater removed from service.

**State-Only**  
No.

**Calculation Model**  
Not applicable.
**Condition Approval 11/21/2007**

**Condition:** Emission Limits

Sulfur Oxides (SO\(_x\)) emission shall not exceed 2.0 tons per year [WAC 173-400-110(5)(b)].

**Periodic Monitoring:** Compliance shall be monitored by:

1. Combustion of distillate fuel oil No. 2 with a sulfur content no greater than 0.0015 wt percent (15 ppm) for diesel heaters.
2. Combustion of no greater than 933,100 gallons of distillate fuel oil per year, based upon a daily rolling summation.

**Test Method:** Record-keeping.

**Test Frequency:** Per daily rolling summation and/or fuel shipment.

**Required Records:** Fuel analysis data and consumption rates, including supporting data and calculations.

**State-Only** No.

**Calculation Model** Not specified.

**Condition Approval 11/21/2007**

**Condition:** Emission Limits

1. Nitrogen Oxides (NO\(_x\)) emission shall not exceed 16.2 tons per year [WAC 173-400-110(2)(a)].
2. Total Volatile Organic Compounds emission shall not exceed 2.0 tons per year [WAC 173-400-110(5)(b)].
3. Carbon Monoxide emissions shall not exceed 5.0 tons per year [WAC 173-400-110(5)(b)].
4. Toxic Air Pollutant (TAP) emissions as specified in Table 1 of Approval Order DE07NWP-004 [WAC 173-460-070].

**Periodic Monitoring:** Compliance shall be monitored by:

1. Operation in compliance with BACT/T-BACT (implementation of vendor-recommended combustion and maintenance practices).
2. Fuel Limitation: (a) combustion of no greater than 933,100 gallons of distillate fuel oil per year, based upon a daily rolling summation, and (b) combustion of no greater than 1,109,500 gallons of propane per year, based upon a daily rolling summation.

**Test Method:** Record-keeping.

**Test Frequency:** Per daily rolling summation and/or fuel shipment.

**Required Records:** Fuel analysis data and consumption rates, including supporting data and calculations.

**State-Only** No.

**Calculation Model** Not specified.
Discharge Point  300 Area/339A

300 Area Building 339A, Emergency Diesel Engine

Requirement Citation (WAC or Order Citation): DE08NWP-001

Condition Approval 9/24/2008

Condition: Visible emissions will not exceed 20 %. [WAC 173-400-040(2)].

Periodic Monitoring: Use Tier 1 Visible Emission Survey (Section 2.1 of AOP Attachment 1), unless otherwise specified.

Test Frequency: The engine authorized by this order shall be surveyed daily for visible emissions during emergency-use exceeding, or anticipated to exceed, eight hours duration.

Required Records: Results of visible emissions survey and EPA Method 9 tests conducted pursuant to periodic monitoring.

State-Only No.

Calculation Model Not applicable.
**Condition Approval 9/24/2008**

Conditions:

1. Emissions of Nitrogen Oxides (NOx) will not exceed 1.25 tons per year. [WAC 173-400-091 operating 500 hours per year].
2. Emissions of Carbon Monoxide (CO) will not exceed 5 tons per year. [WAC 173-400-110(5)(b)].
3. Emissions of particulate matter (PM) will not exceed 0.75 tons per year. [WAC 173-400-110(5)(b)].
4. Emissions of volatile organic compounds (VOC) will not exceed 2 tons per year. [WAC 173-400-110(5)(b)].

Periodic Monitoring: Compliance will be demonstrated by

(A) Engine Limitation

1. Installation of one engine rated no higher than 350 horsepower (HP).

(B) Operational Limitation

1. Operational monitoring in accord with installed non-resettable hour meter on the approved engine [40 CFR §60.4209(a)],
2. Operational hours of use for the engine, for purposes of maintenance checks and readiness testing shall not exceed 100 hours per year unless approved by the Administrator of the United States Environmental Protection Agency [40 CFR §60.4211(e)],
3. Operation of the engine, for purposes other than emergency use or maintenance checks and readiness testing, is prohibited [40 CFR §60.4211(e)], and
4. Operational hours of use during emergency conditions shall not be limited provided records of emergency use are retained as defined in Approval Condition 1.6 of the ORDER DE08NWP-001.

Test Method: Not applicable.
Test Frequency: Not applicable.
Required Records:

1. Manufacturer’s engine data,
2. Maintenance records, and
3. Records of cumulative operating hours for the engine (36 months maximum), recorded annually.

State-Only No.
Calculation Model Not applicable.

Periodic Monitoring: Compliance shall be demonstrated by:

1. Procuring and installing an engine compliant with emission standards of 40 CFR §60.4205(a) for the same model year and maximum engine rating [40 CFR §60.4211(b)(3) with emission standards expressed in Table 1 to NSPS IIII].

2. Operating and maintaining the stationary compression ignition internal combustion engines and control devices according to the manufacturer’s written instructions or procedures developed by the owner or operator that are approved by the engine manufacturer [40 CFR §60.4211(a)].

