Exhibit B

(iv) Moorage at public docks is limited to recreational purposes and shall not extend more than one 24-hour period. Public docks may not be used for commercial or residential moorage.

(b) Residential piers, docks, floats, or mooring buoys may be permitted accessory to a single-family residence, or as common use facilities associated with a subdivision, short subdivision, or multi-family development, in accordance with this chapter and the following limitations:

(i) Residential mooring buoys are preferred over docks and piers on the Puget Sound shoreline. Applicants for a residential dock or pier on the Puget Sound Shoreline must demonstrate why a mooring buoy will not provide adequate moorage for recreational watercraft.

(ii) No more than one pier, dock, float, or mooring buoy for each existing residential lot is permitted.

(iii) New residential developments of two or more units, subdivisions, or short subdivisions shall be limited to one shared dock or pier.

(A) The total number of moorage spaces shall be limited to one moorage space for every dwelling unit up to four. For each two dwelling units after four, one additional moorage space is permitted.

(c) All docks and piers shall be subject to the mitigation requirements per FWRC 15.05.040(1) and will result in no net loss of ecological functions associated with critical saltwater habitat. A preliminary eelgrass survey as specified under the Army Corps of Engineers, Regional General Permit, RGP 6 shall be required for new docks or piers on the Puget Sound shoreline.

(d) No dwelling unit may be constructed on a pier or dock.

(e) No covered pier, covered dock, covered moorage, covered float, or other covered structure is permitted waterward of the ordinary high water mark.

(f) Piers, docks, mooring buoys, or floats shall meet the side and rear yard setbacks of the underlying zoning classification, except in the case of shared facilities, in which case no side yard setback is required.

(g) All piers, docks, mooring buoys, floats, or other such structures shall not, during the course of the normal fluctuations of the elevation of the water body, protrude more than five feet above the surface of the water.

(h) Floats cannot rest on the tidal substrate at any time. Stoppers on the piling anchoring the floats or stub piling must be installed such that the bottom of the floatation device is at least one foot above the level of the substrate.

(i) Any pier, dock, mooring buoy, or float must be constructed out of materials that will not adversely affect water quality. Use of chemically treated wood is prohibited in freshwater lake shorelines. Use of creosote treated wood is prohibited in marine shorelines.

(j) Any new pier or dock must be located generally perpendicular to the shoreline, and oriented to minimize shading impacts to the maximum degree feasible.

(k) Live-aboard vessels are prohibited. Moorage not associated with residential development may not extend greater than one 24-hour period without a lease from Washington Department of Natural Resources.

(l) Pier and dock dimensions and grating, marine shorelines.

(i) Where authorized by FWRC 15.05, piers and docks located on marine shorelines shall be the minimum size required to provide for moorage. Single-family piers or docks shall not exceed 75 feet in length measured perpendicularly from the OHWM. Shared moorage may extend up to 100 feet in length if demonstrated to be
Exhibit B

necessary to provide adequate moorage. Docks that cannot meet this standard may request a review under the variance provisions of this Program.

(ii) The maximum width of each pier or dock shall be six feet.

(iii) The maximum width of walkway ramps shall be four feet and shall be fully grated.

(iv) The decking of all piers and docks shall be designed to allow a minimum of 45% light passage. This may be accomplished through grated decks, space between decking, light prisms, or other means.

(v) Pier skirting is not permitted.

(m) Pier and dock dimensions and grating, lake shorelines.

(i) The maximum waterward intrusion of any portion of any pier or dock shall not extend further waterward than the average length of the piers or docks on lots abutting the location of the new dock as measured perpendicularly from the ordinary high water mark unless an alternative dimension is required in order to prevent impacts to critical areas. In no circumstances shall the maximum waterward intrusion of any portion of any pier or dock extend more than 36 feet from the ordinary high water mark, or the point where the water depth is eight feet below the elevation of the ordinary high water mark, whichever is reached first.

(ii) The maximum width of each pier or dock shall be six feet, or up to eight feet wide on joint use docks where additional mitigation is provided.

(iii) The decking of all piers and docks shall be designed to allow a minimum of 45% light passage. This may be accomplished through grated decks, space between decking, light prisms, or other means.

(n) Floats are limited under the following conditions:

(i) One float per single-family residence and no more than one common use float for each new multi-family development, short subdivision, or subdivision is permitted.

(ii) No portion of a float shall be placed more than 45 feet waterward of the ordinary high water mark on lake shorelines.

(iii) Retrieval lines shall not float at or near the surface of the water.

(iv) No float shall have more than 100 square feet of surface area.

(v) Floats shall use grating on at least 30 percent of their surface to allow light penetration.

(3) Boating facilities – launching ramps, rails, and lift stations.

(a) Launching ramps, rails, and lift stations may be permitted in parks and public access areas in the shoreline residential and urban conservancy environments subject to a shoreline conditional use permit, where authorized by FWRC 15.05.070 through 15.05.090. The following conditions shall apply:

(i) No portion of a launching ramp, rail, or lift station shall be placed more than 60 feet waterward of the ordinary high water mark.

(ii) All portions of a launching ramp, rail, or lift station shall be placed at a depth not to exceed eight feet below the ordinary high water mark.

(iii) Launching rails or ramps shall be anchored to the ground through the use of tie-type construction. Asphalt, concrete, or other ramps, which solidly cover the bottom or bed of a waterbody, are prohibited.

(iv) No more than one launching ramp, rail, or lift station per shoreline development shall be permitted.

(v) Launching ramps, rails, or lift stations shall not be permitted for shoreline developments that have an existing pier, dock, float, mooring buoy, or other functional
moorage. Piers, docks, floats, or other forms of moorage shall not be permitted for shoreline developments that have existing launching ramps, rails, or lift stations.

(vi) Launching ramps, rails, and lift stations shall be sited and designed to ensure protection of navigation routes and access; shall be aesthetically compatible with or enhance existing shoreline features; and shall be clearly marked and separated from nearby swimming areas.

(vii) On-shore facilities associated with public boating facilities shall provide adequate off-street parking and loading area, and have adequate facilities for handling of sewage and litter.

(4) **Breakwaters, jetties and groins.**

(a) Floating breakwaters are permitted in the shoreline residential and urban conservancy environments, with a conditional use permit, when the following conditions apply:

(i) Floating breakwaters may be allowed if necessary to protect a public boat launch, when no other alternative with less impact to the environment is feasible.

(ii) When permitted, development of floating breakwaters shall include mitigation measures consistent with the chapter as to ensure no net loss of ecological function.

(iii) Non-floating breakwaters are prohibited.

(b) Jetties are prohibited within all shoreline environments in the city.

(c) Groins are prohibited in all shoreline environments in the city.

(5) **Dredging and filling.**

(a) **Dredging:**

(i) Dredging activities in shoreline residential or urban conservancy environments require a conditional use permit. Dredging is not permitted in the natural environment.

(ii) Dredging activities are allowed only where necessary to protect public safety or for shoreline restoration activities.

(iii) Dredging is allowed only where an alternative alignment that would not require dredging is not feasible.

(iv) Where allowed, dredging operations must be scheduled so as to not damage shoreline ecological functions or processes.

(v) Where allowed, dredging operations shall avoid and minimize significant ecological impacts to the greatest extent feasible, and shall be mitigated as required by this chapter.

(vi) Siting and design of new development shall avoid the need for new and maintenance dredging.

(vii) Dredging for fill materials shall be prohibited, except for projects associated with MTCA or CERCLA remediation actions, habitat restoration, or any other significant restoration effort approved by a shoreline conditional use permit. In such instances, placement of dredged fill material must be waterward of the OHWM.

(b) **Filling:**

(i) Fill activities waterward of the ordinary high water mark shall only be allowed with a shoreline conditional use permit in association with allowed (permitted) water dependent use developments; public access; cleanup and disposal of contaminated sediments as part of an interagency environmental clean-up plan; disposal of dredged material in accordance with DNR Dredged Material Management Program; or expansion or alteration of transportation facilities of statewide significance currently located on the shoreline (if alternatives to fill are shown not feasible). Fill
Exhibit B

waterward of the ordinary high water mark associated with non-water dependent uses shall be prohibited.

(ii) Fill waterward of ordinary high water mark needed to support the following water dependent uses may be allowed through a conditional use permit in the shoreline residential and urban conservancy environments:
   (A) Public access;
   (B) Expansion, alteration, or repair of transportation facilities currently located within the shoreline;
   (C) Mitigation actions;
   (D) Environmental, ecological, or watershed restoration projects;
   (E) Beach nourishment or enhancement projects; and
   (F) Soft shore bank stabilization projects.

(iii) Permitted fill activities must comply with the following standards:
   (A) Demonstration that alternatives to fill are not feasible;
   (B) Demonstration that fill shall be deposited so as to minimize disruption of normal surface and ground water passage;
   (C) Demonstration that fill materials shall be of such quality that it will not adversely affect water quality;
   (D) Demonstration that fill shall allow surface water penetration into the ground water supply, where such conditions existed prior to the fill; and
   (E) Demonstration that fill timing will minimize damage to water quality and aquatic life.

(iv) Fill, except for beach nourishment, shall be prohibited in areas of high shoreline erosion potential.

(v) Fill located waterward of the ordinary high water mark that results in a net loss of shoreline function is prohibited.

15.05.060 Environmental designations.

(1) Purpose and establishment of designations.
   (a) The purpose of the designations is to differentiate between areas whose geographical, hydrological, topographical, or other features imply differing objectives regarding their use and future development.

   Each environment designation represents a particular emphasis in the type of uses and the extent of development that should occur within it. The environmental designation system is designed to encourage uses in each environment that enhance or are compatible with the character of the environment, while at the same time requiring reasonable standards and restrictions on development so that the character of the environment is not adversely impacted.

   (b) Names of environment designations. In order to accomplish the purpose of this title, environmental designations have been established as follows:

      (i) Shoreline residential.
      (ii) Urban conservancy.
      (iii) Natural.

   (c) Limits of environment designations. Each environment designation shall consist of:

      (i) The entire water body within city jurisdiction, including all water below the surface, the land below the water body, the space above the water body, and the shorelands associated with the water body. On the city’s marine shoreline, environment
Exhibit B

designations shall extend waterward from the ordinary high water mark to the line of extreme low tide.

(ii) The shoreline areas within 200 feet of the ordinary high water mark and additional upland areas where associated wetlands and floodplains extend beyond 200 feet from the ordinary high water mark.

(d) Establishment of designations.

(i) The written descriptions of the boundaries of the shoreline environment designations as adopted by ordinance shall constitute the official legal descriptions of the boundaries of those environment designations.

(ii) The official maps prepared by the city pursuant to Chapter 173-26 WAC shall constitute the official descriptions of the limits of all shorelands in the city of Federal Way as defined by RCW 90.58.030 and FWRC 15.05.030.

(iii) The department may, from time to time, as new or improved information becomes available, modify the official maps described in subsection (1)(d)(ii) of this section consistent with state guidelines to more accurately represent, clarify, or interpret the true limits of the shorelines defined herein.

(e) Location of boundaries.

(i) Boundaries indicated as following streets, highways, roads, and bridges shall be deemed to follow the centerline of such facilities unless otherwise specified.

(ii) Boundaries indicated as following railroad lines and transmission lines shall be deemed to follow the centerline of such rights-of-way or easements unless otherwise specified.

(iii) Where different environmental designations have been given to a tributary and the main stream at the point of confluence, the environmental designation given to the main stream shall extend for a distance of 200 feet up the tributary.

(iv) In case of uncertainty as to a wetland or environment boundary, the director of community development services shall determine its exact location pursuant to the criteria of WAC 173-22-040 and RCW 90.58.030, and the provisions of this title. (Ord. No. 99-355, § 3, 11-16-99; Ord. No. 98-323, § 3, 12-1-98. Code 2001 § 18-164.)

15.05.070 Summary of uses, approval criteria, and process.

(1) Uses not addressed in the program shall be conditional uses.

(2) Specific regulations for each use/development are provided in subsequent sections for Shoreline Residential (FWRC 15.05.080), Urban Conservancy (FWRC 15.05.090), and Natural (FWRC 15.05.100) environments. All permitted and conditional uses may not appear in the permitted use table (FWRC 15.05.070(5)). In cases where uses are not listed, or conflicts exist with other section(s) of the Program, the text provisions shall control.

(3) Prohibited uses.

(a) The following uses are prohibited in all shoreline environments:

(i) Commercial agriculture.

(ii) Aquaculture.

(iii) Forest practices.

(iv) Industrial uses.

(v) Mining.

(b) Additional uses are prohibited in specific shoreline environments, as detailed by the permitted use table and FWRC 15.05.080, 15.05.090, and 15.05.100.

(4) Prohibited shoreline modifications.
(a) The following shoreline modifications are prohibited in all shoreline environments:
   (i) Jetties.
   (ii) Groins.

(b) Additional shoreline modifications are prohibited in specific shoreline environments, as detailed by the permitted use table and FWRC 15.05.080, 15.05.090, and 15.05.100.

(5) Permitted use table: The following table summarizes the permitted, conditional, and prohibited uses for each shoreline environment.

