RE: Water Quality Certification Order #4208 and Coastal Zone Management Consistency Determination for U.S. Army Corps of Engineers (Corps) Reference #200600052 to Fill or Adversely Modify a Maximum of 6.0 Acres of Wetlands at Warren G. Magnuson Park, City of Seattle, King County, Washington

Dear Mr. Jainga:

On February 03, 2006 the Washington State Department of Ecology (Ecology) received a Joint Aquatic Resources Permit Application (JARPA) from the City of Seattle Department of Parks and Recreation (Parks) requesting a Section 401 Water Quality Certification (Certification). On January 19, 2007, a request to withdraw and re-apply for a Certification was submitted with no additional changes to the original proposed project. Pursuant to Chapter 173-225 WAC public notices regarding the request for Certification were issued on October 20, 2006 and then again on January 25, 2007.

On behalf of the State of Washington, through the enclosed Order, Ecology certifies that the work described in the original JARPA submitted on February 3, 2006 and in the JARPA withdrawal and re-application form submitted on January 19, 2007, and in both public notices (October 20, 2006 and January 25, 2007) complies with applicable provisions of Sections 301, 302, 303, 306 and 307 of the Clean Water Act, as amended, and applicable state laws. This certification is subject to the conditions contained in the enclosed Order.

On October 26, 2006, the City of Seattle Department of Parks and Recreation, submitted a Certification of Consistency with the Washington State Coastal Zone Management Program (CZMP). Pursuant to Section 307(c)(3) of the Coastal Zone Management Act of 1972 as amended, Ecology concurs with City of Seattle Department of Parks and Recreation's determination that the proposed work is consistent with Washington's CZMP. This concurrence is based upon the City of Seattle Department of Parks and Recreation's compliance with all applicable enforceable policies of the CZMP, including Section 401 of the CWA.

Mr. Jon Jainga  
April 6, 2007  
Page 2 of 2

If you have any questions, please contact Cynthia Walcker, Federal Project Coordinator at (425) 649-4318, [cynt461@ecy.wa.gov](mailto:cynt461@ecy.wa.gov). The enclosed Order may be appealed by following the procedures described in the Order.

Sincerely,

Geoff Tallent  
Northwest Regional Office  
Shorelands and Environmental Assistance Program

TO: City of Seattle Department of Parks and Recreation  
Attn: Mr. Jon Jainga, Park Planning and Development Project Manager  
800 Maynard Avenue South, 3<sup>rd</sup> Floor  
Seattle, Washington 98134-1336

On February 3, 2006 the Washington State Department of Ecology (Ecology) received a Joint Aquatic Resources Permit Application (JARPA) from the City of Seattle Department of Parks and Recreation (Parks) requesting a Section 401 Water Quality Certification (Certification). On January 19, 2007, a request to withdraw and re-apply for a Certification was submitted with no additional changes to the original proposed project. Pursuant to Chapter 173-225 WAC public notices regarding the request for Certification were issued on October 20, 2006 and then again on January 25, 2007.

The proposed Magnuson Park Phase 2 Development will occur on approximately 95 of the Parks 350 acres. The project proposes to fill or adversely modify a maximum of 6.0 acres of primarily palustrine emergent wetlands to construct four regulation athletic fields and the sub-grade for one future field on the western portion of project area. Construction of the fields will involve the placement of fill to raise the level of the fields above existing grades in order to provide positive drainage and to provide water to the down gradient wetlands. Fields will be surfaced with grass or artificial turf. Additionally, a north to south paved perimeter trail is proposed to provide access across the interior portion of the site in addition to other new walking trails. Wetlands located within the project area are Category III wetlands except for one which is rated as a Category IV. Impacts to wetlands will be compensated for on-site by creating approximately 10 acres of new emergent wetlands and enhancing approximately 4 acres of existing emergent wetlands.