Test Method: Not applicable.

Test Frequency: Not applicable.

Required Records:

1. Manufacturer’s engine data will be retained through the life of the engine.

2. Maintenance records for Periodic Monitoring (2) above shall be retained for 60 months minimum.

3. Records of cumulative operating hours for the engine, recorded annually, will be retained for 36 months maximum.

4. Records of emergency use operational duration and the basis of the emergency.

State-Only Calculation Model No. Calculation Model Not applicable.
Discharge Point  241-AP, 241-SY, and 241-AY/AZ Ventilation

200E Area, Tank Farms - Ventilation

Requirement Citation (WAC or Order Citation): NOC Approval Order DE11NWP-001 (11/30/2011)

Condition Approval 11/30/2011

Condition: EMISSION LIMITS

Visible emissions will not exceed five (5)% opacity. [WAC 173-400-040(2)].

Periodic Monitoring: Compliance and monitoring shall be met by Tier 3 visible Emission Survey requirements of the Hanford AOP, Section 2. Should visible emissions be observed which are not solely attributable to water condensation, compliance shall be met by performing an opacity determination utilizing 40 CFR 60, Appendix A, Method 9, providing that such determination shall not place the visible emission observer in hazard greater than that identified for the general worker.

Test Method: 40 CFR 60, Appendix A, Method 9

Test Frequency: Not specified except when visible emissions are observed.

Required Records: Visible emission survey records in which a visible emission was observed and is not solely attributable to water condensation. 40 CFR 60, Appendix A, Method 9 results if conducted. Visible emission survey records shall be submitted to Ecology within thirty (30) days of completion of the survey with an assessment of the cause of visible emissions and a report of the maintenance conducted to maintain the subject system’s tBACT operations.

State-Only No.

Calculation Model Not applicable.
**Condition Approval 11/30/2011**

Condition: EMISSION LIMITS

VOC emissions shall not exceed 3.1 tons per year for the 241-SY system. Emissions of VOCs are based upon the operation of two tanks being mixed at the tank farm.

Periodic Monitoring: Compliance with this condition shall be demonstrated by stack gas flow and temperature measurement.

Test Method: VOC stack sampling and calculation as identified in the DE11NWP-001 Approval Condition 3.0.

Test Frequency: Annually.

Required Records:

1. Records of exhauster system stack flow rates and temperature records.
2. Records of calibration of stack flow rate and temperature measurement devices.
3. Laboratory analysis result summaries from tank headspaces or primary tank ventilation system exhaust for VOCs.

State-Only Calculation Model

No.

---

**Condition Approval 11/30/2011**

Condition: EMISSION LIMITS

VOC emissions shall not exceed 3.8 tons per year for 241-AP system. Emissions of VOCs are based upon the operation of two tanks being mixed at the tank farm.

Periodic Monitoring: Compliance with this condition shall be demonstrated by stack gas flow and temperature measurement.

Test Method: VOC stack sampling and calculation as identified in the DE11NWP-001 Approval Condition 3.0.

Test Frequency: Annually.

Required Records:

1. Records of exhauster system stack flow rates and temperature records.
2. Records of calibration of stack flow rate and temperature measurement devices.
3. Laboratory analysis result summaries from tank headspaces or primary tank ventilation system exhaust for VOCs.

State-Only Calculation Model

No.
**Condition Approval 11/30/2011**

1. **Condition:** EMISSION LIMITS
2. **VOC emissions shall not exceed 3.2 tons per year for 241-AY/AZ system.**
3. Emissions of VOCs are based upon the operation of two tanks being mixed at the tank farm.
4. **Periodic Monitoring:** Compliance with this condition shall be demonstrated by stack gas flow and temperature measurement.
5. **Test Method:** VOC stack sampling and calculation as identified in the DE11NWP-001 Approval Condition 3.0.
6. **Test Frequency:** Annually.
7. **Required Records:**
   - (1) Records of exhauster system stack flow rates and temperature records.
   - (2) Records of calibration of stack flow rate and temperature measurement devices.
   - (3) Laboratory analysis result summaries from tank headspaces or primary tank ventilation system exhaust for VOCs.
8. **State-Only** No.
9. **Calculation Model** Not applicable.
Condition Approval 11/30/2011

Condition: EMISSION LIMITS

All TAPs, as shown in Table 2 of Approval Order DE11NWP-001, shall be below their respective ASIL or approved through a Second Tier review.

Periodic Monitoring: Compliance with this condition shall be met by:

1. Development and implementation of an annual sampling and analysis plan (SAP) for each exhauster system to meet requirements of DE11NWP-001 Section 3.3. Each SAP shall address the emission of a minimum of three TAPs with the highest potential ambient concentration relative to their ASILs of WAC 173-460-150 in addition to dimethyl mercury. The TAPs addressed in the SAP shall be identified from DE11NWP-001 Table 2 and based on engineering judgment and most current tank content data. Analytical methods for the analyses shall be the EPA, Occupational Safety and Health Administration (OSHA), or National Institute for Occupational Safety and Health (NIOSH) approved, or by approved equivalent method.