<table>
<thead>
<tr>
<th>Shoreline Modification</th>

P = Allowed as exempt from permitting or permitted with substantial development permit
C = May be allowed with shoreline conditional use permit
X = Prohibited

1. Includes bulkheads, bio-engineered erosion control projects, and other shoreline stabilization activities.
2. Soft shore stabilization is permitted and hard armoring (e.g. bulkheads, rip rap) is subject to a shoreline conditional use permit.
3. Public piers and docks are allowed with a CUP.
4. Floating breakwaters are allowed with a shoreline conditional use permit, and only when used to protect a public boat launch. Non-floating breakwaters are prohibited.
5. Dredging and all fill waterward of the OHWM requires a conditional use permit.
6. Solid waste transfer stations and cellular towers are prohibited in all shoreline environments.
7. Parking as a primary use is prohibited in all shoreline environments, but allowed if serving an allowed shoreline use.
8. Multi-family residential development is prohibited within the Natural environment.
9. Non-water oriented recreational development is prohibited in the Natural environment.

(6) Standards table: The following table summarizes siting, design, and dimensional standards of this Program, as specified within FWRC 15.05.040,
Exhibit B

15.05.050, 15.05.080, 15.05.090, 15.05.100 for general shoreline regulations, shoreline modifications, and shoreline uses.

### Pier and dock dimensions, lake shorelines

|                       | Residential piers and docks: maximum waterward intrusion: based on length of nearest existing docks on either side of the proposed dock; never to exceed 36 feet from OHWM or length at 8 feet of depth below OHWM, whichever is reached first |
|                       | 6-foot maximum dock width (8-foot for joint use) |

### Pier and dock dimensions, marine shorelines

|                       | Maximum waterward intrusion from OHWM 75-100 feet depending on use |
|                       | 6-foot maximum dock width |
|                       | Minimum 45% transparency of decking |

### Float dimensions and standards

|                       | Maximum waterward intrusion: 45 feet from OHWM on lakes |
|                       | Maximum surface area: 100 SF |
|                       | Use of grating on at least 30% of surface area |

### Boating Facilities: Launching ramps, trails, and lift stations (FWRC 15.05.050(3))

|                       | No more than 60 feet waterward from OHWM |
|                       | No more than 8 feet below OHWM |
|                       | No more than 1 ramp per shoreline development |
|                       | Shall not be allowed for developments with existing pier, dock, float, or other functional moorage. Piers, docks, floats, or other forms of moorage shall not be permitted for developments with existing launch facilities. |

N/A (Prohibited)
1. Maximum heights may be increased pursuant to the Shoreline Environment-specific regulations of this Program (FWRC 15.05.080(3), 15.05.090(3), and 15.05.100(3)).

2. Please refer to the Shoreline Environment-specific regulations of this Program for additional detail related to residential setbacks, including exceptions or modifications to the standard minimum setback (FWRC 15.05.080(3), 15.05.090(3), and 15.05.100(3)).

3. See additional review and approval criteria and design requirements in FWRC 15.05.050(1).

15.05.080 Shoreline residential environment.

(1) Purpose. The purpose of the “shoreline residential” environment is to accommodate residential development and appurtenant structures that are consistent with this chapter. An additional purpose is to provide appropriate public access and recreational uses.

(2) Designation criteria. Designation criteria for the shoreline residential environment are provided in the city’s shoreline master program.

(3) General requirements.

(a) Development waterward of the ordinary high water mark is prohibited except water dependent recreational uses, permitted shoreline modifications, and public utilities.

(b) No structure shall exceed the height allowed by the underlying zoning or 35 feet above average grade level, whichever is less.

(i) This requirement may be modified if the view of any neighboring residences will not be obstructed, if permitted by the applicable provisions of the underlying zoning, and if the proposed development is water-related or water-dependent. For any proposed structure with a height exceeding 35 feet, a view analysis shall be completed and approved by the City to ensure that visual public access is not affected consistent with FWRC 15.05.040(7).

(c) All development shall be required to provide adequate surface water retention, erosion control, and sedimentation facilities during the construction period.

(d) Setbacks. Development shall maintain a minimum shoreline setback of the first 50 feet of property landward from the ordinary high water mark, or other designated minimum setback necessary to protect designated critical areas per FWRC 15.05.040(4), whichever is greater. This minimum setback area shall be retained as a vegetation conservation area, subject to provisions referenced in subsection (e).

(e) Vegetation conservation area. The required setback area shall be considered a vegetation conservation area. Within the vegetation conservation area, no more than 30 percent of the area with existing native shoreline vegetation shall be cleared, and a minimum of 60 percent of existing native trees shall be retained. Trees determined by the city to be hazardous or diseased may be removed. Additionally, the director may allow removal of vegetation exceeding that described above where an applicant agrees to replacement plantings that are demonstrated to provide greater benefit to shoreline ecological processes than would be provided by strict application of this section.

(f) Impact mitigation. All developments and uses shall result in no net loss of ecological functions and shall be consistent with the impact mitigation requirements of 15.05.040(1).

(g) Collection facilities to control and separate contaminants shall be required where stormwater runoff from impervious surfaces would degrade or add to the pollution of recipient waters of adjacent properties.
(h) All development in the shoreline residential area must comply with applicable regulations identified within the general development standards, shoreline modifications, and all other applicable sections of this chapter.

(4) Shoreline modifications.

(a) Allowed modifications to the shoreline within shoreline residential designated areas include the following:

(i) Shoreline stabilization. Allowed within the shoreline residential designated areas under the requirements imposed by FWRC 15.05.040 and 15.05.050(1).

(ii) Piers and docks. Allowed within shoreline residential designated areas under the requirements imposed by FWRC 15.05.040 and 15.05.050(2).

(iii) Mooring buoys and floats. Allowed within shoreline residential designated areas under the requirements imposed by FWRC 15.05.040 and 15.05.050(2).

(iv) Boating Facilities - launching ramps, rails, and lift stations. Permitted with a conditional use permit in parks and public access areas within the residential environment under the requirements imposed by FWRC 15.05.040 and 15.05.050(3).

(v) Breakwaters. Floating breakwaters are allowed within the shoreline residential areas with a shoreline conditional use permit under the requirements imposed by FWRC 15.05.040 and 15.05.050(4).

(vi) Dredging and filling. Allowed within shoreline residential designated areas with a shoreline conditional use permit under the requirements imposed by FWRC 15.05.040 and 15.05.050(5).

(b) Prohibited modifications to the shoreline within shoreline residential designated areas include the following:

(i) Jetties and groins.

(5) Shoreline uses.

(a) Allowed uses within shoreline residential designated areas include the following:

(i) Residential development. Single-family residential use shall be a priority use in the shoreline environment. Single-family and multiple-family residential development, accessory dwelling units, and home occupations may be permitted in the shoreline residential environment subject to the following:

(A) The proposed use is permitted in the underlying zone classification.

(B) Residential development is prohibited waterward of the ordinary high water mark.

(C) Setbacks.

(i) Single-family residential development on marine shorelines shall maintain a minimum shoreline setback of 50 feet from the ordinary high water mark. Single-family residential development on lake shorelines shall maintain a minimum setback behind the stringline setback or 50 feet from the ordinary high water mark, whichever is greater. If the site contains one or more designated critical areas, the setback shall be the minimum necessary to protect such designated critical areas per FWRC 15.05.040(4), or the stringline setback, or 50 feet from the ordinary high water mark, whichever is greater. Where critical area setbacks do not apply, the standard 50 foot minimum setback may be modified pursuant to the following exception:

(a) If single-family residential development is proposed on a lot where properties on at least one side of the lot are developed in single-family residences located less than 50 feet from the ordinary high water mark, then the proposed residential development may be located the same distance from the ordinary high water mark as the adjacent residences (using the stringline setback method as...
Exhibit B

defined in FWRC 15.05.030), but shall in no case be closer than 30 feet from the ordinary high water mark.

(ii) Multi-family residential development on marine shorelines shall maintain a minimum setback of 75 feet from the ordinary high water mark. Multi-family residential development on lake shorelines shall maintain a minimum setback behind the stringline setback or 75 feet from the ordinary high water mark, whichever is greater. If the site contains one or more designated critical areas, the setback shall be the minimum necessary to protect such designated critical areas per FWRC 15.05.040(4), or the stringline setback, or 75 feet from the ordinary high water mark, whichever is greater. Where critical area setbacks do not apply, the standard 75-foot minimum setback may be modified pursuant to the following exception:

(a) If multi-family residential development is proposed on a lot where properties on at least one side of the lot are developed in multi-family residential uses located less than 75 feet from the ordinary high water mark, then the proposed residential development may be located the same distance from the ordinary high water mark as the adjacent residential uses (using the stringline setback method as defined in FWRC 15.05.030) but shall be no closer than 50 feet from the ordinary high water mark.

(D) Public access. In review of all shoreline permits or developments of more than four residential lots or dwelling units, or subdivision of land into more than four lots, consideration of public access shall be required consistent with FWRC 15.05.040(7).

(E) Where allowed consistent with underlying zoning, subdivision of land shall be configured through the orientation of lots to:

(I) Prevent the loss of ecological functions at full build-out by providing adequate developable space outside of setbacks; and

(II) Avoid the need for new shoreline stabilization and flood hazard reduction measures.

(ii) Accessory structures. Residential accessory structures may be placed within the required shoreline setback, provided:

(A) No accessory structure shall cover more than 150 square feet.

(B) No more than 300 square feet of accessory structures shall be allowed.

(C) No accessory structure shall exceed eight feet in height.

(D) Existing native shoreline vegetation within the shoreline setback is conserved as per general requirements (3)(d) and (e).

(iii) Recreational development. Recreational development may be permitted in the shoreline residential environment subject to the general requirements of this chapter, provided:

(A) The recreational development is permitted in the underlying zone.

(B) The facilities are located, designed, and operated in a manner consistent with the purpose of the residential environment.

(C) Recreational development that provides public access to and use of the water shall be given priority.

(D) Recreational development shall provide mitigation consistent with the general requirements of this chapter and shall lead to no net loss of ecological functions.

(E) Swimming areas shall be separated from boat launch areas.
Exhibit B

(F) Boat launching facilities may be developed, subject to a shoreline conditional use permit, provided:
   (I) The parking and traffic generated by such a facility can be safely and conveniently handled by the streets and areas serving the proposed facility.
   (II) The facility will not be located on a beach area or cause net loss in shoreline function.

(G) Upland facilities constructed in conjunction with a recreational development shall be set back and/or sited to avoid adverse impacts to the functions of the shorelines of the city.

(H) Public pedestrian and bicycle pathways shall be permitted adjacent to water bodies. Such trails and pathways must be made of pervious materials, if feasible.
   (I) Public contact with unique and fragile areas shall be permitted where it is possible without destroying the natural character of the area.
   (J) Water viewing, nature study, recording, and viewing shall be accommodated by space, platforms, benches, or shelter consistent with public safety and security.

(iv) Utilities. Utility facilities, with the exception of cellular towers, solid waste transfer stations, and production and processing facilities, may be permitted in the shoreline residential environment subject to the requirements of this chapter, provided:
   (A) No other practicable alternative location outside of the shoreline jurisdiction with less impact to the environment is available for the facility.
   (B) Utility and transmission facilities shall:
      (I) Avoid disturbance of unique and fragile areas.
      (II) Avoid disturbance of wildlife spawning, nesting, and rearing areas.
      (III) Conserve native shoreline vegetation, particularly forested areas, to the maximum extent possible.
   (IV) Overhead utility facilities shall not be permitted in public parks, monuments, scenic, recreation, or historic areas.
   (V) Minimize visual impact.
   (VI) Harmonize with or enhance the surroundings.
   (VII) Not create a need for shoreline protection.
   (VIII) Utilize to the greatest extent possible natural screening.
   (IX) Mitigate for unavoidable impacts to achieve no net loss of shoreline ecological functions.
   (X) Be located in existing utility and transportation rights-of-way whenever feasible.

(C) The construction and maintenance of utility facilities shall be done in such a way so as to:
   (I) Maximize the preservation of natural beauty and the conservation of resources.
   (II) Minimize scarring of the landscape.
   (III) Minimize siltation and erosion.
   (IV) Protect trees, shrubs, grasses, natural features, and topsoil.
   (V) Avoid disruption of critical aquatic and wildlife stages.

(D) Rehabilitation of areas disturbed by the construction and/or maintenance of utility facilities shall:
   (I) Be accomplished as rapidly as possible to minimize soil erosion and to maintain plant and wildlife habitats.
   (II) Utilize native trees and shrubs.
Exhibit B

(E) Solid waste transfer stations are prohibited within shoreline jurisdiction.

(F) Cellular or wireless towers are prohibited within shoreline jurisdiction.

(v) Transportation and parking facilities. Transportation and parking, except parking facilities associated with detached single-family development, shall conform to the following minimum requirements:

(A) Transportation corridors shall be developed consistent with the Transportation Element of the Federal Way Comprehensive Plan (FWCP) and designed to provide the best service with the least possible impact on shoreline ecological function. Impacts to functions shall be mitigated to achieve no net loss of ecological functions.

(B) New road construction shall be the minimum necessary to serve a permitted shoreline use.

(C) New public transportation facilities shall provide turnout areas for scenic stops where feasible.

(D) Parking facilities serving individual buildings on the shoreline shall be located landward from the principal building being served, except when the parking facility is within or beneath the structure and adequately screened, or in cases when an alternate location would have less environmental impact on the shoreline.

(E) New surface transportation facilities not related to and necessary for the support of shoreline activities shall be located outside the shoreline jurisdiction if possible, or set back from the ordinary high water mark far enough to make protective measures such as riprap or other bank stabilization, landfill, or substantial site regrade unnecessary.

