City of Dayton
 Shoreline Master Program Update
 Columbia County, Washington

August 15, 2014

FEMA floodplain boundaries are approximate and based on Columbia County Flood Insurance Study effective May 4, 1988. Floodplain boundaries also include revised areas detailed in LOMR 97-10-062P effective January 21, 1997.

K:\Dayton_SMP_MXD\Fig 3 Topography Floodplains, and Mapped Hydrography.mxd

FEMA Flood Zone	D	FEMA Flood Hazard Area Description
A		Area subject to flooding by the 1% annual chance flood. No Base Flood Elevations determined.
AE		Area subject to flooding by the 1% annual chance flood. Base Flood Elevations determined.
AH		Area subject to flooding by the 1% annual chance flood. Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined
AO		Area subject to flooding by the 1% annual chance flood. Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
X		Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from the 1% annual chance flood.
Floodway		The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

SOIL TYPES WITHIN SMP JURISDICTION

Symbol	Soil Description
MoA	Mondovi silt loam, 0 to 3 percent slopes
PkA	Patit Creek silt loam, 0 to 3 percent slopes
PIA	Patit Creek gravelly silt loam, 0 to 3 percent slopes
PoA	Patit Creek cobbly silt loam, 0 to 3 percent slopes
Rn	Riverwash
W	Water
Wr	Waha-Rock land complex

WR soil unit noted as "Very Severe" off-road, off-trail erosion hazard due to slope/erodibility. (NRCS Web Soil Survey 2014)

The Touchet River and Patit Creek historical floodplain areas (soil units PoA, PIA, MoA, PkA, & Rn) have a high susceptibility for liquefaction in the event of an earthquake (WDNR 2014).

Priority Species in Patit Creek (WDFW)

Common Name	Use
Rainbow Trout	Occurrence/Migration
Steelhead Trout	Breeding Area
Steelhead	Occurrence
Northwest White-tailed Deer	Regular Concentration

Priority Species in Touchet River (WDFW)

Common Name	Use
Margined Sculpin	Occurrence
Chinook Salmon	Breeding Area
Rainbow Trout	Occurrence/Migration
Steelhead Trout	Breeding Area
Bull Trout	Occurrence/Migration