2. Stack sampling for each exhauster system as described in Section 3 of the DE11NWP-001 for TAPs, and applying these concentration readings with contemporaneous stack flow rates and temperatures to determine the mass release rates of these TAPs and their respective release rate averaging times per WAC 173-460-150. Identification of any TAP not previously identified shall be submitted to Ecology within ninety (90) days of laboratory analyses which verify emissions of that TAP. Approved TAP emissions per ventilation system are detailed in DE11NWP-001Table 3 for the 241-SY ventilation system, DE11NWP-001Table 4 for the 241-AP ventilation system, and DE11NWP-001Table 5 for the 241-AY/AZ ventilation system.

3. Operating the exhauster systems in accordance with BACT and tBACT emission controls in place. These controls are operation of each primary tank ventilation exhauster system not exceeding the maximum ventilation rates shown in the DE11NWP-001 Table 1 with a moisture de-entrainer, heater, pre-filters, and a two-stage high Efficiency Particulate Air (HEPA) filtration system in service in each treatment train.

Test Method: Stack sampling and calculations identified in the DE11NWP-001 Section 3.3.

Test Frequency: Annually.

Required Records: Records shall be organized in a readily accessible manner and cover a minimum of the most recent sixty (60) month period. The records include:

1. Records of exhauster system stack flow rates and temperature records.

2. Records of calibration of stack flow rate and temperature measurement devices.

3. Emission monitoring results required in DE11NWP-001 Section 3.0
(4) Supporting data and calculations to demonstrate compliance as
detailed in DE11NWP-001 Condition 1.4.4
(5) Laboratory analysis result summaries from tank headspaces or
primary tank ventilation system exhaust for TAPs.
(6) Documentation and record-keeping of BACT and tBACT compliance
of emission controls

State-Only No.
Calculation Model Not applicable.

**Condition Approval 11/30/2011**
Condition: EMISSION LIMITS
Ammonia emissions shall not exceed 58.1 pounds per day for 241-SY
system.

Periodic Monitoring: Conduct ammonia concentration readings as described in in section 3.1.1
and 3.4 of NOC Approval Order DE11NWP-001, and applying these
concentration readings with contemporaneous stack flow rate and
temperatures to determine mass release rate of ammonia.

Test Method: Baseline assessment of ammonia stack concentrations shall be sampled a
minimum of three times within ninety (90) days of commencement of
operations. Ammonia sampling and analysis will be in accord with
approved alternative sampling procedures including the use of Draeger
tubes to measure stack gas concentration of ammonia providing such
devices are spanned to appropriately measure the stack gas ammonia
concentration. Stack flow rate and temperature will be applied with the
ammonia stack gas concentration to report ammonia emission in terms of
pounds per day.

Test Frequency: *Baseline Assessments* Baseline assessments shall be conducted within
ninety (90) days of commencement of operations. Results of baseline
emission assessments shall be submitted to Ecology within ninety (90)
days of completion of such assessment.

*Quarterly Assessment* In order to maintain reasonable assurance of
continued compliance with emission limitations from these exhauster
systems, quarterly assessment of ammonia stack emissions will be
conducted according to DE11NWP-001 Section 3.1.1. A minimum of
three samples shall be used to assess these emissions.

Required Records: Results of emission assessments, baseline and quarterly emission
monitoring results, supporting data and calculations to demonstrate
compliance with ammonia limits.

State-Only No.
Calculation Model Not applicable.
Condition Approval 11/30/2011

Condition: EMISSION LIMITS

Ammonia emissions shall not exceed 71.9 pounds per day for 241-AP system.

Periodic Monitoring: Conduct ammonia concentration readings as described in section 3.1.1 and 3.4 of NOC Approval Order DE11NWP-001, and applying these concentration readings with contemporaneous stack flow rate and temperatures to determine mass release rate of ammonia.

Test Method: Baseline assessment of ammonia stack concentrations shall be performed a minimum of three times within ninety (90) days of commencement of operations. Ammonia sampling and analysis will be in accord with approved alternative sampling procedures including the use of Draeger tubes to measure stack gas concentration of ammonia providing such devices are spanned to appropriately measure the stack gas ammonia concentration. Stack flow rate and temperature will be applied with the ammonia stack gas concentration to report ammonia emission in terms of pounds per day.

Test Frequency: Baseline Assessments Baseline assessments shall be conducted within ninety (90) days of commencement of operations. Results of baseline emission assessments shall be submitted to Ecology within ninety (90) days of completion of such assessment.

Quarterly Assessment In order to maintain reasonable assurance of continued compliance with emission limitations from these exhauster systems, quarterly assessment of ammonia stack emissions will be conducted according to DE11NWP-001 Section 3.1.1. A minimum of three samples shall be used to assess these emissions.