(F) Maintenance, repair, replacement, or other roadway improvements (including but not limited to widening to serve existing or projected volumes, installation of curb and gutter, sidewalks, illumination, signals) to existing surface transportation facilities shall be allowed within shoreline residential designated areas. Improvements that create a need for protective measures such as riprap or other bank stabilization, landfill, or substantial site regrade shall not be permitted unless no alternative exists and impacts to shoreline ecological functions are mitigated.

(G) Any new development or expansion of existing development creating greater than six total parking stalls must meet the water quality standards required by the King County Surface Water Manual for "high use" sites and "resource stream protection."

(H) Outdoor parking area perimeter, excluding entrances and exits, must be maintained as a planting area with a minimum width of five feet.

(I) One live tree with a minimum height of four feet shall be required for each 30 linear feet of planting area.

(II) One live shrub of one-gallon container size, or larger, for each 60 linear inches of planting area shall be required.

(III) Additional perimeter and interior landscaping of parking areas may be required, at the discretion of the director, when it is necessary to screen parking areas or when large parking areas are proposed.

(I) Parking as a primary use in shoreline jurisdiction shall be prohibited.

(J) Parking in the shoreline jurisdiction shall directly serve a permitted shoreline use and environmental and visual impacts shall be minimized.
Exhibit B

(K) Transportation and parking facilities for subdivision, multi-family residential, and commercial uses shall incorporate low impact development (LID) designs to minimize stormwater runoff.

(L) Transportation facilities shall not adversely impact existing or planned water dependent uses.

In addition to those uses prohibited in all shoreline environments by FWRC 15.05.070(3) of this chapter, the following uses are prohibited uses within shoreline residential designated areas:

(i) Office and commercial development.

15.05.090 Urban conservancy environment.

(1) Purpose. The purpose of the “urban conservancy” environment is to protect and restore ecological functions of open space, flood plain, and other sensitive lands where they exist in urban and developed settings, while allowing a variety of compatible uses. Priority should be given to water-oriented uses over non-water-oriented uses in the urban conservancy environment. Residential development and appurtenant structures should be accommodated in the urban conservancy environment when consistent with existing land use and zoning, and when consistent with this chapter. An additional purpose is to provide appropriate public access and recreational uses.

(2) Designation criteria. Designation criteria for the urban conservancy environment are provided in the city’s shoreline master program.

(3) General requirements.

(a) Development waterward of the ordinary high water mark is prohibited except water dependent recreational uses, permitted shoreline modifications, and public utilities.

(b) No structure shall exceed the height allowed by the underlying zoning or 35 feet above average grade level, whichever is less. This requirement may be modified if the view of any neighboring residences will not be obstructed, if permitted by the applicable provisions of the underlying zoning, and if the proposed development is water-related or water-dependent. For any proposed structure with a height exceeding 35 feet, a view analysis shall be completed and approved by the City to ensure that visual public access is not affected consistent with FWRC 15.05.040(7).

(c) All development shall be required to provide adequate surface water retention and sedimentation facilities during the construction period.

(d) Setbacks. Development shall maintain a minimum shoreline setback of the first 50 feet of property landward from the ordinary high water mark or other designated minimum setback necessary to protect designated critical areas per FWRC 15.04.040(4), whichever is greater. This minimum setback area shall be retained as a vegetation conservation area, subject to provisions referenced in subsection (e).

(e) Vegetation conservation area. The required setback area shall be considered a vegetation conservation area. Within the vegetation conservation area, no more than 30 15 percent of the area with existing native shoreline vegetation shall be cleared, and a minimum of 70 80 percent of existing native trees shall be retained. Trees determined by the city to be hazardous or diseased may be removed. Additionally, the director may allow removal of vegetation exceeding that described above where an applicant agrees to replacement plantings that are demonstrated to provide greater benefit to shoreline ecological processes than would be provided by strict application of this section.

(f) Impact mitigation. All developments and uses shall result in no net loss of ecological functions and shall be consistent with the impact mitigation requirements of...
15.05.040(1).

(4) **Shoreline modifications.**

(a) Allowed modifications to the shoreline within urban conservancy designated areas include the following:

(i) **Shoreline Stabilization.** Allowed within urban conservancy designated areas and the requirements imposed by FWRC 15.05.040 and 15.05.050(1).

(ii) **Piers and docks.** Allowed within urban conservancy designated areas under the requirements imposed by FWRC 15.05.040 and 15.05.050(2).

(iii) **Mooring buoys and floats.** Allowed within urban conservancy designated areas under the requirements imposed by FWRC 15.05.040 and 15.05.050(2).

(iv) **Boating facilities - launching ramps, rails, and lift stations.** Permitted with a shoreline conditional use permit in parks and public access areas within the urban conservancy environment under the requirements imposed by FWRC 15.05.040 and 15.05.050(3).

(v) **Breakwaters.** Floating breakwaters are allowed within the urban conservancy designated areas with a shoreline conditional use permit under the requirements imposed by FWRC 15.05.040 and 15.05.050(4).

(vi) **Dredging and filling.** Allowed within urban conservancy designated areas with a shoreline conditional use permit under the requirements imposed by FWRC 15.05.040 and 15.05.050(5).

(b) Prohibited modifications to the shoreline within urban conservancy designated areas include the following:

(i) Jetties and groins.

(5) **Shoreline Uses.**

(a) Allowed uses within urban conservancy designated areas include the following:

(i) **Residential development.** Allowed within urban conservancy designated areas under the requirements imposed within FWRC 15.05.080(5)(a)(i), with the following additional restrictions:

(A) **Setbacks.** Residential development on marine shorelines shall maintain a minimum setback of 50 feet from the ordinary high water mark, or other established minimum setback necessary to protect designated critical areas per FWRC 15.05.040(4), whichever is greater. Residential development on lake shorelines shall maintain a setback behind the stringline setback, or 50 feet from the ordinary high water mark, or other established minimum setback necessary to protect designated critical areas per FWRC 15.05.040(4), whichever is greater. Exceptions to minimum setback requirements included in FWRC 15.05.080(5)(a)(i)(C), for both single-family and multi-family development, shall apply.

(B) **Accessory structures.** Allowed within urban conservancy designated areas under the requirements imposed by FWRC 15.05.080(5)(a)(ii).

(ii) **Recreational development.** Recreational development may be permitted in the urban conservancy environment subject to the general requirements of this chapter and under the requirements imposed by FWRC 15.05.080(5)(a)(iii).

(iii) **Utilities.** Allowed within urban conservancy designated areas under the requirements and restrictions imposed by FWRC 15.05.080(5)(a)(iv).

(iv) **Transportation and parking facilities.** Allowed within urban conservancy designated areas under the requirements imposed by FWRC 15.05.080(5)(a)(v).
Exhibit B

(v) Office and commercial development. Office and commercial development may be allowed with conditional use approval in the urban conservancy environment subject to the requirements of this chapter, provided:

(A) The office or commercial use or activity is permitted in the underlying zoning classification.

(B) Public access is provided consistent with the requirements of FWRC 15.05.040(7).

(C) Non-water-oriented office and commercial uses are prohibited unless they meet one or more of the following criteria:

(I) The use is part of a mixed-use project that includes water-dependent uses and provides a significant public benefit such as providing public access and/or ecological restoration; or navigability is severely limited at the proposed site.

(II) In areas designated for commercial use, non-water-oriented commercial development may be allowed if the site is physically separated from the shoreline by another property or public right-of-way.

(III) Office and commercial development will not result in a net loss of shoreline ecological functions or have significant adverse impact to other shoreline uses, resources, and values provided for in RCW 90.58.020 such as navigation, recreation, and public access.

(D) Office and commercial development on marine shorelines shall maintain a setback of 75 feet from the ordinary high water mark, or other established minimum setback necessary to protect designated critical areas per FWRC 15.05.040(4), whichever is greater. Office and commercial development on lake shorelines shall maintain a setback behind the stringline setback, or 75 feet from the ordinary high water mark, or other established minimum setback necessary to protect designated critical areas per FWRC 15.05.040(4), whichever is greater. The minimum setback may be reduced using the stringline method, when applicable, but in no case shall the minimum setback be less than 50 feet from the ordinary high water mark.

(E) Piers, docks, moorages, buoys, floats, and launching facilities will not be permitted in conjunction with office or commercial development; unless they are developed as part of on-site public access to the shoreline.

(F) Additional water quality standard must be met as per FWRC 15.05.040(3).

15.05.100 Natural environment.

(1) Purpose. The purpose of the "natural environment" is to protect those shoreline areas that are relatively free of human influence, or that include intact or minimally degraded shoreline functions intolerant of human use. These systems require that only very low intensity uses be allowed in order to maintain ecological functions and ecosystem-wide processes. Consistent with the policies of the designation, the city shall plan for restoration of degraded shorelines within this environment.

(2) Designation criteria. Designation criteria for the natural environment are provided in the city's shoreline master program.

(3) General requirements.

(a) Development waterward of the ordinary high water mark is prohibited except water dependent recreational uses and public utilities.

(b) No structure shall exceed the height allowed by the underlying zoning or 35 feet above average grade level, whichever is less. This requirement may be modified if
the view of any neighboring residences will not be obstructed, if permitted by the applicable provisions of the underlying zoning, and if the proposed development is water-related or water-dependent. For any proposed structure with a height exceeding 35 feet, a view analysis shall be completed and approved by the City to ensure that visual public access is not affected consistent with FWRC 15.05.040(7).

(c) All development shall be required to provide adequate surface water retention and sedimentation facilities during the construction period.

(d) Setbacks. Development shall maintain a minimum shoreline setback of the first 100 feet of property landward from the ordinary high water mark, or other established minimum setback necessary to protect designated critical areas per FWRC 15.05.040(4), whichever is the greater setback as a vegetation conservation area subject to provisions referenced in subsection (e).

(e) Vegetation conservation area. The required setback area shall be considered a vegetation conservation area: Within the vegetation conservation area, no native shoreline vegetation shall be cleared, and all existing native trees shall be retained. Trees determined by the city to be hazardous or diseased may be removed. Additionally, the director may allow removal of vegetation exceeding that described above where an applicant agrees to replacement plantings that are demonstrated to provide greater benefit to shoreline ecological processes than would be provided by strict application of this section.

(f) Impact mitigation. All developments and uses shall result in no net loss of ecological functions and shall be consistent with the impact mitigation requirements of FWRC 15.05.040(1).

(4) Shoreline modifications. The following shoreline modifications are prohibited within the natural designated shoreline areas:

(a) Shoreline stabilization;
(b) Piers, docks, moorages, buoys, and floats;
(c) Boating facilities - launching ramp, rails, and lift stations;
(d) Breakwaters, jetties, and groins; and
(e) Dredging and filling.

(5) Shoreline Uses.

(a) Allowed uses within natural designated areas include:

(i) Residential development. Multi-family residential uses are prohibited in the natural environment. Single-family residential development and residential accessory structures may be permitted in the natural environment with a shoreline conditional use permit with the following additional restrictions:

(A) Allowed only where single-family residential development is permitted in the underlying zone classification.

(B) Single-family residential development is prohibited waterward of the ordinary high water mark.

(ii) Recreational development. Allowed within the natural designated areas subject to the limitations of FWRC 15.05.100(4) and provided:

(A) The recreational development is permitted in the underlying zone.

(B) Non-water-oriented recreational uses and development are prohibited within the natural designated areas.

(C) The recreational development is located, designed, and operated in a manner consistent with the purpose of the natural environment with a focus on passive recreation.
Exhibit B

(D) Recreation development shall provide mitigation consistent with the general requirements of this chapter and shall lead to no net loss of shoreline ecological functions.

(E) The parking and traffic generated by such a facility can be safely and conveniently handled by the streets and areas serving the proposed development.

(F) Upland facilities constructed in conjunction with a recreational development shall be set back and/or sited to avoid adverse impacts to the functions of the shorelines of the city.

(G) Public pedestrian and bicycle pathways shall be made of pervious materials.

(iii) Utilities. Allowed within the natural designated areas with a shoreline conditional use permit under the requirements and restrictions imposed within FWRC 15.05.080(5)(a)(iv).

(iv) Transportation and parking facilities. Allowed in the natural environment only when necessary to serve an allowed use and subject to the approval of a conditional use permit. Approved facilities must, at a minimum, meet the requirements and restrictions imposed within FWRC 15.05.080(5)(a)(v).

(v) Low intensity public uses. Low intensity public uses including scientific, historical, cultural, and educational research uses are allowed under the general requirements for the natural environment (FWRC 15.05.100(3)) and provided that ecological impacts are avoided.

(b) In addition to those uses prohibited in all shoreline environments by FWRC 15.05.070(3) of this chapter, the following uses are prohibited uses within natural designated areas:

(i) Boating facilities;
(ii) Multi-family residential development;
(iii) Office and commercial development.

Article III. Administrative Procedures

15.05.110 Shoreline management permit and enforcement procedures, adoption by reference.

The city of Federal Way hereby adopts by reference the following sections or subsections of Chapter 173-27, as amended, of the Washington Administrative Code ("WAC") entitled Shoreline Management Permit and Enforcement Procedures.

WAC:
(1) 173-27-020 Purpose
(2) 173-27-040 Developments exempt from substantial development permit requirement
(3) 173-27-130 Filing with department
(4) 173-27-270 Order to cease and desist
(5) 173-27-280 Civil penalty
(6) 173-27-290 Appeal of civil penalty
(7) 173-27-300 Criminal penalty
15.05.120 Permit processing and public notice.