Magnuson Park is located in the City of Seattle, King County, Washington. The Park lies in Section 2, Range 4 East, and Township 25 North. Magnuson Park is bordered on the west by Sandpoint Way NE, along the south by NE 65<sup>th</sup> Street, on the east side by Lake Washington, and to the north by the National Oceanic and Atmospheric Administration (NOAA facilities). The Park is located within the Lake Washington/Cedar/Sammamish Watershed (WRIA 8).

Additionally, the proposal includes removal of over 12 acres of existing pavement and impervious surfaces within the project area. The project would daylight an existing storm drain system that crosses the site; and after pre-treating the stormwater via mechanical filters (to be placed west of the project area), the water would flow through nearly 1,000 linear feet of the

created and enhanced wetlands prior to discharging through an existing outfall into Lake Washington. Additionally, sheet flow from 65<sup>th</sup> Street which currently flows untreated through a storm drain system and into Lake Washington would be collected, pre-treated, and then directed through hundreds of feet of created and enhanced wetlands prior to discharging through the existing outfall into Lake Washington.

**AUTHORITIES:**

In exercising authority under 33 U.S.C. § 1341, 16 U.S.C. § 1456, RCW 90.48.120, and RCW 90.48.260, Ecology has examined this application pursuant to the following:

1. Conformance with applicable water quality-based, technology-based, and toxic or pretreatment effluent limitations as provided under 33 U.S.C. §§ 1311, 1312, 1313, 1316, and 1317 (FWPCA §§ 301, 303, 306 and 307);
2. Conformance with the state water quality standards contained in Chapter 173-201A WAC and authorized by 33 U.S.C. § 1313 and by Chapter 90.48 RCW, and with other applicable state laws; and
3. Conformance with the provision of using all known, available and reasonable methods to prevent and control pollution of state waters as required by RCW 90.48.010.

**WATER QUALITY CERTIFICATION CONDITIONS:**

Through issuance of this Order, Ecology certifies that it has reasonable assurance that the activity as proposed and conditioned will be conducted in a manner that will not violate applicable water quality standards and other appropriate requirements of state law. In view of the foregoing and in accordance with 33 U.S.C. § 1341, RCW 90.48.120, RCW 90.48.260 Chapter 173-200 WAC and Chapter 173-201A WAC, water quality certification is granted to the Applicant subject to the conditions within this Order.

Certification of this proposal does not authorize the Applicant to exceed applicable state water quality standards (Chapter 173-201A WAC), ground water standards (Chapter 173-200 WAC) or sediment quality standards (Chapter 173-204 WAC). Furthermore, nothing in this certification shall absolve the Applicant from liability for contamination and any subsequent cleanup of surface waters, ground waters or sediments occurring as a result of project construction or operations.

**A. General Conditions**

- A1. For purposes of this Order, the term "Applicant" shall mean the City of Seattle Department of Parks and Recreation, and its agents, assignees and contractors.
- A2. For purposes of this Order, all submittals required by its conditions shall be sent to Ecology's Northwest Regional Office, Attn: 401/CZM Federal Project Coordinator, 3190 160<sup>th</sup> Avenue SE, Bellevue, WA 98008-5452. Any submittals shall reference Order #4208 and Corps Reference #200600052.
- A3. Work authorized by this Order is limited to the work described in the JARPA received by Ecology on February 3, 2006. The Applicant will be out of compliance with this Order and must reapply with an updated application if the information contained in the JARPA is voided by subsequent changes to the project not authorized by this Order.
- A4. Within 30 days of receipt of an updated JARPA, Ecology will determine if the revised project requires a new water quality certification and public notice or if a modification to this Order is required.
- A5. This Order shall be rescinded if the Corps of Engineers does not issue a Section 404 permit.
- A6. This Order does not exempt, and is provisional upon, compliance with other statutes and codes administered by federal, state, and local agencies.
- A7. Copies of this Order shall be kept on the job site and readily available for reference by Ecology personnel, the construction superintendent, construction managers and lead workers, and state and local government inspectors.
- A8. The Applicant shall provide access to the project site and all mitigation sites upon request by Ecology personnel for site inspections, monitoring, necessary data collection, and/or to ensure that conditions of this Order are being met.
- A9. Nothing in this Order waives Ecology's authority to issue additional orders if Ecology determines that further actions are necessary to implement the water quality laws of the state. Further, Ecology retains continuing jurisdiction to make modifications hereto through supplemental order, if additional impacts due to project construction or operation are identified (*e.g.*, violations of water quality standards, downstream erosion, etc.), or if additional conditions are necessary to further protect water quality.
- A10. The Applicant shall ensure that all appropriate project engineers and contractors at the project site have read and understand relevant conditions of this Order and all permits, approvals, and documents referenced in this Order. The Applicant shall provide Ecology a signed statement (see Attachment A for an example) from each project engineer and contractor that they have read and understand the conditions of this Order and the above-