Required Records: Results of emission assessments, baseline and quarterly emission monitoring results, supporting data and calculations to demonstrate compliance with ammonia limits.

State-Only No.

Calculation Model Not applicable.
**Condition Approval 11/30/2011**

**Condition:** EMISSION LIMITS

Ammonia emissions shall not exceed 60.8 pounds per day for 241-AY/AZ system.

**Periodic Monitoring:** Conduct ammonia concentration readings as described in section 3.1.1 and 3.4 of NOC Approval Order DE11NWP-001, and applying these concentration readings with contemporaneous stack flow rate and temperatures to determine instantaneous mass release rate of ammonia.

**Test Method:** Baseline assessment of ammonia stack concentrations shall be performed a minimum of three times within ninety (90) days of commencement of operations. Ammonia sampling and analysis will be in accord with approved alternative sampling procedures including the use of Draeger tubes to measure stack gas concentration of ammonia providing such devices are spanned to appropriately measure the stack gas ammonia concentration. Stack flow rate and temperature will be applied with the ammonia stack gas concentration to report ammonia emission in terms of pounds per day.

**Test Frequency:**

*Baseline Assessments* Baseline assessments shall be conducted within ninety (90) days of commencement of operations. Results of baseline emission assessments shall be submitted to Ecology within ninety (90) days of completion of such assessment.

*Quarterly Assessment* In order to maintain reasonable assurance of continued compliance with emission limitations from these exhauster systems, quarterly assessment of ammonia stack emissions will be conducted according to DE11NWP-001 Section 3.1.1. A minimum of three samples shall be used to assess these emissions.

**Required Records:** Results of emission assessments, baseline and quarterly emission monitoring results, supporting data and calculations to demonstrate compliance with ammonia limits.

**State-Only No. Calculation Model** Not applicable.
Condition Approval 11/30/2011

Condition: OPERATIONAL LIMITS

Normal Double-Shell Tank (DST) primary tank ventilation system flow rates during Normal Operations (e.g. storage, retrieval, and sampling) are shown in the Table below. The maximum flow rates for the DST ventilation systems shall not exceed ventilation rates for Maximum Operations (Table below).

2. Carbon monoxide (CO) emission limit of 610 g/kW-hr

Compliance Requirement: Compliance will be determined by operating and maintaining the engine in accordance with the manufacturer’s recommendations or instructions.

Required Records:
1. Manufacturer’s maintenance or operation manual
2. Documentation of maintenance performed

State-Only: No

Calculation Model: Not applicable.

---

⁴ The planned replacement engine will be subject to the applicable requirements of 40 CFR 60 Subpart JJJJ upon installation, which is expected to occur before the end of CY2013. An AOP Notification of Change Not Requiring Revision with appropriate engine compliance information for the replacement Rattle Snake Barricade engine was submitted to Ecology on July 16, 2013.

This revision is planned to be issued after the end of the CY2013. As a result, the regulatory requirements for this discharge point are based on 40 CFR 60 Subpart JJJJ for the new engine and not based on the current engine which is regulated on 40 CFR 63 Subpart ZZZZ.
Discharge Point: 222-SE (Table 1.5 Engine)

Requirement Citation: NESHAP Subpart ZZZZ

Condition:

1. Operate and Maintain the engine in accordance with Manufacturer’s recommendations or instructions; or develop a written maintenance plan in a manner consistent with good air pollution control practice for minimizing emissions.

2. Change oil and filter every 500 hours of operation or annually, whichever comes first

3. Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first

4. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary

Compliance Requirement:

1. Compliance will be determined by operating and maintaining the engine in accordance with the manufacturer’s recommendations or instructions; or a written maintenance plan in a manner consistent with good air pollution control practice for minimizing emissions.

2. Compliance will be demonstrated by installation and operation of non-resettable hour meter

Required Records:

1. Manufacturer’s maintenance or operation manual

2. Hour meter readings

3. Documentation of maintenance performed

State-Only: No

Calculation Model: Not applicable.
Discharge Point: 242-A (Table 1.5 Engine)

242-A Evaporator

Requirement Citation: NESHAP Subpart ZZZZ

Condition:
(1) Operate and Maintain the engine in accordance with Manufacturer’s recommendations or instructions; or develop a written maintenance plan in a manner consistent with good air pollution control practice for minimizing emissions.
(2) Change oil and filter every 500 hours of operation or annually, whichever comes first
(3) Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first
(4) Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary

Compliance Requirement: (1) Compliance will be determined by operating and maintaining the engine in accordance with the manufacturer’s recommendations or instructions; or a written maintenance plan in a manner consistent with good air pollution control practice for minimizing emissions.
(2) Compliance will be demonstrated by installation and operation of non-resettable hour meter

Required Records:
(1) Manufacturer’s maintenance or operation manual
(2) Hour meter readings
(3) Documentation of maintenance performed

State-Only: No

Calculation Model: Not applicable.
Discharge Point: 234-5Z (Table 1.5 engine)

Requirement Citation: NESHAP Subpart ZZZZ

Condition:
1. Operate and Maintain the engine in accordance with Manufacturer’s recommendations or instructions
2. Change oil and filter every 500 hours of operation or annually, whichever comes first
3. Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first
4. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary

Compliance Requirement: (1) Compliance will be determined by operating and maintaining the engine in accordance with the manufacturer’s recommendations or instructions.