An application for a shoreline development permit shall be made to the department of community development on forms prescribed by the department. Public notice shall be provided as follows:

(1) An application for a substantial development permit requires public notice as prescribed in Process III, Chapter 19.65 FWRC.

(2) An application for a shoreline conditional use permit or shoreline variance requires public notice as prescribed in Process IV, Chapter 19.70 FWRC.
15.05.130 Shoreline exemption.

(1) The purpose of a shoreline exemption is to provide an approval process for uses and activities which do not trigger the need for a substantial development permit, but require compliance with the shoreline guidelines and the goals, policies, and other provisions of the city's shoreline master program. A use or activity that qualifies for an exemption may require a Shoreline Variance (FWRC 15.05.160), or a Shoreline Conditional Use Permit (FWRC 15.05.170). An exemption from the substantial development permit process is not an exemption from compliance with any other applicable regulatory requirements.

(2) To qualify for an exemption, the proposed use, activity, or development must meet the requirements for an exemption as described in WAC 173-27-040.

(3) If the proposed development meets the requirements for an exemption, the applicant shall submit a request for an exemption to the director of community development services for review and approval. The request shall indicate the specific exemption provision from WAC 173-27-040 that is being applied to the development. The city shall review the request and provide a summary of the analysis demonstrating consistency of the project with the Federal Way shoreline master program and the Shoreline Management Act. The city shall prepare a statement of exemption, provided the proposal meets exemption criteria. The burden of proof that a development or use is exempt from the permit process is on the applicant. If any part of the development is not eligible for exemption, then a substantial development permit is required for the entire proposed development.

(a) The director may attach conditions to the approval of exempted developments and/or uses as necessary to assure consistency of the project with the Shoreline Management Act and the Federal Way shoreline master program, per WAC 173-27-040(e). For example, in the case of development subject to a building permit, but exempt from the shoreline permit process, the building official or other permit authorizing official, through consultation with the director, may attach shoreline management terms and conditions to building permits and other permit approvals pursuant to RCW 90.58.140.

(b) Where shoreline development proposals are subject to review, approval, and permitting by a federal or state agency, the director shall prepare a statement of exemption, addressed to the applicant, the federal or state permitting agency, and ecology.

15.05.140 Application requirements.

Complete application. A complete application for a substantial development, shoreline conditional use, or shoreline variance permit shall contain, as a minimum, the following information:

(1) The name, address, and phone number of the applicant. The applicant should be the owner of the property or the primary proponent of the project and not the representative of the owner or primary proponent.

(2) The name, address, and phone number of the applicant's representative if other than the applicant.

(3) The name, address, and phone number of the property owner, if other than the applicant.

(4) Location of the property. This shall, at a minimum, include the property address, parcel number, and identification of the section, township, and range to the nearest
quarter, quarter section, or latitude and longitude to the nearest minute. All applications for projects located in open water areas away from land shall provide a longitude and latitude location.

(5) Identification of the name of the shoreline (water body) that the site of the proposal is associated with. This should be the water body from which jurisdiction of the act over the project is derived.

(6) A general description of the proposed project that includes the proposed use or uses and the activities necessary to accomplish the project.

(7) A general description of the property as it now exists, including its physical characteristics and improvements and structures.

(8) A general description of the vicinity of the proposed project, including identification of the adjacent uses, structures, and improvements, intensity of development, and physical characteristics.

(9) A site development plan consisting of maps and elevation drawings, drawn to an appropriate scale to depict clearly all required information, photographs, and text which shall include:

(a) The boundary of the parcel(s) of land upon which the development is proposed.

(b) The ordinary high water mark of all water bodies located adjacent to or within the boundary of the project. This may be an approximate location provided, that for any development where a determination of consistency with the applicable regulations requires a precise location of the ordinary high water mark the mark shall be located precisely and the biological and hydrological basis for the location as indicated on the plans shall be included in the development plan. Where the ordinary high water mark is neither adjacent to or within the boundary of the project, the plan shall indicate the distance and direction to the nearest ordinary high water mark of a shoreline.

(c) Existing and proposed land contours. The contours shall be at intervals sufficient to accurately determine the existing character of the property and the extent of proposed change to the land that is necessary for the development. Areas within the boundary that will not be altered by the development may be indicated as such and contours approximated for that area.

(d) A delineation of all wetland areas that will be altered or used as a part of the development.

(e) A general indication of the character of vegetation found on the site.

(f) The dimensions and locations of all existing and proposed structures and improvements including but not limited to: buildings, paved or graveled areas, roads, utilities, septic tanks and drainfields, material stockpiles or surcharge, and stormwater management facilities.

(g) Where applicable, a landscaping plan for the project.

(h) Where applicable, plans for development of areas on- or off-site as mitigation for impacts associated with the proposed project shall be included and contain information consistent with the requirements of this section.

(i) Quantity, source, and composition of any fill material that is placed on the site whether temporary or permanent.

(j) Quantity, composition, and destination of any excavated or dredged material.

(k) A vicinity map showing the relationship of the property and proposed development or use to roads, utilities, existing developments, and uses on adjacent properties.

(l) Where applicable, a depiction of the impacts to views from existing residential uses and public areas.
Exhibit B

(m) On all variance applications the plans shall clearly indicate where development could occur without approval of a variance, the physical features and circumstances on the property that provide a basis for the request, and the location of adjacent structures and uses.
(n) Summary of how the proposal meets relevant decisional criteria.
(o) Additional information as requested by the city.
(10) Where applicable, a shoreline assessment and mitigation report prepared by a qualified professional, which at a minimum, includes the following:
(a) Site plan and cross-sections of development and critical areas and critical salmonid habitat identified.
(b) A detailed description of proposed development.
(c) Identification of any species of local importance, priority species, or endangered, threatened, or sensitive species that have documented or observed habitat on or adjacent to the project area.
(d) An assessment of potential impacts the proposal may have on fish and wildlife species, critical areas, and critical salmonid habitats.
(e) A discussion of any federal, state, or local management recommendations, including Washington Department of Fish and Wildlife habitat management recommendations, that have been developed for species or habitats located on or adjacent to project area.
(f) A discussion of mitigation measures that have been implemented to avoid and minimize adverse impacts to fish and wildlife species and habitats, critical areas, and critical salmonid habitat. The mitigation must also include a mitigation plan showing the area of mitigation and detailed mitigation measures, such as habitat features and planting of native vegetation.
(g) A discussion of monitoring, maintenance, and contingency measures to accompany the mitigation plan.

15.05.150 Shoreline substantial development permit.
(1) The purpose of a substantial development permit is to provide an approval process for any development with a total cost or fair market value exceeding $5,718, or any development which materially interferes with the normal public use of the water or shorelines of the state, except those exempted developments set forth in the preceding section, consistent with WAC 173-27-040. The substantial development dollar threshold on the adoption date of this Program is five-thousand seven-hundred and eighteen dollars ($5,718). Under current law, the substantial development dollar threshold will be recalculated every five years by the Washington State Office of Financial Management (OFM). OFM posts updated dollar thresholds in the Washington State Register.
(2) When a substantial development permit is requested, the permit shall be reviewed under the provisions of Process III, Chapter 19.65 FWRC, and the director of community development shall be the final approval authority for the city of Federal Way.
(3) A substantial development permit shall be granted by the director only when the development proposed is consistent with the following:
Exhibit B

(a) Goals, objectives, policies, and use regulations of the Federal Way shoreline master program;
(b) Federal Way comprehensive plan and city code; and
(c) The policies, guidelines, and regulations of the shoreline management act (RCW 90.58, WAC 173-26, and WAC 173-27).

(4) The director may attach conditions to the approval of permits as necessary to assure consistency of the proposal with the above criteria.

15.05.160 Shoreline variance.

(1) The purpose of a shoreline variance is to grant relief to specific bulk, dimensional, or performance standards set forth in the shoreline master program, where there is an extraordinary or unique circumstance relating to the property such that the strict implementation of the shoreline master program would impose unnecessary hardship on the applicant or thwart the policies of the shoreline management act.

(2) When a variance is requested, the substantial development permit, if required, and the variance, shall be reviewed under the provisions of Process IV, Chapter 19.70 FWRC, and the hearing examiner shall be the final approval authority for the city of Federal Way. The Department of Ecology shall be the final approval authority under WAC 173-27-200.

(3) A variance from the standards of the master program may be granted only when the applicant can demonstrate that all the following conditions will apply:

(a) That the strict requirements of the bulk, dimensional, or performance standards set forth in the master program precludes or significantly interferes with a reasonable use of the property not otherwise prohibited by the master program;

(b) That the hardship described above is specifically related to the property and is the result of unique conditions, such as irregular lot shape, size, or natural features, and the application of the master program, and not for example, from deed restriction or the applicant's own actions;

(c) That the design of the project will be compatible with other permitted activities in the area and will not cause adverse effects to adjacent properties or the shoreline environment;

(d) That the variance authorized does not constitute a grant of special privilege not enjoyed by other properties, and will be the minimum necessary to afford relief;

(e) That the public interest will suffer no substantial detrimental effect;

(f) That the public rights of navigation and use of the shorelines will not be adversely affected by the granting of the variance when the proposal is for development located waterward of the ordinary high water mark, or within wetlands, estuaries, marshes, bogs, or swamps; and

(g) That consideration has been given to the cumulative effect of like actions in an area where similar circumstances exist, and whether this cumulative effect would be consistent with shoreline policies or would have substantial adverse effects on the shoreline.

(4) Shoreline variances may not be used to permit a use that is specifically prohibited in an environment, or to vary uses permitted within an environmental designation.

15.05.170 Conditional uses.

(1) The purpose of the conditional use permit is to provide greater flexibility in varying the application of the use regulations of the shoreline master program in a manner which will be consistent with the policies of Chapter 90.58 RCW, particularly where denial of the application would thwart the policies of the Shoreline Management Act.

(2) When a conditional use is requested, the substantial development permit, if required, and the conditional use, shall be reviewed under the provisions of Process IV, Chapter 19.70 FWRC, and the hearing examiner shall be the final approval authority for the city of Federal Way. The Department of Ecology shall be the final approval authority under WAC 173-27-200.

(3) Conditional uses have unique and special characteristics which require a special degree of control to make the uses compatible with other existing or permitted uses in the same environment, and to assure that the use is in the public interest. In authorizing a conditional use permit, special conditions may be attached to the permit by the hearing examiner to prevent undesirable effects or mitigate environmental impacts of the proposed use.

(4) Conditional use permits shall be authorized only when they are consistent with the following criteria:

   (a) The proposed use is consistent with the policies of RCW 90.58.020 and the policies of the shoreline master program;

   (b) The use will not interfere with normal use of public shorelines;

   (c) The use will cause no unreasonable adverse effects on the shoreline or surrounding properties or uses, and is compatible with other permitted uses in the area;

   (d) The public interest will suffer no substantial detrimental effect;

   (e) Consideration has been given to cumulative impact of additional requests for like actions in the area.

(5) Other uses not set forth in the shoreline master program may be authorized through a conditional use permit if the applicant can demonstrate that other uses are consistent with the purpose of the shoreline environmental designation and compatible with existing shoreline improvements, or that extraordinary circumstances preclude reasonable use of the property; however, uses specifically prohibited by the master program may not be authorized.

(Ord. No. 00-375, § 2, 10-3-00; Ord. No. 99-355, § 3, 11-16-99; Ord. No. 98-323, § 3, 12-1-98; Ord. No. 90-38, § 1(24.70.10 – 24.70.50), 2-27-90. Code 2001 § 18.172.)

15.05.180 Final approval of shoreline permits.

(1) The director of community development shall notify the following agencies or persons within five days of the final approval of a shoreline permit and any shoreline variances or conditional uses granted:

   (a) The applicant;

   (b) The state Department of Ecology;

   (c) Any person who has submitted written comments on the application; and

   (d) Any person who has requested notification in writing prior to final approval of the permit.

(2) No work may commence on a site requiring a shoreline substantial development, shoreline variance, or shoreline conditional use permit until 21 days following the "date of filing" or until all review proceedings before the Shoreline Hearings Board have terminated.

City of Federal Way SMP — Title 15 Shoreline Management
Passed by Resolution 10-597, October 19, 2010 with Ecology required changes
Exhibit B

(a) "Date of filing" for a substantial development permit is the date of actual receipt of the decision by the Department of Ecology.

(b) "Date of filing" for a shoreline variance or shoreline conditional use permit shall mean the date the permit decision rendered by the Department of Ecology is transmitted by the department to the City and the applicant/proponent.

15.05.190 Combined hearing authority.

In those cases when development proposed in the shorelines may require a public hearing under the authority of other chapters of this Code, the hearings may be combined.

15.05.200 Appeals.

All appeals of any final permit decision are governed by the procedures established in RCW 90.58.180, RCW 90.58.140(6), and WAC 481-03, the rules and procedures of the Shoreline Hearings Board. All appeals of any final permit decision must be made to the Shoreline Hearings Board within 21 days of the date of filing of the city’s final decision concerning the substantial development permit, or formal approval to revisions of the permit.

15.05.210 Permit revisions.

1. A permit revision is required whenever an applicant proposes substantive changes to the design, terms, or conditions of a project from that which was approved in the permit. When a revision of a shoreline permit is sought, the applicant shall submit detailed plans and text describing the proposed changes in the permit and demonstrating compliance with the minimum standards pursuant to WAC 173-27-100.