referenced permits, plans, documents and approvals. These statements shall be provided to Ecology before construction begins at the project or mitigation sites.

- A11. This Order does not authorize direct, indirect, permanent, or temporary impacts to waters of the state or related aquatic resources, except as specifically provided for in conditions of this Order.
- A12. Any person who fails to comply with any provision of this Order shall be liable for a penalty of up to ten thousand dollars (\$10,000) per violation for each day of continuing noncompliance.

#### **B. Conditions for Construction Activities**

- B1. The Applicant shall comply with all stormwater requirements within the National Pollutant Discharge Elimination System (NPDES) Stormwater General Permit for Construction Activity Permit No. WAR-009132 dated January 19, 2007 for this project.
- B2. The Applicant shall prepare and implement a Stormwater Pollution Prevention Plan (SWPPP) prior to the start of construction.
- B3. The project shall be clearly marked/staked prior to commencing any construction activities. Clearing limits, travel corridors and stockpile sites shall be clearly marked. Sensitive areas to be protected from disturbance shall be delineated and marked with brightly colored construction fence, so as to be clearly visible to equipment operators. All project staff shall be trained to recognize construction fencing that identifies sensitive areas boundaries (wetlands, streams, riparian corridors, etc.). Equipment shall enter and operate only within the delineated clearing limits, corridors and stockpile areas.
- B4. Work in or near waters of the state shall be done so as to minimize turbidity, erosion, and other water quality impacts. Construction stormwater, sediment and erosion control Best Management Practices suitable to prevent exceedances of state water quality standards (e.g., a perimeter erosion control silt fence, etc.), shall be in place before starting clearing, filling, and grading work at the site. Additionally, erosion control devices shall be maintained, so as to be effective throughout construction.
- B5. All construction debris shall be properly disposed of on land so that it cannot enter a waterway or cause water quality degradation to state waters.
- B6. Machinery and equipment used during construction shall be serviced, fueled, and maintained on uplands in order to prevent contamination to surface waters.
- B7. The Applicant shall dispose of materials removed from the site at an established disposal site.

### **C. Clean Fill Construction Conditions**

- C1. The use of imported fill may result in impacts to wetlands or other waters of the state. To minimize potential impacts, the Applicant shall use clean fill that does not contain toxic materials in toxic amounts.
- C2. The Applicant shall require that all fill be tested for toxics prior to contractor acceptance. Fill will be appropriate dirt, sand, etc. as necessary for field base material.