(2) Compliance will be demonstrated by installation and operation of non-resettable hour meter

Required Records:
1. Manufacturer’s maintenance or operation manual
2. Hour meter readings
3. Documentation of maintenance performed

State-Only: No

Calculation Model: Not applicable.
1 **Discharge Point:** 400 Area (Table 1.5 Engine)

2 400 Area

3 Requirement Citation: NESHAP Subpart ZZZZ

4 Condition: (1) Operate and Maintain the engine in accordance with Manufacturer’s recommendations or instructions

5 (2) Change oil and filter every 500 hours of operation or annually, whichever comes first

6 (3) Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first

7 (4) Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary

8 Compliance Requirement: (1) Compliance will be determined by operating and maintaining the engine in accordance with the manufacturer’s recommendations or instructions.

9 (2) Compliance will be demonstrated by installation and operation of non-resettable hour meter

10 Required Records: (1) Manufacturer’s maintenance or operation manual

11 (2) Hour meter readings

12 (3) Documentation of maintenance performed

13 State-Only: No

14 Calculation Model: Not applicable.
Discharge Point: 600 Area Fire Station (Building 609A) (Table 1.5 Engine)

600 Area Fire Station (Building 609A)

Requirement Citation: NESHAP Subpart ZZZZ

Condition:
1. Operate and Maintain the engine in accordance with Manufacturer’s recommendations or instructions.
2. Change oil and filter every 500 hours of operation or annually, whichever comes first.
3. Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first.
4. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary.

Compliance Requirement: (1) Compliance will be determined by operating and maintaining the engine in accordance with the manufacturer’s recommendations or instructions.
(2) Compliance will be demonstrated by installation and operation of non-resettable hour meter.

Required Records:
1. Manufacturer’s maintenance or operation manual
2. Hour meter readings
3. Documentation of maintenance performed

State-Only: No
Calculation Model: Not applicable.
Discharge Point: 2721E (Table 1.5 Engine)

1. Requirement Citation: NESHAP Subpart ZZZZ

Condition:
1. Operate and Maintain the engine in accordance with Manufacturer’s recommendations or instructions
2. Change oil and filter every 500 hours of operation or annually, whichever comes first
3. Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first
4. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary

Compliance Requirement:
1. Compliance will be determined by operating and maintaining the engine in accordance with the manufacturer’s recommendations or instructions.
2. Compliance will be demonstrated by installation and operation of non-resettable hour meter

Required Records:
1. Manufacturer’s maintenance or operation manual
2. Hour meter readings
3. Documentation of maintenance performed

State-Only: No

Calculation Model: Not applicable.
Discharge Point: Yakima Barricade (Table 1.5 Engine)

Yakima Barricade

Requirement Citation: NESHAP Subpart ZZZZ

Condition:
(1) Operate and maintain the engine in accordance with Manufacturer’s recommendations or instructions
(2) Change oil and filter every 500 hours of operation or annually, whichever comes first
(3) Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first
(4) Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary

Compliance Requirement: (1) Compliance will be determined by operating and maintaining the engine in accordance with the manufacturer’s recommendations or instructions.
(2) Compliance will be demonstrated by installation and operation of non-resettable hour meter

Required Records:
(1) Manufacturer’s maintenance or operation manual
(2) Hour meter readings
(3) Documentation of maintenance performed

State-Only: No

Calculation Model: Not applicable.
1 Discharge Point: 282-B (Table 1.5 Engine)

2 282-B

3 Requirement Citation: NESHAP Subpart ZZZZ

4 Condition: (1) Operate and Maintain the engine in accordance with Manufacturer’s recommendations or instructions

5 (2) Change oil and filter every 500 hours of operation or annually, whichever comes first

6 (3) Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first

7 (4) Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary

8 Compliance Requirement: (1) Compliance will be determined by operating and maintaining the engine in accordance with the manufacturer’s recommendations or instructions.