2. If the proposed changes are determined by the director to be within the scope and intent of the original permit, and are consistent with the Shoreline Management Act (RCW 90.58), the guidelines in WAC 173-26, and the Federal Way shoreline master program, the revision shall be approved.

3. A new permit shall be required if the proposed revision would constitute development that is beyond the scope and intent of the original approval. "Within the scope and intent of the original approval" means all of the following:

   a. No additional over-water construction is involved except that a pier, dock, or floating structure may be increased by ten percent (10%) over that approved under the original approval; provided that the revision does not exceed the maximum size requirements of this chapter except as authorized under a variance granted for the original development;

   b. Ground area coverage and/or height may be increased a maximum of ten percent over that approved under the original approval; provided that, the revised approval does not authorize development to exceed the height, impervious surface, setback, or any other requirements of this chapter except as authorized under a variance granted for the original development;

   c. Additional or revised landscaping is consistent with any conditions attached to the original approval and with the Federal Way shoreline master program;

   d. The use authorized pursuant to the original approval is not changed; and
(e) The revision will not cause adverse environmental impacts beyond those originally authorized in the approval.

15.05.220 Replacement, alteration, or reconstruction of nonconforming use or development.

(1) Applications for substantial development or building permits to modify a nonconforming use or development, as defined in this chapter, may be approved only if:
   (a) The modifications will make the use or development less nonconforming; or
   (b) The modifications will not make the use or development more nonconforming; and
   (c) Structures that were legally established and are used for a conforming use but which are nonconforming with regard to setbacks, buffers, or yards; area; bulk; height, or density may be maintained and repaired and may be enlarged or expanded provided that said enlargement does not increase the extent of nonconformity by further encroaching upon or extending into areas where construction or use would not be allowed for new development or uses.

(2) An existing use or development, not conforming to existing regulations, which is destroyed, may be replaced (per "replacement structure" as defined in this chapter) as it existed prior to destruction, provided application for required permits is made within one year of destruction.

(3) If a nonconforming use is discontinued for twelve consecutive months or for twelve months during any two-year period, the nonconforming rights shall expire and any subsequent use shall be conforming.

(4) An undeveloped lot, tract, parcel, site, or division of land located landward of the ordinary high water mark which was established in accordance with local and state subdivision requirements prior to the effective date of the act or the Federal Way shoreline master program, but which does not conform to the present lot size standards may be developed if permitted by other land use regulations of the FWRC and so long as such development conforms to all other requirements of the Federal Way shoreline master program and the act.

(5) An existing mechanical improvement, not conforming to existing regulations, which breaks and cannot be repaired may be replaced, provided the replacement is no more nonconforming and application for required permits is made within one year of failure.

15.05.230 Shoreline environment redesignation.

Shoreline environments designated by the master program may be redesignated by the city council upon finding that such redesignation will be consistent with:

(1) The policies of Section 2 of the Shoreline Management Act of 1971.
(2) The goals, objectives, and policies of the shoreline master program.
(3) The designation criteria of the shoreline environment designation requested.

15.05.240 Amendments to this chapter.

Amendments to this chapter shall be pursuant to state review and approval as per WAC 176-26-110 and WAC 176-26-120.
Exhibit B  
Chapter 15.10  
CRITICAL AREAS

Article I. Generally

15.10.010 Purpose.

The purpose of this chapter is to protect the environment, human life, and property from harm and degradation within the shoreline jurisdiction in the city of Federal Way. This is to be achieved by precluding or limiting development in areas where development poses serious or special hazards; by preserving and protecting the quality of surface water; and by preserving important ecological areas such as steep slopes, streams, and wetlands. The public purposes to be achieved by this chapter include protection of water quality, groundwater recharge, shoreline stabilization, stream flow maintenance, stability of slope areas, wildlife and fisheries habitat maintenance, protection of human life and property, and maintenance of natural stormwater storage systems.

15.10.020 Applicable provisions.

(1) The provisions of this chapter apply throughout designated shoreline areas under the Shoreline Master Plan and must be complied with regardless of any other conflicting provisions of Title 14 and 19, FWRC.

(2) Any conflict between the standards outlined in this chapter and Chapter 15.05 shall be resolved in favor of the standard that is most protective of the shoreline ecological functions. In addition to the development standards outlined in this chapter, the following minimum requirements shall apply with regard to activities and development in critical areas located within shoreline jurisdiction:

(a) Minimum setbacks from the top of marine bluffs specified in FWRC 15.05.040(4)(b)(iii) shall be maintained in all cases unless a shoreline variance is granted.

(b) Minimum setbacks from the OHWM established in FWRC 15.05.080, 15.05.090, and 15.05.100 shall be maintained in all cases unless a shoreline variance is granted.

15.10.030 Jurisdiction.

This chapter applies to the subject property if it:

(1) Contains or is within 25 feet of a geologically hazardous area;

(2) Contains or is within 100 feet of a wellhead;

(3) Contains or is within 100 feet of the ordinary high water mark of a major stream;

(4) Contains or is within 50 feet of the ordinary high water mark of a minor stream;

(5) Contains or is within 200 feet of the edge of any regulated wetland, including regulated wetlands associated with any major stream, minor stream, or regulated lake; or

(6) Is located within a critical recharge area or a wellhead protection area (one-, five-, or 10-year wellhead capture zone).

15.10.040 Other authority and jurisdiction.

Nothing in this chapter in any way limits, or may be construed to limit, the authority of the city under any other applicable law, nor in any way decreases the responsibility of
the applicant to comply with all other applicable local, state, and federal laws and regulations.

15.10.050 Liability.
(1) Prior to issuance of any building permit or other permit by the building official, the applicant may be required to enter into an agreement with the city, in a form acceptable to the city attorney, releasing and indemnifying the city from and for any damage or liability resulting from any development activity on the subject property which is related to the physical condition of the steep slope, stream, or regulated wetland. This agreement shall be recorded in the county, at the applicant’s expense, and shall run with the property.
(2) The city may also require the applicant to obtain insurance coverage for damage to city or private property and/or city liability related to any such development activity.

Article II. Administration

15.10.060 Administration.
Except as otherwise established in this chapter, this chapter will be implemented and enforced as part of the city’s review of any development activity on the subject property. If the development activity requires approval through Process I, II, III, or IV the provisions of this chapter will be implemented as part of these processes. If the development activity does not require approval through Process I, II, or III, the provisions of this chapter will be implemented through site plan review under Chapter 19.60 FWRC.

15.10.070 Maps adopted.
The city hereby adopts the June 19, 1999, city of Federal Way final wetland inventory report, to show the locations of certain regulated wetlands in the designated shoreline areas of the Shoreline Master Plan. The city hereby adopts the Lakehaven Utility District wellhead one-, five-, and 10-year capture zone maps, as now existing or amended.

15.10.080 Basis for determination.
The determinations regarding whether the subject property is regulated under this chapter, as well as the extent and nature of the regulations that will apply to the subject property, will be determined based on environmental information and mapping possessed by the city as well as other information and mapping provided by or through the applicant. The city may require the applicant, at the applicant’s expense, to provide any information, mapping, studies, materials, inspections, or reviews that are reasonably necessary to implement this chapter and to require that such information, studies, mapping, materials, inspections, and reviews be provided or performed by a qualified professional acceptable to the city. Other provisions of this chapter detail other information and inspections that may be required in some instances.

15.10.090 Bonds.
The city may require a bond under Chapter 19.25 FWRC to ensure compliance with any aspect of this chapter.
15.10.100 Dedication.

The city may require the applicant to dedicate development rights or an open space easement to the city to ensure protection of steep slopes, wells, streams, and regulated wetlands and other areas within the jurisdiction of this chapter.

15.10.110 Certain activities not subject to critical area standards.

(1) The following activities are not subject to the provisions of this chapter:
   (a) Emergencies that, in the opinion of the shoreline administrator, threaten the public health, safety, and welfare, where impacts to critical areas and their buffers are mitigated to the extent feasible following the emergency actions;
   (b) Normal and routine maintenance and repair of the following facilities, for which a maintenance plan has been approved by the public works director, provided that impacts to critical areas and their buffers are mitigated to the extent feasible:
      (i) Existing drainage ditches provided, however, that this exception shall not apply to any ditches used by salmonids other than to permit free migration of salmonids to their spawning grounds;
      (ii) Surface water facilities, provided that such activities shall not involve conversion of any regulated wetland not currently being used for such activity;
      (iii) Existing public facilities and utility structures or rights-of-way.
   The maintenance plan may be designed to address individual facilities or facility components, area-wide facilities, or city-wide systems. The maintenance plan shall identify the nature of the potential maintenance or repair activities, specifications for work which may occur within potential sensitive areas, specifications for restoring and/or mitigating impacts, specifications for timing of maintenance or repair activities, and process for contacting or notifying the city of pending maintenance or repair activities to ensure compliance with the approved plan. The public works director may require that an appropriate bond or security be maintained with the city to ensure restoration of disturbed areas.
   (2) Any activities not subject to the provisions of this chapter are still subject to the requirements of Chapter 15.05 FWRC.

Article III. General Site Design Requirements

15.10.120 Responsibility of applicant.

The applicant shall locate all improvements on subject property to minimize adverse impacts to geologically hazardous areas, wells, streams, regulated wetlands, and critical aquifer recharge and wellhead protection areas.

15.10.130 Vehicle circulation areas.

The applicant shall locate all parking and vehicle circulation areas as far as possible from any geologically hazardous area, wellhead, stream, and regulated wetland.

15.10.140 Time limitation.

The city may limit development activities which involve any clearing and grading activity to specific months of the year and to a maximum number of continuous days or hours in order to minimize adverse impacts.
Exhibit B

15.10.150 Other requirements.
The city may require other construction techniques, conditions, and restrictions on development in order to minimize adverse impacts on geologically hazardous areas, wells, critical aquifer recharge areas and wellhead protection areas, streams, or regulated wetlands.

Article IV. Geologically Hazardous Areas Development

15.10.160 Limitations.
(1) This section regulates development activities and clearing and grading on or within 25 feet of a geologically hazardous area. Refer to FWRC 15.05.040(b)(iii) for additional requirements related to properties with steep slopes and bluffs.
(2) Development activities, clearing and grading, or the installation and maintenance of landscaping normally associated with residential, commercial, or park use may not occur on or within 25 feet of a geologically hazardous area unless no reasonable alternative exists and then only if the development activity or clearing and grading will not lead to or create any increased slide, seismic, or erosion hazard.
(3) Before approving any development activity or clearing and grading under this section, the city may require the applicant to submit the following information:
   (a) A soils report prepared by a qualified professional engineer licensed in the state which describes how the proposed development will impact each of the following on the subject property and nearby properties:
      (i) Slope stability, landslide hazard, and sloughing.
      (ii) Seismic hazards.
      (iii) Groundwater.
      (iv) Seeps, springs, and other surface waters.
      (v) Existing vegetation.
   (b) Recommended foundation design and optimal location for roadway improvements.
   (c) Recommended methods for mitigating identified impacts and a description of how these mitigating measures may impact adjacent properties.
   (d) Any other information the city determines is reasonably necessary to evaluate the proposal.
(4) If the city approves any development activity or clearing and grading under this section, it may, among other appropriate conditions, impose the following conditions of approval:
   (a) That the recommendations of the soils report be followed.
   (b) That the applicant must pay for the services of a qualified professional engineer selected and retained by the city to review the soils report and other relevant information.
   (c) That a qualified professional engineer be present on site during all clearing and grading activities.
   (d) That trees, shrubs, and groundcover be retained except where necessary for approved development activities on the subject property.
   (e) That additional vegetation be planted in disturbed areas.
Exhibit B

Article V. Streams

15.10.170 Stream setbacks.
(1) No clearing and grading or improvements may take place or be located in a stream or within the following stream setback areas except as allowed within this chapter:
   (a) The stream setback area for a major stream includes all areas within 100 feet outward from the ordinary high water mark of a major stream.
   (b) The stream setback area for a minor stream includes all areas within 50 feet outward from the ordinary high water mark of a minor stream.
(2) The stream setback areas established by this section do not apply to any segment of a stream that is presently within a culvert, unless that stream will be taken out of the culvert as part of development of the subject property.

15.10.180 Relocation.
(1) Relocation of a stream on the subject property is permitted subject to all of the conditions and restrictions of this section.
(2) A proposal to relocate a stream will be reviewed and decided upon using process IV per Chapter 19.70 FWRC.
(3) As part of any request under this section, the applicant must submit a stream relocation plan, prepared by a qualified professional approved by the city that shows the following:
   (a) The creation of a natural meander pattern.
   (b) The formation of gentle side slopes, at least two feet horizontally to one foot vertically, and the installation of erosion control features for stream side slopes.
   (c) The creation of a narrow subchannel, where feasible, against the south or west bank.
   (d) The utilization of natural materials, wherever possible.
   (e) The use of vegetation normally associated with streams, including primarily native riparian vegetation.
   (f) The creation of spawning and nesting areas, wherever appropriate.
   (g) The re-establishment of the fish population, wherever feasible.
   (h) The restoration of water flow characteristics compatible with fish habitat areas, wherever feasible.
   (i) The filling and revegetation of the prior channel.
   (j) A proposed phasing plan specifying time of year for all project phases.
(4) The city will allow a stream to be relocated only if water quality, habitat, and stormwater retention capability of the streams will be significantly improved by the relocation. Convenience to the applicant in order to facilitate general site design may not be considered.
(5) Prior to diverting water into the new channel, a qualified professional approved by the city shall inspect the new channel following its completion and issue a written report to the shoreline administrator stating that the channel complies with the requirements of this section.
(6) The amount of flow and velocity of the stream may not be increased or decreased as the stream enters or leaves the subject property.
15.10.190 Culverts.