### **D. Operational Stormwater Requirements**

- D1. The Applicant shall design, construct, operate, and maintain stormwater treatment facilities to ensure that discharges will not result in exceedances of state water quality criteria in receiving waters. All runoff from impervious surfaces shall be treated using all known available and reasonable treatment (AKART), at the time of final design.
  - i. The Applicant shall design the stormwater treatment facilities in accordance with *2005 King County Surface Water Design Manual*
- D2. The Applicant shall provide water quality treatment for 2.9 acres of existing Pollution Generating Impervious Surface (PGIS) by installing seven water quality treatment BMPs including filter strips, spill control/oil prevention tees, vegetated swales, and Stormfilters (filled with zeolite-perlite-granular activated carbon (ZPG) media) to replace existing catchbasins.
- D3. The Applicant shall extend the maintenance interval for subbasin WQ6 Stormfilter by providing an upstream storm drain catchbasin with a large sump and a spill-prevention tee. Maintenance of the upstream catchbasin shall be part of regular park maintenance activities.
- D4. The Applicant shall install fencing around athletic fields to reduce pet waste impacts to water quality.
- D5. The Applicant shall install fencing and vegetative buffers around wetlands to reduce human and pet water quality impacts.
- D6. The Applicant shall not use pesticides on the naturally occurring athletic fields.
- D7. The Applicant shall submit the final stormwater treatment system design to Ecology for review and comment 30 days prior to the start of construction of the treatment system.

- D8. Sixty (60) days prior to the completion of the stormwater treatment system the Applicant shall submit to Ecology for review and comment a Stormwater Facilities Operation and Maintenance Plan which addresses maintenance, operation and monitoring of all stormwater facilities approved by this Order. This Plan shall address management of accumulated sediments in the infiltration ponds. For the purpose of meeting this condition the Applicant may submit other existing documents or updates of other existing documents that meet this requirement.
- D9. Prior to the operation of the Magnuson Park Phase 2 Development athletic fields the Applicant shall submit to Ecology a final Landscape Management Plan as outlined in Reference 4-C of the *2005 King County Surface Water Design Manual*. For the purpose of meeting this condition the Applicant may submit other existing documents that meet this requirement. If the Applicant uses existing documents, the Applicant shall prepare a matrix to be used to walk through the materials to show where and how the provisions of the Landscape Management plan have been met. The plan and/or matrix shall be stamped, signed and dated by a civil engineer.
- D10. The Applicant shall conduct annual monitoring associated with the Landscape Management Plan and provide annual notification to Ecology prior to December 1<sup>st</sup> of each year that the Landscape Management Plan has been carried out, and that needed amendments or updates to the Landscape Management Plan have been made.

#### **E. Operational Stormwater Monitoring and Reporting Requirements**

- E1. Following construction, the Applicant shall monitor stormwater runoff to determine the success of the stormwater treatment systems. Water quality monitoring and visual observations shall be conducted for the first two years of operation, and shall be conducted at least monthly during storm events or during active runoff into the stormwater treatment system(s). If during or after the initial monitoring effort, results of monitoring show a pattern of exceedances of state water quality standards or discharges to the emergency overflow, additional monitoring may be required.
- E2. Results from the stormwater sampling and analysis shall be sent to Ecology's Federal Permit Coordinator within 30 days of each sampling event.

If the monitoring results show that the water quality standards and the designed treatment systems performance standards are not being met, Ecology may determine the project to be in violation of this Order, and additional treatment conditions and/or mitigation may be required.

## F. Wetland Conditions

- F1. The project involves filling approximately 5.66 acres of Category III palustrine emergent (PEM) wetlands and a 0.34 acre Category IV PEM wetland in order to construct 4 athletic fields and the sub-grade for 1 future field. Wetland impacts shall be mitigated on-site through creation of approximately 10 acres of wetlands and enhancement of approximately 4 acres of wetlands. These measures are described in the following documents, except as modified by this Order, and including any approved revisions:
- a. *Conceptual Wetland Compensation Plan for Magnuson Park Phase 2 Development, Seattle, Washington, COE #200600052, January 27, 2006, prepared by Sheldon & Associates, Inc. (The “mitigation plan”).*
  - b. *Monitoring Plan for Wetland Compensatory Mitigation for Magnuson Park Phase 2 Development, Seattle, Washington, COE #200600052, February 9, 2006, prepared by Sheldon & Associates, Inc. (The “monitoring plan”).*
- F2. In addition to mitigation measures described in the above-referenced document, the following requirements shall be conditions for all mitigation sites:
- a. Timing: The wetland mitigation plan shall be implemented either before or concurrently with construction of the athletic fields that impact wetlands, and planted during the first appropriate planting season following site construction. In no case should planting be delayed more than nine (9) months after authorized wetland impacts occur.
  - b. Record Report and Drawings: A report documenting the final design of the mitigation project areas shall be prepared when site construction and planting is completed and no later than December 1<sup>st</sup> of the year construction is completed. The report shall include the following:
    - Indicate type of report (as-built or monitoring);
    - Name of project;
    - Federal reference number;
    - Date of the report;
    - Vicinity map showing site access;
    - Drawings that clearly identify the boundaries of the mitigation areas;
    - The installed planting scheme showing densities, sizes, and locations of plants, as well as plant sources and the time of planting;
    - Photographs of the area taken from permanent reference points;
    - Locations of photo-points, sampling and monitoring sites; and
    - An analysis of any changes to the mitigation plan that occurred during construction.