9 (2) Compliance will be demonstrated by installation and operation of non-resettable hour meter

10 Required Records: (1) Manufacturer’s maintenance or operation manual

11 (2) Hour meter readings

12 (3) Documentation of maintenance performed

Discharge Point: TEDF Pump Station 2 (225E) (Table 1.5 Engine)

Requirement Citation: NESHAP Subpart ZZZZ

Condition:
1. Operate and Maintain the engine in accordance with Manufacturer’s recommendations or instructions
2. Change oil and filter every 500 hours of operation or annually, whichever comes first
3. Inspect spark plugs every 1,000 hours of operation or annually, whichever comes first.
4. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary

Compliance Requirement:
1. Compliance will be determined by operating and maintaining the engine in accordance with the manufacturer’s recommendations or instructions.
2. Compliance will be demonstrated by installation and operation of non-resettable hour meter

Required Records:
1. Manufacturer’s maintenance or operation manual
2. Hour meter readings
3. Documentation of maintenance performed

State-Only: No

Calculation Model: Not applicable.
Discharge Point: WTP MHF South-40 Laydown Entry Gate (Light Tower)

(Table 1.5 Engine)

Requirement Citation: NESHAP Subpart ZZZZ

Condition:

1. Operate and Maintain the engine in accordance with Manufacturer’s recommendations or instructions.
2. Change oil and filter every 1,000 hours of operation or annually, whichever comes first.
3. Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first.
4. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary.

Compliance Requirement:

1. Compliance will be determined by operating and maintaining the engine in accordance with the manufacturer’s recommendations or instructions.
2. Compliance will be demonstrated by installation and operation of non-resettable hour meter.

Required Records:

1. Manufacturer’s maintenance or operation manual
2. Hour meter readings
3. Documentation of maintenance performed

State-Only: No

Calculation Model: Not applicable.
Discharge Point: WTP MHF North-10 Laydown Area (Light Tower) 1 of 2

(Table 1.5 Engine)

WTP MHF North-10 Laydown Area (light tower) 1 of 2

Requirement Citation: NESHAP Subpart ZZZZ

Condition:

1. Operate and Maintain the engine in accordance with Manufacturer’s recommendations or instructions
2. Change oil and filter every 1,000 hours of operation or annually, whichever comes first
3. Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first
4. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary

Compliance Requirement:

1. Compliance will be determined by operating and maintaining the engine in accordance with the manufacturer’s recommendations or instructions.
2. Compliance will be demonstrated by installation and operation of non-resettable hour meter

Required Records:

1. Manufacturer’s maintenance or operation manual
2. Hour meter readings
3. Documentation of maintenance performed

State-Only: No

Calculation Model: Not applicable.
Discharge Point: WTP MHF North-10 Laydown Area (Light Tower) 2 of 2
(Table 1.5 Engine)

WTP MHF North-10 Laydown Area (light tower) 2 of 2

Requirement Citation: NESHAP Subpart ZZZZ

Condition:
1. Operate and Maintain the engine in accordance with Manufacturer’s recommendations or instructions
2. Change oil and filter every 1,000 hours of operation or annually, whichever comes first
3. Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first
4. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary

Compliance Requirement:
1. Compliance will be determined by operating and maintaining the engine in accordance with the manufacturer’s recommendations or instructions.
2. Compliance will be demonstrated by installation and operation of non-resettable hour meter

Required Records:
1. Manufacturer’s maintenance or operation manual
2. Hour meter readings
3. Documentation of maintenance performed

Discharge Point:  WTP MHF South-40 Laydown Yard East X-Ray Tent
(Table 1.5 Engine)

WTP MHF South-40 Laydown Yard East X-Ray Tent

Requirement Citation:  NESHAP Subpart ZZZZ

Condition:  
(1) Operate and Maintain the engine in accordance with Manufacturer’s recommendations or instructions
(2) Change oil and filter every 1,000 hours of operation or annually, whichever comes first
(3) Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first
(4) Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary

Compliance Requirement:  
(1) Compliance will be determined by operating and maintaining the engine in accordance with the manufacturer’s recommendations or instructions.
(2) Compliance will be demonstrated by installation and operation of non-resettable hour meter

Required Records:  
(1) Manufacturer’s maintenance or operation manual
(2) Hour meter readings
(3) Documentation of maintenance performed

State-Only:  No

Calculation Model:  Not applicable.
### Discharge Point: WTP Construction Site Pretreatment Tower Crane

**Condition:**

1. Operate and Maintain the engine in accordance with Manufacturer’s recommendations or instructions.
2. Change oil and filter every 500 hours of operation or annually, whichever comes first.
3. Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first.
4. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary.

**Compliance Requirement:**

1. Compliance will be determined by operating and maintaining the engine in accordance with the manufacturer’s recommendations or instructions.
2. Compliance will be demonstrated by installation and operation of non-resettable hour meter.

**Required Records:**

1. Manufacturer’s maintenance or operation manual
2. Hour meter readings
3. Documentation of maintenance performed

**State-Only:** No

**Calculation Model:** Not applicable.
Discharge Point:  WTP Construction Site High-Level Waste Tower Crane  
(Table 1.5 Engine)

WTP Construction Site High-Level Waste Tower Crane

Requirement Citation:  NESHAP Subpart ZZZZ

Condition:  
(1) Operate and Maintain the engine in accordance with Manufacturer’s recommendations or instructions
(2) Change oil and filter every 500 hours of operation or annually, whichever comes first
(3) Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first
(4) Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary

Compliance Requirement:  
(1) Compliance will be determined by operating and maintaining the engine in accordance with the manufacturer’s recommendations or instructions.
(2) Compliance will be demonstrated by installation and operation of non-resettable hour meter