(1) Culverts are permitted in streams within the shoreline jurisdiction of the City only if approved under this section.

(2) The city will review and decide upon applications under this chapter using process III per Chapter 19.65 FWRC.

(3) The city will allow a stream to be put in a culvert only if:
   (a) No significant habitat area will be destroyed; and
   (b) No other feasible site design alternative exists, which allows the stream to remain in an open condition. Convenience to the applicant in order to facilitate general site design will not be considered.

(4) The culvert must be designed and installed to allow passage of fish inhabiting or using the stream. The culvert must be large enough to accommodate a 100-year storm.

(5) The applicant shall, at all times, keep all culverts on the subject property free of debris and sediment so as to allow free passage of water and, if applicable, fish. The city shall require a bond under Chapter 19.25 FWRC to ensure maintenance of the culvert approved under this section.

15.10.200 Removal of streams from culverts.

If development of the subject property requires approval through Process I, II, or III of Title 19 FWRC, the city may require the stream to be taken out of the culvert and restored to a natural channel configuration as part of the city’s approval of development of the subject property.

15.10.210 Rehabilitation.

The shoreline administrator may permit or require the applicant to rehabilitate or maintain a stream by requiring the removal of detrimental materials such as debris, sediment, and invasive, non-native vegetation. Approval of stream rehabilitation shall be based on a review of a plan containing, at a minimum, an analysis of existing conditions, identification of the source, if possible, of the degradation of the stream or riparian zone, proposed corrective actions, including installation of native species within the riparian corridor, performance standards, monitoring schedule, planting plans, erosion and sedimentation control plans, and grading plans as necessary. The shoreline administrator shall require an applicant to retain the services of a qualified professional in preparing the restoration plan. These actions may be permitted or required at any time that a condition detrimental to water quality, stability of stream banks, degradation of existing naturally vegetated buffers, or in stream habitat exists. Intrusions into regulated steep slopes and associated setbacks will be allowed for purposes of approved stream rehabilitation projects.

15.10.220 Intrusion into stream setbacks.

(1) Essential public facilities, public utilities, and other public improvements. The shoreline administrator may permit the placement of an essential public facility, public utility, or other public improvements in a setback from a stream if he or she determines that the line or improvement must traverse the setback area because no feasible alternative location exists based on an analysis of technology and system efficiency. The specific location and extent of the intrusion into the setback area must constitute the minimum necessary encroachment to meet the requirements of the public facility or utility. "Public utility and other public improvements" shall not include improvements whose primary purpose is to benefit a private development, including without limitation...
Exhibit B

interior roads or privately owned detention facilities installed within or during the construction of a residential subdivision, binding site plan, or other commercial development.

(2) **Minor improvements.** Minor improvements such as footbridges crossing the stream, walkways, and benches may be located within the setback area if approved through Process III per Chapter 19.65 FWRC, based on the following criteria:

(a) It will not adversely affect water quality;

(b) It will not adversely affect the existing quality of wildlife habitat within the stream or setback area;

(c) It will not adversely affect drainage or stormwater retention capabilities;

(d) It will not lead to unstable earth conditions nor create erosion hazards;

(e) It will not be materially detrimental to any other property nor to the city as a whole; and

(f) It is necessary to correct any one of the adverse conditions specified in subsections (2)(a) through (2)(e) of this subsection.

(3) **Other intrusions.** Other than as specified in subsections (1) and (2) of this section, the city may approve any request to locate an improvement or engage in clearing and grading activities within stream setback areas only through process IV per Chapter 19.70 FWRC, based on the following criteria:

(a) It will not adversely affect water quality;

(b) It will not adversely affect the existing quality of wildlife habitat within the stream or setback area;

(c) It will not adversely affect drainage or stormwater retention capabilities;

(d) It will not lead to unstable earth conditions nor create erosion hazards;

(e) It will not be materially detrimental to any other property in the area of the subject property nor to the city as a whole, including the loss of significant open space; and

(f) It is necessary for reasonable development of the subject property not otherwise prohibited by the Shoreline Master Program.

**15.10.230 Additional requirements for clearing and grading.**

If any clearing and grading is permitted within the stream or stream setback area, the applicant shall comply with the following additional requirements:

(1) All fill material used must be nondissolving and nondecomposing. The fill material must not contain organic or inorganic material that would be detrimental to water quality or the existing habitat.

(2) The applicant may deposit dredge spoils on the subject property only if part of an approved development on the subject property.

(3) The applicant shall stabilize all areas left exposed after clearing and grading with native vegetation normally associated with the stream or setback area.

**Article VI. Regulated Wetlands**

**15.10.240 Determination of wetland and regulated wetland.**

(1) **Generally.** The March 1997 Washington State Wetlands Identification and Delineation Manual (Department of Ecology Publication No. 96-94) as set forth in WAC 173-22-080, as it exists as of November 1, 1999, or as subsequently amended, will be used for identification and delineation of wetlands within the city. Although a site-specific wetland may not meet the criteria described above, it will be considered a...
regulated wetland if it is functionally related to another wetland that meets the criteria. Where vegetation has been removed, a wetland may be determined by the presence of hydric soils, as well as other documentation of the previous existence of wetland vegetation such as aerial photographs.

(2) **Evaluation.** If the city determines that a wetland may exist on or within 200 feet of the subject property, the shoreline administrator shall require the applicant to submit a wetland report, prepared by a qualified professional approved by the city, that includes the information set forth in subsections (2)(a) through (2)(g) and (3) of this section. The shoreline administrator shall use the information required by subsections (2)(a) and (2)(b) to determine if the area is a regulated wetland and, if so, shall use the information required by subsections (2)(c) through (2)(g) and (3) to determine the category and the precise boundaries of that regulated wetland.

(a) An evaluation of whether the area in question is a regulated wetland based upon the definition of wetland and the size thresholds, outlined in FWRC 15.10.250.

(b) An overview of the methodology used to conduct the study.

(c) A description of the wetland and plant communities found therein, a map delineating the edge of the wetland and location of plant communities, and a detailed description of the method used to identify the wetland edge.

(d) The wetland classification, according to the U.S. Fish and Wildlife Service “Classification of Wetlands and Deep Water Habitats in the U.S.”

(e) A list of observed plant and wildlife species, using both scientific and common names, and a description of their relative abundance.

(f) A list of potential plant or animal species based on signs or other observation.

(g) An evaluation and assessment of the existing or potential functions and values of the wetland based on the following factors: surface water control; wildlife habitat; pollution and erosion control; groundwater exchange; open space and recreation; and educational and cultural opportunities.

(3) **Drainage facilities.** Surface water ponds, drainage ditches, and other such facilities which were designed to impound or convey water for an engineered purpose are not considered regulated wetlands under this chapter provided they meet all of the following criteria:

(a) The drainage facility must have been intentionally human created. This is to differentiate from those wetland sites that are accidental consequences of development actions, such as road construction or culvert placement. Such sites may be considered regulated wetlands by the director upon a review, under subsection (2)(g) of this section, of the ecological functions and values of the site.

(b) The drainage facility must have been originally constructed on uplands (nonwetland areas). If the drainage facility is located within a straightened, channelized, or otherwise disturbed natural watercourse, it may be considered a regulated wetland by the director upon a review, under subsection (2)(g) of this section, of the ecological functions and values of the site.

(c) The facility must be actively operated as a surface water drainage facility. Abandoned drainage facilities may be considered regulated wetlands by the director upon a review, under subsection (2)(g) of this section, of the ecological functions and values of the site.

(d) Wetland conditions have not expanded beyond the originally constructed drainage facility boundary. In such a case, the expanded area may be considered a regulated wetland by the director upon review, under subsection (2)(g) of this section, of the ecological functions and values of the site.
(e) The drainage facility was not designed or constructed as a requirement to mitigate previous wetland impacts.
(f) The director finds that limited ecological functions and values do not warrant application of the city’s wetland regulations.

15.10.250 Wetland categories and standard buffers.

(1) Wetlands are classified into the following categories:

(a) Category I wetlands meet one of the following criteria:

(i) Contain the presence of species or documented habitat recognized by state or federal agencies as endangered, threatened, or potentially extirpated plant, fish, or animal species; or

(ii) Contain the presence of plant associations of infrequent occurrence, irreplaceable ecological functions, or exceptional local significance including but not limited to estuarine systems, peat bogs and fens, mature forested wetlands, groundwater exchange areas, significant habitat, or unique educational sites; or

(iii) Have three or more wetland classes, one of which is open water.

(b) Category II wetlands are greater than 2,500 square feet in area, do not exhibit the characteristics of Category I wetlands, and meet one of the following criteria:

(i) Are contiguous with water bodies or tributaries to water bodies which under normal circumstances contain or support a fish population, including streams where flow is intermittent; or

(ii) Are greater than one acre in size in its entirety; or

(iii) Are less than or equal to one acre in size in its entirety and have two or more wetland classes, with neither class dominated by non-native invasive species.

(c) Category III wetlands are greater than 2,500 square feet in area and do not exhibit those characteristics of Category I or II wetlands.

(2) Standard buffer widths for regulated wetlands are established as follows:

(a) Category I wetlands shall have a standard buffer width of 200 feet.

(b) Category II wetlands shall have a standard buffer width of 100 feet.

(c) Category III wetlands shall have a standard buffer width of 50 feet for wetlands that are greater than 10,000 square feet in area, and shall have a standard buffer width of 25 feet for wetlands that are between 2,500 to 10,000 square feet in area.

15.10.260 Structures, improvements, and clearing and grading within regulated wetlands.

(1) Generally. No clearing and grading may take place and no structure or improvement may be located in a regulated wetland except as provided in this section.

(2) Public park. The city may allow pedestrian access through a regulated wetland in conjunction with a public park. The access, if approved, must be designed to the maximum extent feasible to protect the wetland from any adverse effects or impacts of the access and to limit the access to the defined access area.

(3) Rehabilitation. The shoreline administrator may permit or require an applicant to rehabilitate and maintain a regulated wetland by removing detrimental material such as debris and inappropriate vegetation and by requiring that native vegetation be planted. These actions may be required at any time that a condition detrimental to water quality or habitat exists.

(4) Modification. Other than as specified in subsections (2) and (3) of this section, the city may approve any request to locate an improvement or engage in clearing and...
Exhibit B

grading within a regulated wetland using Process IV per Chapter 19.70 FWRC. The specific location and extent of the intrusion into the regulated wetland must constitute the minimum necessary encroachment. Approval of a request for improvements or clearing and grading within a regulated wetland through Process IV of FWRC Chapter 19 shall be based on the following criteria:

(a) It will not adversely affect water quality.
(b) It will not adversely affect the existing quality of the wetland’s or buffer’s wildlife habitat.
(c) It will not adversely affect drainage or stormwater retention capabilities.
(d) It will not lead to unstable earth conditions nor create erosion hazards.
(e) It will not be materially detrimental to any other property in the area of the subject property nor to the city as a whole, including the loss of open space.
(f) It will result in no net loss of wetland area, function, or value.
(g) The project is in the best interest of the public health, safety, or welfare.
(h) The applicant has demonstrated sufficient scientific expertise and supervisory capability to carry out the project.
(i) The applicant is committed to monitoring the project and to making corrections if the project fails to meet projected goals.

(5) Required information. As part of any request under this section, the applicant shall submit a report, prepared by a qualified professional approved by the city that includes the following information:

(a) Mitigation plan. A mitigation plan shall include the following elements:
   (i) Environmental goals and objectives.
   (ii) Performance standards.
   (iii) Detailed construction plans.
   (iv) Timing.
   (v) Monitoring program for a minimum of five years.
   (vi) Contingency plan.
   (vii) Subject to the applicant’s election of timing alternatives provided in subsection (5)(d) of this section, a performance and maintenance bond in an amount of 120 percent of the costs of implementing the mitigation plan or the contingency plan, whichever is greater.

(b) Mitigation. Mitigation of wetland impacts shall be restricted to restoration, creation, or enhancement, within the same basin, of in-kind wetland type which results in no net loss of wetland area, function or value. Where feasible, mitigation measures shall be designed to improve the functions and values of the impacted wetland.

(c) Minimum acreage mitigation ratio. The following are ratios for providing restoration, creation, or enhancement of impacted wetland areas. The first number of the ratio specifies the acreage of wetland requiring restoration, creation, or replacement and the second specifies the acreage of wetlands impacted.

<table>
<thead>
<tr>
<th>Wetland Category</th>
<th>Creation and Restoration</th>
<th>Enhancement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Category I (all types)</td>
<td>6:1</td>
<td>12:1</td>
</tr>
</tbody>
</table>
The director may permit or require the above replacement ratios to be increased or decreased based on the following criteria:

(i) Probable success of the proposed mitigation.

(ii) Projected losses in function or value.

(iii) Findings of special studies coordinated with agencies with expertise which demonstrate that no net loss of wetland function or value is attained under an alternative ratio.