Two copies of the Record Report shall be sent to Ecology's 401/CZM Federal Project Coordinator within 60 days of completing construction, and prior to December 1<sup>st</sup> of the year construction is completed, unless approval is obtained in advance from Ecology. The project monitoring period shall commence with Ecology's acceptance of the Record Report.

c. Field Supervision:

- I. The wetland mitigation implementation shall be field-supervised by a qualified wetland ecologist to ensure that plants are appropriately installed.
  1. The supervising wetland ecologist shall conduct a pre-construction meeting with construction personnel.
  2. All construction personnel shall read this order and sign the attached form indicating that they understand the conditions contained herein. The signed forms shall be submitted to Ecology's 401/CZM Federal Project Coordinator within three (3) days of construction.

d. Permanent Protection: The Applicant shall provide documentation showing the means of permanent protection for the mitigation sites (such as a property deed showing City ownership, conservation easement or similar) to Ecology's 401/CZM Federal Project Coordinator within 60 days of completing construction, and in no case later than December 30, 2007, unless approval is obtained in advance from Ecology.

e. Performance Standards: The performance standards for the wetland mitigation shall be as listed in the January 27, 2006, *Conceptual Wetland Compensation Plan for Magnuson Park Phase 2 Development, Seattle, Washington* (Mitigation Plan). The performance standards specify how the goals and objectives of the mitigation plan are to be measured. The Mitigation Plan details include three (3) performance standards for hydroperiod preservation, twelve (12) performance standards for enhancement of habitat functions in existing wetland and upland areas, four (4) performance standards for improvement of habitat linkages, eight (8) performance standards for wetland creation, three (3) performance standards for water quality improvement and three (3) performance standards for creation of educational opportunities.

f. Monitoring: Monitoring to ensure that the project performance standards are met shall be performed as described in the Monitoring Plan. Monitoring reports shall include the elements described in Appendix M, Monitoring Report Checklist from the guidance document, March 2006 *Wetland Mitigation in Washington State – Part 2: Developing Mitigation Plans* (Version 1). In addition, all mitigation monitoring shall take place over a period of ten (10) years, in years 1, 2, 3, 5, 7 and 10. **Two (2) copies of all monitoring reports shall be submitted to Ecology's 401/CZM Federal Project Coordinator at 3190 – 160<sup>th</sup> Avenue SE, Bellevue, WA, 98008-5452.**

- g. Maintenance: Maintenance of the wetland mitigation sites is necessary to ensure that the required performance standards are met. Maintenance shall be performed as described in the Mitigation Plan. Irrigation will likely be necessary from June through mid-October and during periods of below average rainfall in the spring for the first two (2) years following plant installation.
- h. Contingency Measures: The Applicant is responsible for the success of the mitigation measures. Contingency measures are described in Table 11 (pages 60 to 70) of the Mitigation Plan and are detailed in the column titled "Adaptive Management Responses." Contingency measures shall be implemented as soon as monitoring shows that one or more performance standards have not been met.
- i. Year 10 Delineation: The mitigated wetland shall be delineated using the 1997 Washington State Wetlands Identification and Delineation Manual (or as updated) at the end of the 10-year monitoring period to determine the actual area of wetlands created.
- j. Year 10 Rating: The 2004 Washington State Wetlands Rating System shall be applied to the mitigation area at the end of the 10-year monitoring period to determine the classification and rating of the created wetlands.