Required Records:  
(1) Manufacturer’s maintenance or operation manual
(2) Hour meter readings
(3) Documentation of maintenance performed

State-Only:  No

Calculation Model:  Not applicable.
Discharge Point:  WTP Construction Site Building T-14 (Table 1.5 Engine)

WTP Construction Site Building T-14

Requirement Citation:  NESHAP Subpart ZZZZ

Condition:

1. Operate and Maintain the engine in accordance with Manufacturer’s recommendations or instructions
2. Change oil and filter every 1,000 hours of operation or annually, whichever comes first
3. Inspect air cleaner every 1,000 hours of operation or annually, whichever comes first
4. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary

Compliance Requirement:

1. Compliance will be determined by operating and maintaining the engine in accordance with the manufacturer’s recommendations or instructions.
2. Compliance will be demonstrated by installation and operation of non-resettable hour meter

Required Records:

1. Manufacturer’s maintenance or operation manual
2. Hour meter readings
3. Documentation of maintenance performed

2.0 COMPLIANCE AND PERIODIC MONITORING PROVISIONS

Compliance and periodic monitoring provisions are provided in the following sections.

2.1 Visible Emission Surveys

Visible emission surveys must be conducted during daylight hours and during periods when the emission unit is operating.

Tier 1

This method applies primarily to fossil-fuel combustion units and other emission units that might be a source of visible emissions. It is broken into two parts, Part A and Part B, which are described below. Visible emission surveys are to be conducted during daylight hours, after the unit has reached normal operating temperature and revolutions per minute, or 15 minutes after startup.

Part A – If the combustion unit is certified to meet EPA emission standards contained in 40 CFR Part 89.112, Table 1, then limited visible emission surveys may be performed if operation and maintenance in accordance with manufacturer directions are followed. It is important to note that the Tier reference in 40 CFR Part 89.112, Table 1 is not the Tier reference used in this section. A visible emission survey will be performed upon initial installation as described in Part B to document no visible emissions are observed during normal operations. If visible emissions are observed during normal operations, then a visible emission survey will be performed as described in Part B.

Part B – This method consists of operating personnel observing visible emissions from the emission unit according to the frequency identified in Table 1.6 of Attachment 1. If the operator observes visible emissions for more than 10 consecutive minutes during the observation period, the cause(s) of the visible emissions will be determined and corrective actions taken as necessary, or a visible determination of opacity will be performed using EPA Method 9 of 40 CFR 60, Appendix A. Records of corrective actions taken to reduce opacity shall be maintained and available for Ecology inspection. Where no frequency is specified, visible emission surveys will be performed a minimum of once per quarter.

Provided the emissions observed during the EPA Method 9 of 40 CFR 60 tests are representative of normal operations and the Method 9 test shows the emission unit is compliant, no further observations are required until the next required periodic monitoring. Records of corrective actions taken to reduce opacity shall be maintained and available for Ecology inspection.

If after corrective actions have been taken and results from the EPA Method 9 of 40 CFR 60 tests indicate visible emissions in excess of the limit, a deviation report will be filed with Ecology as required by Section 5.16.

Tier 2

Some emission units are unlikely sources of visible emissions and are not expected to exceed applicable opacity limit based on past operating experience and/or expected process behavior. These can include research and development laboratories, analytical laboratories, gas-fired boilers and engines, and some fossil-fueled combustion units. For these emission units, a visible emission survey will be conducted and the results recorded. If visible emissions from one of these emission units are observed for more than 10 consecutive minutes, an attempt to identify
the cause(s) of the visible emissions will be made and those results recorded. The recorded entry also will identify any corrective actions taken and the likely frequency of a future recurrence. If the event is likely to recur, and cannot be demonstrated to consist of water vapor, a determination of opacity will be made using EPA Method 9. The frequency of the visible emission surveys shall be as required in Table 1.6 of Attachment 1 unless the following procedure has been completed satisfactorily. Where no frequency is specified, visible emission surveys will be performed a minimum of once per year.

The procedure for reducing visible emission survey frequencies is as follows:

If ten consecutive cold starts are negative, visible emission surveys will be performed only when visible emissions are observed, but must be conducted at least once per year. Visible emission surveys during these periods will be conducted for non-radionuclides-emitting stacks according to the process described in Tier 2.

If visible emissions from one of these emission units are observed for more than 10 consecutive minutes, the event is likely to recur, and cannot be demonstrated to consist of water vapor, the required frequency for visible emission surveys will revert back to original requirements.

2.2 General Standards Complaint Investigations

Complaints forwarded by Ecology shall be addressed promptly and assessed for corrective action. An initial informal response shall be made to Ecology within 30 working days of the Permittee receiving the complaint. This initial response shall document preliminary investigation results and any planned or completed corrective actions. Follow-up report(s) shall be provided as directed by Ecology. The Permittee shall maintain records of complaints forwarded by Ecology.