(iv) In no case shall the minimum acreage replacement ratio be less than 1.25:1.

(d) **Timing.** All required wetland mitigation improvements, including monitoring, shall be completed and accepted by the shoreline administrator prior to beginning activities that will disturb regulated wetlands, or the applicant shall provide the performance and maintenance bond specified in subsection (5)(a)(vii) of this section. In either event, the applicant may not take any action that disturbs a regulated wetland or its buffer until the director has reviewed and approved the mitigation plan. All wetland- or buffer-disturbing activities, and all mitigation, shall be timed to reduce impacts to existing plants and animals.

(e) **Inspections.** The applicant shall pay for services of a qualified professional selected and retained by the city to review the wetland mitigation report and other relevant information, conduct periodic inspections, issue a written report to the shoreline administrator stating that the project complies with requirements of the mitigation plan, and to conduct and report to the director on the status of the monitoring program.

15.10.270 Structures, improvements, and clearing and grading within regulated wetland buffers.

(1) **Generally.** Except as allowed in this section, no clearing and grading may take place and no structure or improvement may be located within a regulated wetland buffer.

(2) **Wetland buffer averaging.** Wetland buffers may be averaged only when the wetland or the buffer which is proposed to be reduced contains habitat types which have been so permanently impacted that reduced buffers do not pose a detriment to the existing or expected habitat functions. Through Process III per Chapter 19.65 FWRC, the applicant must demonstrate to the satisfaction of the shoreline administrator that the proposed buffer averaging will meet all of the following criteria:

(a) Reduced buffers will not affect the water quality entering a wetland or stream;

(b) Reduced buffers will not adversely affect the existing quality of wildlife habitat within the wetland or the buffer;
(c) Reduced buffers will not result in unstable earth conditions nor create erosion hazards; and
(d) Reduced buffers will not be detrimental to any other public or private properties, including the loss of open space.

At no point shall the buffer width be reduced to less than 50 percent of the required standard buffer width, unless the buffer, in existing conditions, has already been permanently eliminated by previous, legally permitted actions. The total area contained within the buffer after averaging shall be equal to the area required for standard buffer dimensions.

(3) Essential public facilities, public utilities, and other public improvements. The shoreline administrator may permit the placement of an essential public facility, public utility, or other public improvements in a regulated wetland buffer if he or she determines that the line or improvement must traverse the buffer because no feasible or alternative location exists based on an analysis of technology and system efficiency. The specific location and extent of the intrusion into the buffer must constitute the minimum necessary encroachment to meet the requirements of the public facility or utility.

(4) Minor improvements. Minor improvements such as footbridges, walkways, and benches may be located within the buffer from a regulated wetland if approved through Process III per Chapter 19.65 FWRC, based on the following criteria:
(a) It will not adversely affect water quality;
(b) It will not adversely affect the existing quality of the wetland’s or buffer’s wildlife habitat;
(c) It will not adversely affect drainage or stormwater retention capabilities;
(d) It will not lead to unstable earth conditions nor create erosion hazards; and
(e) It will not be materially detrimental to any other property in the area of the subject property nor to the city as a whole.

(5) Wetland buffer reduction. Through Process III per Chapter 19.65 FWRC, the shoreline administrator may reduce the standard wetland buffer width by up to 50 percent, but in no case to less than 25 feet, on a case-by-case basis, if the project includes a buffer enhancement plan which utilizes appropriate native vegetation and clearly substantiates that an enhanced buffer will improve and provide additional protection of wetland functions and values, and where one of the following conditions can be demonstrated:
(a) Existing conditions are such that the required standard buffer exists in a permanently altered state (e.g., roadways, paved parking lots, permanent structures, etc.) which does not provide any buffer function, then the buffer can be reduced for that portion where the intrusions are existing.
(b) Except for Category I wetlands, existing conditions are such that the wetland has been permanently impacted by adjacent development activities, as evidenced by such things as persistent human alterations or the dominance of non-native invasive species.

The director shall have the authority to determine if buffer averaging is warranted on the subject property and, if so, may require additional buffer area on other portions of the perimeter of the sensitive area.

(6) Modification. Other than as specified in subsections (2) and (3) of this section, the city may approve any request to locate an improvement or engage in clearing and grading within the buffer from a regulated wetland through Process IV per Chapter 19.70 FWRC, based on the following criteria:
Exhibit B

(a) It will not adversely affect water quality;
(b) It will not adversely affect the existing quality of the wetland’s or buffer’s wildlife habitat;
(c) It will not adversely affect drainage or stormwater retention capabilities;
(d) It will not lead to unstable earth conditions nor create erosion hazards; and
(e) It will not be materially detrimental to any other property in the area of the subject property nor to the city as a whole, including the loss of open space.

Any modification under this subsection shall not reduce the standard buffer by more than 50 percent, and in no case shall the remaining buffer be less than 25 feet. The city may require, as a condition to any modification granted under this subsection, preparation and implementation of a wetland buffer enhancement plan to protect wetland and buffer functions and values.

(7) Revegetation. The applicant shall stabilize all areas left exposed after clearing and grading with native vegetation normally associated with the buffer.

(8) Wetland buffer increases. The director shall require increased environmentally sensitive area buffer widths on a case-by-case basis when the director determines that a larger buffer is necessary to protect environmentally sensitive area functions, values, or hazards based on site-specific conditions. This determination shall be supported by appropriate documentation showing that additional buffer width is reasonably related to protection of environmentally sensitive area functions and values, or protection of public health, safety, and welfare. Such determination shall be attached as permit conditions. The determination shall demonstrate that at least one of the following factors is met:

(a) There is habitat for species listed as threatened or endangered by state or federal agencies present within the sensitive area and/or its buffer, and additional buffer is necessary to maintain viable functional habitat;

(b) There are conditions or features adjacent to the buffer, such as steep slopes or erosion hazard areas, which over time may pose an additional threat to the viability of the buffer and/or the sensitive area. In such circumstances, the city may choose to impose those buffers, if any, associated with the condition or feature posing the threat in addition to, or to a maximum, beyond the buffer required for the subject sensitive area.

Article VII. Critical Aquifer Recharge Areas and Wellhead Protection Areas

15.10 280 Limitations.

This division regulates any development activity, or division of land which requires review under Title 14 FWRC, Environmental Policy, and which is located within designated wellhead capture zones. Wellhead Capture Zones 1, 2, and 3 are designated as critical aquifer recharge areas under the provisions of the Growth Management Act (Chapter 36.70A RCW) and are established based on proximity to and travel time of groundwater to the city’s public water source wells. This division shall not apply to projects that have received a letter of completeness prior to the effective date of the amendments.

15.10.290 Classification of wellhead capture zones.

The Lakehaven Utility District (LUD) has designated three wellhead capture zones based on proximity to and travel time of groundwater to the city’s public water source wells.
Exhibit B

(1) Wellhead Capture Zone 1 represents the land area overlaying the one-year time-of-travel zone of any public water source well owned by LUD.

(2) Wellhead Capture Zone 2 represents the land area overlaying the five-year time-of-travel zone of any public water source well owned by LUD, excluding the land area contained in Wellhead Capture Zone 1.

(3) Wellhead Capture Zone 3 represents the land area overlaying the 10-year time-of-travel zone of any public water source well owned by LUD, excluding the land area contained in Wellhead Capture Zones 1 or 2.

15.10.300 General requirements.

(1) Activities may only be permitted in a critical aquifer recharge area and wellhead protection area if the applicant can show that the proposed activity will not cause contaminants to enter the aquifer.

(2) The city shall impose development conditions to prevent degradation of the critical aquifer recharge and wellhead protection areas. All conditions to permits shall be based on known, available, and reasonable methods of prevention, control, and treatment (AKART).

(3) The proposed activity must comply with the water source protection requirements and recommendations of the Federal Environmental Protection Agency, State Department of Ecology, State Department of Health, and the King County health department.

(4) The proposed activity must be designed and constructed in accordance with the King County Surface Water Design Manual (KCSWDM), the Federal Way Addendum to the KCSWDM, and the King County Stormwater Pollution Control Manual (BMP manual).

15.10.310 Prohibited activities in Wellhead Capture Zone 1.

(1) Land uses or activities for development that pose a significant hazard to the city’s groundwater resources resulting from storing, handling, treating, using, producing, recycling, or disposing of hazardous materials or other deleterious substances shall be prohibited in Wellhead Capture Zone 1, except as specified in FWRC 19.30.170. These land uses and activities include, but are not limited to:

(a) On-site community sewage disposal systems as defined in Chapter 248-272 WAC;

(b) Hazardous liquid pipelines as defined in Chapter 81.88 RCW;

(c) Solid waste landfills;

(d) Solid waste transfer stations;

(e) Liquid petroleum refining, reprocessing, and storage;

(f) The storage or distribution of gasoline treated with the additive MTBE;

(g) Hazardous waste treatment, storage, and disposal facilities (except those defined under permit by rule for industrial wastewater treatment processes per WAC 173-303-802(5)(c));

(h) Chemical manufacturing, including but not limited to organic and inorganic chemicals, plastics and resins, pharmaceuticals, cleaning compounds, paints and lacquers, and agricultural chemicals;

(i) Dry cleaning establishments using the solvent perchloroethylene;

(j) Primary and secondary metal industries that manufacture, produce, smelt, or refine ferrous and nonferrous metals from molten materials;
Exhibit B

(k) Wood treatment facilities, including wood preserving and wood products preserving;
(l) Mobile fleet fueling operations;
(m) Mining (metal, sand, and gravel); and
(n) Other land uses and activities that the city determines would pose a significant groundwater hazard to the city's groundwater supply.

(2) The uses listed in subsection 1 of this section represent the state of present knowledge and most common description of said uses. As other polluting uses are discovered, or other terms of description become necessary, they will be added to the list of uses prohibited within this zone.

15.10.320 Regulation of facilities handling and storing hazardous materials.

(1) Any development activity or division of land which requires review under Title 14 FWRC, Environmental Policy, located in critical aquifer recharge areas (Wellhead Capture Zones 1, 2, and 3) shall submit a hazardous materials inventory statement with a development permit application. Ongoing operation and maintenance activities of public wells by public water providers are exempt from these requirements.

(2) The development review committee will review the hazardous materials inventory statement along with the land use application, to determine whether hazardous materials meeting the definition of Chapter 19.05 FWRC will be used, stored, transported, or disposed of in connection with the proposed activity. The development review committee shall make the following determination:

(a) No hazardous materials are involved.
(b) Hazardous materials are involved; however, existing laws or regulations adequately mitigate any potential impact, and documentation is provided to demonstrate compliance.
(c) Hazardous materials are involved and the proposal has the potential to significantly impact critical aquifer recharge areas and wellhead capture zones; however, sufficient information is not available to evaluate the potential impact of contamination. The city may require a hydrogeologic critical area assessment report to be prepared by a qualified groundwater scientist in order to determine the potential impacts of contamination on the aquifer. The report shall include the following site- and proposal-related information, at a minimum:
   (i) Information regarding geologic and hydrogeologic characteristics of the site, including the surface location of the wellhead capture zone in which it is located and the type of infiltration of the site.
   (ii) Groundwater depth, flow direction, and gradient.
   (iii) Location of other critical areas, including surface waters, within 200 feet of the site.
   (iv) Best management practices (BMPs) and integrated pest management (IPM) proposed to be used, including:
      (A) Predictive evaluation of groundwater withdrawal effects on nearby wells and surface water features;
      (B) Predictive evaluation of contaminant transport based on potential releases to groundwater; and
      (C) Predictive evaluation of changes in the infiltration/recharge rate.

(3) A spill containment and response plan may be required to identify equipment and/or structures that could fail, and shall include provisions for inspection as required by the applicable state regulations.
Exhibit B

(4) A groundwater monitoring plan may be required to monitor quality and quantity of groundwater, surface water runoff, and/or site soils. The city may require the owner of a facility to install one or more groundwater monitoring wells to accommodate the required groundwater monitoring. Criteria used to determine the need for site monitoring shall include, but not be limited to, the proximity of the facility to production or monitoring wells, the type and quantity of hazardous materials on site, and whether or not the hazardous materials are stored in underground vessels.

(5) The city may employ an outside consultant at the applicant’s expense for third-party review of the hydrogeologic critical area assessment report, the spill containment and response plan, and the groundwater monitoring plan.

15.10.330 Performance standards.

(1) Any new or existing use applying for a development permit, or subdivision approval which requires review under Title 14 FWRC, Environmental Policy, within Wellhead Capture Zone 1, which involves storing, handling, treating, using, producing, recycling, or disposing of hazardous materials or other deleterious substances meeting the definition of Chapter 19.05 FWRC shall comply with the following standards:

(a) Secondary containment.

(i) The owner or operator of any facility or activity shall provide secondary containment for hazardous materials or other deleterious substances in quantities specified in the International Fire Code.

(ii) Hazardous materials stored in tanks that are subject to regulation by the Washington State Department of Ecology under Chapter 173-360 WAC (Underground Storage Tank Regulations) are exempt from the secondary containment requirements of this section; provided, that documentation is provided to demonstrate compliance with those regulations.

(b) Design and construction of new stormwater infiltration systems must address site-specific risks of releases posed by all hazardous materials on site. These risks may be mitigated by physical design means, or equivalent best management practices, in accordance with an approved hazardous materials management plan. Design and construction of said stormwater infiltration systems shall also be in accordance with the KCSWDM, as amended by the city of Federal Way, and shall be certified for compliance with the requirements of this section by a professional engineer or engineering geologist registered in the state of Washington.