## **G. Timing Requirements**

- G1. This Order is valid until all compliance requirements in this document have been met.

## **H. Notification Requirements**

- H1. The Applicant shall notify Ecology's 401/CZM Federal Project Coordinator at (425) 649-4318 or (425) 649-7000, fax (425) 649-7098, or in writing, referencing Corps Reference #200600052, Order #4208.
  - a. at least seven (7) days in advance of the pre-construction meeting.
  - b. at least three (3) days prior to the start of construction at the project site.
  - c. within 14 days after completion of construction at the project site.

## **I. Emergency/Contingency Measures**

- I1. The Applicant shall develop a spill prevention and containment plan for all aspects of this project.

- I2. The facility shall have adequate and appropriate spill response materials on hand to respond to emergency release of petroleum products or any other material into waters of the state.
- I3. Fuel hoses, oil drums, oil or fuel transfer valves and fittings, etc., shall be checked regularly for drips or leaks, and shall be maintained and stored properly to prevent spills into state waters.
- I4. Any work that is out of compliance with the provisions of this Order, or conditions causing distressed or dying fish, or any discharge of oil, fuel, or chemicals into state waters, or onto land with a potential for entry into state waters, is prohibited. If these occur, the Applicant shall immediately take the following actions:
  - a. Cease operations at the location of the violation.
  - b. Assess the cause of the water quality problem and take appropriate measures to correct the problem and/or prevent further environmental damage.
  - c. Notify Ecology of the failure to comply. All oil spills shall be reported immediately to Ecology's 24-Hour Spill Response Team at 1-800-258-5990, **and** within 24 hours of spills or other events to Ecology's 401/CZM Federal Project Coordinator at (425) 649-4318 or (425) 649-7000.
  - d. Submit a detailed written report to Ecology within five (5) days that describes the nature of the event, corrective action taken and/or planned, steps to be taken to prevent a recurrence, results of any samples taken, and any other pertinent information.

Compliance with this condition does not relieve the Applicant from responsibility to maintain continuous compliance with the terms and conditions of this Order or the resulting liability from failure to comply.

- I5. In the event of a discharge of oil, fuel, or chemicals into state waters, or onto land with a potential for entry into state waters, containment and cleanup efforts shall begin immediately and be completed as soon as possible, taking precedence over normal work. Cleanup shall include proper disposal of any spilled material and used cleanup materials.

#### **J. Appeal Process**

You have the right to appeal this Order to the Pollution Control Hearings Board. Pursuant to chapter 43.21B RCW, your appeal must be filed with the Pollution Control Hearings Board, and served on the Department of Ecology within thirty (30) days of the date of your receipt of this document.

To appeal this Order, your notice of appeal must contain a copy of the Ecology Order you are appealing.

Your appeal must be filed with:

The Pollution Control Hearings Board  
4224 - 6th Avenue SE, Rowe Six, Bldg. 2  
P.O. Box 40903  
Lacey, Washington 98504-0903

Your appeal must also be served on:

The Department of Ecology  
Appeals Coordinator  
P.O. Box 47608  
Olympia, Washington 98504-7608.

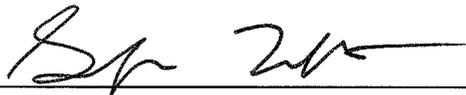

In addition, please send a copy of your appeal to:

Federal Permit Appeals Coordinator  
Department of Ecology  
P.O. Box 47600  
Olympia, Washington 98504-7600

*For additional information: Environmental Hearings Office Website: <http://www.eho.wa.gov>*

Your appeal alone will not stay the effectiveness of this Order. Stay requests must be submitted in accordance with RCW 43.21B.320. These procedures are consistent with Ch. 43.21B RCW.

Dated April 6, 2007 at Bellevue, Washington.