2.3 Measures to Control Fugitive Emissions and Fugitive Dust

Construction projects with a potential to generate particulates will address fugitive emissions and fugitive dust control during pre-job planning and job safety analysis. Measures to control fugitive emissions and fugitive dust may include but are not limited to:

1. Watering
2. Use of chemical stabilizers
3. Use of physical barriers and/or physical stabilization
4. Use of vegetative stabilization
5. Clearing only limited areas to reduce dust generation
6. Covering haul vehicles
7. Minimizing track-out
8. Controlling site traffic to decrease disturbance of soil and vegetation to decrease dust generated from unnecessary vehicular travel.
2.4 Reserved

2.5 Recordkeeping for Boilers

DOE and the contractor shall maintain appropriate monthly records of the fuel use on each individual boiler. These data, along with the emission factors presented in Ecology Regulatory Order 97NM-138, will be used to determine monthly emission levels for individual boilers, and collectively for the 200 East, 200 West, and 300 Area. If Ecology or the Permittee determines that emission factors different than the factors specified in Regulatory Order 97NM-138 are appropriate, the public will be provided with an opportunity for review. WAC 173-400-115 compliance with the standard may be determined based on a certification from the fuel supplier containing the name of the oil supplier and a statement from the oil supplier that the oil complies with the specifications under the definition of distillate oil in 40 CFR 60.41b. An annual report including records of fuel supplier certifications and a certification by the owner or operator that the records of fuel supplier certifications submitted represent all of the fuel combusted during the year. Logs of boiler tune-ups and significant boiler maintenance activities will be kept.

2.6 Steam Generating Units Source Tests

All source tests for the boilers regulated by Notice of Construction 97NM-138 have been conducted using EPA and Ecology approved procedures with the test boilers operating at full capacity. Tests were conducted on a maximum of five boilers selected on the basis of boiler capacity and fuel type. The procedure for selecting the test boilers were agreed to by Ecology and DOE before conducting the tests. A procedure for selecting a representative subset of boilers for testing once every 5 years was developed before the initial 5 year follow-up test. The public was provided an opportunity for review of the procedure as part of an AOP modification.

The following list is an inventory of the larger boilers that were subject to testing (maximum of 5 boilers):

<table>
<thead>
<tr>
<th>Distillate Oil-Fired Boilers</th>
<th>Number of Units</th>

<tr>
<td>300 BHP</td>
<td>4</td>
</tr>
</tbody>
</table>

In 2005 the U.S. Department of Energy Richland Office (DOE-RL) requested the removal of Air Operating Permit compliance testing for the energy-saving fossil fuel fired boilers operated by Johnson Controls, Inc (JCI) since 1998 at the Hanford Site. JCI conducted the initial air compliance test in 1998, and the first 5-year follow-up test in 2003. Both tests demonstrated that the emissions were within the limits stated in the Notice of Construction (NOC) and Air Operating Permit (AOP). It is obvious that the same compliance can be maintained by continuously using low sulfur fuel and implementing good combustion practices. Ecology approved the request of eliminating future 5-year compliance tests on June 15, 2005. The
emissions will be within the NOC and AOP limits as long as JCI continues to use low sulfur fuel and maintain good combustion practice and maximum achievable control technology (MACT) standards.

2.7 SO₂ Emissions Compliance

Tier 1: Fuel-Oil Fired Combustion Units:

<table>
<thead>
<tr>
<th>Required records</th>
<th>Calculation Model</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Amount and type of fuel burned</td>
<td>Model 1</td>
</tr>
<tr>
<td>2. Vendor documentation or fuel analysis once per year.</td>
<td></td>
</tr>
</tbody>
</table>

Tier 2: Other Significant Emission Units:

Ecology has determined, based on process knowledge, that these emission units do not emit significant levels of SO₂. The Permittee annually shall certify that the processes have not been modified to increase SO₂ emissions and no SO₂ monitoring is required.

2.8 Visible Emissions Enforceability

WAC 173-400-040(2)(a) and (2)(b) are federally enforceable sections. Soot blowing and grate cleaning are allowed if the operator can demonstrate that the emissions will not exceed 20% opacity for more than 15 minutes in any 8 consecutive hours.

2.9 SO₂ Enforceability

WAC 173-400-040(7) is federally enforceable.
3.0 RECORDKEEPING

The Permittee shall maintain records of all required monitoring data and support information. These records shall be maintained for 5 years from the date of the monitoring sample, measurement, report, or application. Support information includes all calibration and maintenance records, all original continuous monitoring records (such as strip charts or equivalent), and required reports. Most of these records are retained on-site in electronic format. Regulatory agencies accept electronic records as supporting information.

[WAC 173-401-615(2)(a), WAC 173-401-615(2)(c)]

3.1 Emission Calculations

Emission calculations for SO₂, nitrogen oxides, volatile organic compounds, ammonia, gas cylinders, chemical inventory, air concentrations, and TAPs can be found in Section 3.1 of the Statement of Basis for Attachment 1.