(c) The following standards shall apply to construction activities occurring where construction vehicles will be refueled on site, and/or hazardous materials meeting the definition of Chapter 19.05 FWRC will be stored, dispensed, used, or handled on the construction site. As part of the city’s project permitting process, the city may require any or all of the following items:

(i) Detailed monitoring and construction standards;

(ii) Designation of a person on site during operating hours who is responsible for supervising the use, storage, and handling of hazardous materials, and who has appropriate knowledge and training to take mitigating actions necessary in the event of a fire or spill;

(iii) Hazardous material storage, dispensing, refueling areas, and use and handling areas shall be provided with secondary containment adequate to contain the maximum release from the largest volume container of hazardous materials stored at the construction site;
Exhibit B

(iv) Practices and procedures to ensure that hazardous materials left on site when the site is unsupervised are inaccessible to the public. Locked storage sheds, locked fencing, locked fuel tanks on construction vehicles, or other techniques may be used to preclude access;

(v) Practices and procedures to ensure that construction vehicles and stationary equipment that are found to be leaking fuel, hydraulic fluid, and/or other hazardous materials will be removed immediately, or repaired on-site immediately. The vehicle or equipment may be repaired in place, provided the leakage is completely contained;

(vi) Practices and procedures to ensure that storage and dispensing of flammable and combustible liquids from tanks, containers, and tank trucks into the fuel and fluid reservoirs of construction vehicles or stationary equipment on the construction site are in accordance with the International Fire Code; and

(vii) Practices and procedures, and/or on-site materials adequate to ensure the immediate containment and cleanup of any release of hazardous substances stored at the construction site. On-site cleanup materials may suffice for smaller spills, whereas cleanup of larger spills may require a subcontract with a qualified cleanup contractor. Releases shall immediately be contained, cleaned up, and reported according to state requirements.

(2) Any development activity, or division of land which requires review under Title 14 FWRC, Environmental Policy, within all wellhead capture zones (1, 2, and 3), which involve storing, handling, treating, using, producing, recycling, or disposing of hazardous materials, or other deleterious substances, meeting the definition of Chapter 19.05 FWRC shall comply with the following standards:

(a) Fleet and automotive service station fueling, equipment maintenance, and vehicle washing areas shall have a containment system for collecting and treating all runoff from such areas and preventing release of fuels, oils, lubricants, and other automotive fluids into the soil, surface water, or groundwater. Appropriate emergency response equipment shall be kept on site during the transfer, handling, treatment, use, production, recycling, or disposal of hazardous materials or other deleterious substances.

(b) Secondary containment or equivalent best management practices, as approved by the director of community development services, shall be required at loading and unloading areas that store, handle, treat, use, produce, recycle, or dispose of hazardous materials, or other deleterious substances, meeting the definition of Chapter 19.05 FWRC.

(c) Fill material shall not contain concentration of contaminants that exceed cleanup standards for soil as specified in the Model Toxics Control Act (MTCA). An imported fill source statement is required for all projects where more than 100 cubic yards of fill will be imported to a site. The city may require analytical results to demonstrate that fill materials do not exceed cleanup standards. The imported fill source statement shall include:
   i. Source location of imported fill;
   ii. Previous land uses of the source location; and
   iii. Whether or not fill to be imported is native soil.

(d) All development or redevelopment shall implement best management practices (BMPs) for water quality and quantity, as approved by the director of community development services. Such practices include biofiltration swales and use of
Exhibit B

oil-water separators, BMPs appropriate to the particular use proposed, cluster development, and limited impervious surfaces.

15.10.340 Use of pesticides, herbicides, and fertilizers in critical aquifer recharge areas and wellhead protection areas.

Proposed developments with maintained landscaped areas greater than 10,000 square feet in area which require review under Title 14 FWRC, Environmental Policy, shall prepare an operations and management manual using best management practices (BMPs) and integrated pest management (IPM) for fertilizer and pesticide/herbicide applications. The BMPs shall include recommendations on the quantity, timing, and type of fertilizers applied to lawns and gardens to protect groundwater quality.
Exhibit B
Chapter 15.15
FLOOD DAMAGE PREVENTION

Article I. Generally

15.15.010 Purpose.

It is the purpose of this chapter to promote the public health, safety, and general welfare and minimize public and private losses due to flood conditions in specific areas by provisions designed:

(1) To protect human life and health;
(2) To minimize expenditure of public money and costly flood control projects;
(3) To minimize the need for rescue and relief efforts associated with flooding and generally undertaken at the expense of the general public;
(4) To minimize prolonged business interruptions;
(5) To minimize damage to public facilities and utilities such as water and gas mains; electric, telephone, and sewer lines; streets; and bridges located in areas of special flood hazard;
(6) To help maintain a stable tax base by providing for the sound use and development of areas of special flood hazard so as to minimize future flood blight areas;
(7) To ensure that potential buyers are notified that property is in an area of special flood hazard;
(8) To ensure that those who occupy the areas of special flood hazard assume responsibility for their actions.

15.15.020 Adoption of state and federal statutes and regulations.

The following state statutes and administrative regulations, as currently existing and hereafter amended, are hereby adopted by this reference as if set forth in full:

(1) Chapter 86.16 RCW, Floodplain Management.
(2) 44 CFR 59.22(a)
(3) 44 CFR 60.3(c)(1)(d)(2)
(4) 44 CFR 60.3(b)(1)
(5) 44 CFR 59.22(b)(1)
(6) 44 CFR 60.3(a)(2)

15.15.030 Methods of reducing flood losses.

In order to accomplish its purposes, this chapter includes methods and provisions for:

(1) Restricting or prohibiting uses which are dangerous to health, safety, and property due to water or erosion hazards, or which result in damaging increases in erosion or in flood heights or velocities;
(2) Requiring that uses vulnerable to floods, including facilities which serve such uses, be protected against flood damage at the time of initial construction;
(3) Controlling the alteration of natural flood plains, stream channels, and natural protective barriers, which help accommodate or channel flood waters;
(4) Controlling filling, grading, dredging, and other development which may increase flood damage; and
(5) Preventing or regulating the construction of flood barriers that unnaturally divert floodwaters or may increase flood hazards in other areas.
Exhibit B

15.15.040 Definitions.

The following words, terms and phrases, when used in this chapter, shall have the meanings ascribed to them in this chapter, except where the context clearly indicates a different meaning. Unless specifically defined below, terms or phrases used in this chapter shall be interpreted so as to give them the meaning they have in common usage and to give this chapter its most reasonable application.

Appeal means a request for a review of the interpretation of any provision of this chapter or a request for a flood variance.

Area of shallow flooding means designated as AO or AH zone on the flood insurance rate map (FIRM). AO zones have base flood depths that range from one to three feet above the natural ground; a clearly defined channel does not exist; the path of flooding is unpredictable and indeterminate; and velocity flow may be evident. AO is characterized as sheet flow; AH indicates ponding, and is shown with standard base flood elevations.

Area of special flood hazard means the land in the flood plain within a community subject to a one percent or greater chance of flooding in any given year. Designation on maps always includes the letters A or V.

Base flood means the flood having a one percent chance of being equaled or exceeded in any given year (also referred to as the “100-year flood”). Designated on flood insurance rate maps by the letters A or V.

Basement means any area of the building having its floor sub-grade (below ground level) on all sides.

Breakaway wall means a wall that is not part of the structural support of the building and is intended through its design and construction to collapse under specific lateral loading forces, without causing damage to the elevated portion of the building or supporting foundation system.

Coastal high hazard area means an area of special flood hazard extending from offshore to the inland limit of a primary frontal dune along an open coast and any other area subject to high velocity wave action from storms or seismic sources. The area is designated on the FIRM as zone V1-30, VE, or V.

Critical facility means a facility for which even a slight chance of flooding might be too great. Critical facilities include (but are not limited to) schools, nursing homes, hospitals, police, fire and emergency response installations, and installations which produce, use, or store hazardous materials or hazardous waste.

Development means any manmade change to improved or unimproved real estate, including but not limited to buildings or other structures, mining, dredging, filling, grading, paving, excavation or drilling operations or storage of equipment or materials located within the area of special flood hazard.

Director means the director of the city of Federal Way community development department or his or her designee.

Elevated building means, for insurance purposes, a nonbasement building that has its lowest elevated floor raised above ground level by foundation walls, shear walls, post, piers, pilings, or columns.

Elevation certificate means the official form (FEMA Form 81-31) used to track development, provide elevation information necessary to ensure compliance with community floodplain management ordinances, and determine the proper insurance premium rate with Section B completed by Federal Way.

Existing manufactured home park or subdivision means a manufactured home park or subdivision for which the construction of facilities for servicing the lots on which the
Exhibit B

manufactured homes are to be affixed (including, at a minimum, the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads) is completed before the effective date of the adopted floodplain management regulations.

Expansion to an existing manufactured home park or subdivision means the preparation of additional sites by the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads).

Flood or flooding means a general and temporary condition of partial or complete inundation of normally dry land areas from:

1. The overflow of inland or tidal waters; and/or
2. The unusual and rapid accumulation of runoff of surface waters from any source.

Flood insurance rate map (FIRM) means the official map on which the Federal Insurance Administration has delineated both the areas of special flood hazards and the risk premium zones applicable to the community.

Flood insurance study (FIS) means the official report provided by the Federal Insurance Administration that includes flood profiles, the flood boundary-floodway map, and the water surface elevation of the base flood.

Flood variance means a grant of relief from the requirements of this chapter that permits construction in a manner that would otherwise be prohibited by this chapter.

Floodway means the channel of a river or other watercourse and the adjacent land areas that must be reserved in order to discharge the base flood without cumulatively increasing the water surface elevation more than one foot.

Lowest floor means the lowest floor of the lowest enclosed area (including basement). An unfinished or flood resistant enclosure, usable solely for parking of vehicles, building access, or storage in an area other than a basement area, is not considered a building’s lowest floor; provided, that such enclosure is not built so as to render the structure in violation of the applicable non-elevation design requirements of this chapter found at FWRC 15.15.140, provided there are adequate flood ventilation openings.

Manufactured home means a structure, transportable in one or more sections, which is built on a permanent chassis and is designed for use with or without a permanent foundation when attached to the required utilities. The term “manufactured home” does not include a “recreational vehicle.”

Manufactured home park or subdivision means a parcel (or contiguous parcels) of land divided into two or more manufactured home lots for rent or sale.

New construction means structures for which the “start of construction” commenced on or after the effective date of the ordinance codified in this chapter.

New manufactured home park or subdivision means a manufactured home park or subdivision for which the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including at a minimum the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads) is completed on or after the effective date of adopted floodplain management regulations.

Recreational vehicle means a vehicle:

1. Built on a single chassis;
2. Four hundred square feet or less when measured at the largest horizontal projection;
3. Designed to be self-propelled or permanently towable by a light duty truck; and
Exhibit B

(4) Designed primarily not for use as a permanent dwelling but as temporary living quarters for recreational, camping, travel, or seasonal use.

*Start of construction* includes substantial improvement, and means the date the building permit was issued, provided the actual start of construction, repair, reconstruction, placement, or other improvement was within 180 days of the permit date. The “actual start” means either the first placement of permanent construction of a structure on a site, such as the pouring of slab or footings, the installation of piles, the construction of columns, or any work beyond the stage of excavation; or the placement of a manufactured home on a foundation. Permanent construction does not include land preparation, such as clearing, grading, and filling; nor does it include the installation of streets and/or walkways; nor does it include excavation for a basement, footings, piers, or foundations or the erection of temporary forms; nor does it include the installation on the property of accessory buildings, such as garages or sheds not occupied as dwelling units or not part of the main structure. For a substantial improvement, the “actual start” of construction means the first alteration of any wall, ceiling, floor, or other structural part of a building, whether or not that alteration affects the external dimensions of the building.

*Structure* means a walled and roofed building, including a gas or liquid storage tank that is principally above ground.

*Substantial damage* means damage of any origin sustained by a structure whereby the cost of restoring the structure to its before-damaged condition would equal or exceed 50 percent of the market value of the structure before the damage occurred.

*Substantial improvement* means any repair, reconstruction, or improvement of a structure, the cost of which equals or exceeds 50 percent of the market value of the structure either:

1. Before the improvement or repair is started; or
2. If the structure has been damaged and is being restored, before the damage occurred. For the purposes of this definition, “substantial improvement” is considered to occur when the first alteration of any wall, ceiling, floor, or other structural part of the building commences, whether or not that alteration affects the external dimensions of the structure.

The term can exclude:

3. Any project for improvement of a structure to correct pre-cited existing violations of state or local health, sanitary, or safety code specifications which have been previously identified by the local code enforcement official and which are the minimum necessary to assure safe living conditions; or
4. Any alteration of a structure listed on the National Register of Historic Places or a State Inventory of Historic Places.

*Water dependent* means a structure for commerce or industry that cannot exist in any other location and is dependent on the water by reason of the intrinsic nature of its operations.

**Article II. Provisions**

15.15.050 General provisions.

1. *Application of chapter.* This chapter shall apply to all areas of special flood hazards within the jurisdiction of Federal Way. The areas of special flood hazard identified by the Federal Insurance Administration in a scientific and engineering report entitled “The Flood Insurance Study for Federal Way” dated May 16, 1995, and any
