2004 Water Quality Assessment (Final) - Category 1 Listings

WRIA	Listing ID	Category	98 List?	Waterbody Name	Location Information					Parameter	Medium
				Basis						Remarks	
1	**9081**	**1**	**N**	**ANDERSON CREEK**	**MU69PG**	**1.252**	**39N**	**04E**	**19**	**Ammonia-N**	**Water**
				Joy (2000) station 01TAND (ANDERSON CREEK) shows 0 excursions beyond the criterion out of 7 samples collected between 02/97 - 02/98.							
1	**38945**	**1**	**N**	**ANDERSON CREEK**	**ZW36TL**	**0.419**	**37N**	**04E**	**26**	**Ammonia-N**	**Water**
				Western Washington University unpublished data from station COB-CW5 (submitted by Sue Blake of Whatcom County on 17 December 2002)							
1	**38946**	**1**	**N**	**ANDERSON CREEK**	**ZW36TL**	**0.419**	**37N**	**04E**	**26**	**Dissolved oxygen**	**Water**
				Western Washington University unpublished data from station COB-CW5 (submitted by Sue Blake of Whatcom County on 17 December 2002) show no excursions beyond the criterion from measurements collected 1995-1999.							
1	**39036**	**1**	**N**	**ANDERSON CREEK**	**ZW36TL**	**0.419**	**37N**	**04E**	**26**	**Fecal Coliform**	**Water**
				City of Bellingham unpublished data from station COB-CW5 (submitted by Sue Blake of Whatcom County on 17 December 2002) shows a geometric mean of 35 cfu/100mL from 2 samples collected in 2000. City of Bellingham unpublished data from station COB-CW5 (submitted by Sue Blake of Whatcom County on 17 December 2002) shows a geometric mean of 17 cfu/100mL from 2 samples collected in 1995. City of Bellingham unpublished data from station COB-CW5 (submitted by Sue Blake of Whatcom County on 17 December 2002) shows a geometric mean of 16 cfu/100mL from 1 samples collected in 1996. City of Bellingham unpublished data from station COB-CW5 (submitted by Sue Blake of Whatcom County on 17 December 2002) shows a geometric mean of 12 cfu/100mL from 2 samples collected in 1999. City of Bellingham unpublished data from station COB-CW5 (submitted by Sue Blake of Whatcom County on 17 December 2002) shows a geometric mean of 12 cfu/100mL from 2 samples collected in 1998. City of Bellingham unpublished data from station COB-CW5 (submitted by Sue Blake of Whatcom County on 17 December 2002) shows a geometric mean of 7 cfu/100mL from 2 samples collected in 1997. City of Bellingham unpublished data from station COB-CW5 (submitted by Sue Blake of Whatcom County on 17 December 2002) shows a geometric mean of 5 cfu/100mL from 1 samples collected in 2001.						Nooksack River Fecal Coliform TMDL approved 08-Aug-00.	
1	**41779**	**1**	**N**	**ANDERSON CREEK**	**ZW36TL**	**0.419**	**37N**	**04E**	**26**	**Mercury**	**Water**
				Norton, D., (2004), station LW_AND01 shows that one sample collected in year 2002 exceeded the chronic criterion.							
1	**9083**	**1**	**N**	**ANDERSON CREEK**	**MU69PG**	**1.252**	**39N**	**04E**	**19**	**pH**	**Water**
				Joy (2000) station 01TAND (ANDERSON CREEK) shows 0 excursions beyond the criterion out of 13 samples collected between 02/97 - 02/98. Nooksack Indian Tribe unpublished data from station Nooksack-26 (submitted by Sue Blake of Whatcom County on 17 December 2002) show no excursions beyond the criterion from measurements collected in 1996-1997.							
1	**39258**	**1**	**N**	**ANDERSON CREEK**	**ZW36TL**	**0.419**	**37N**	**04E**	**26**	**pH**	**Water**
				Western Washington University unpublished data from station COB-CW5 (submitted by Sue Blake of Whatcom County on 17 December 2002) show no excursions beyond the criterion from measurements collected in 1995-1999.

				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station Station BLL011 (BELLINGHAM BAY - OFF NOOKSACK) shows a geometric mean of 8 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 3 samples collected during 1996. Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station Station BLL011 (BELLINGHAM BAY - OFF NOOKSACK) shows a geometric mean of 3 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 8 samples collected during 1997.Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station Station BLL011 (BELLINGHAM BAY - OFF NOOKSACK) shows a geometric mean of 7 does not exceed the criterion and that 10% of the samples does not exceed the percentile criterion from 10 samples collected during 2000.					This listing was on the 1998 303(d) list based on two excursions in 1985 & 1987. More recent data from Ecology ambient monitoirng from 1996 - 2000 shows that fecal coliform standards are being met.

				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station BLL011 (BELLINGHAM BAY - OFF NOOKSACK) shows 0 excursions beyond the criterions out of 16 samples collected between 1993-2000					This listing was on the 1998 303(d) list based on four excursions in 1986 & 1987. More recent data from Ecology ambient monitoirng from 1993 - 2000 shows that pH standards are being met. Note that location was incorrect in 1998.	
1	**10093**	**1**	**N**	**BELLINGHAM BAY (INNER) AND WHATCOM WATERWAY**	**390KRD**	**48122H5D8**	**48.735**	**122.585**	**Temperature**	**Water**
				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station BLL011 (BELLINGHAM BAY - OFF NOOKSACK) shows 4 excursions beyond the criterions out of 21 samples collected between 1993-2000					This listing was reviewed by Department of Ecology Coastal and Estuarine Assessment Unit staff [see Grantham memo 4/2005, attachment (d)], who concluded that these exceedances are a natural condition and there are insufficient human influences in this area to produce significant temperature increases.	
1	**10146**	**1**	**N**	**BELLINGHAM BAY (OUTER)**	**390KRD**	**48122G6J1**	**48.695**	**122.615**	**Ammonia-N**	**Water**
				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station BLL009 (Bellingham Bay - Pt. Frances) shows 0 excursions beyond the criterions out of 52 samples collected between 1993-2000					An undetermined portion of this area/waterbody occurs or is likely to occur on the Lummi Indian Reservation. State of Washington does not have jurisdiction over Reservation waters.

				City of Bellingham unpublished data at station COB-PORTER (submitted by Sue Blake of Whatcom County on 17 December 2002) shows a 7-day mean of daily maximum values of 12.7 degrees C from continuous measurements collected in 2000. City of Bellingham unpublished data at station COB-PORTER (submitted by Sue Blake of Whatcom County on 17 December 2002) shows a 7-day mean of daily maximum values of 11.4 degrees C from continuous measurements collected in 1999. City of Bellingham unpublished data at station COB-PORTER (submitted by Sue Blake of Whatcom County on 17 December 2002) shows a 7-day mean of daily maximum values of 14.0 degrees C from continuous measurements collected in 1998. Data submitted by Dan Neff of the Lummi Fisheries Department show 8 excursions beyond the criterion between 7/30/92 and 9/4/92.						This listing was on the 1998 303(d) list based on single excursions taken in 1992. More recent continuous data from 1998 - 2000 shows that temperature standards are being met.

2	**10105**	**1**	**N**	**STRAIT OF GEORGIA**	**390KRD**	**48122I9A5**	**48.805**	**122.955**	**Dissolved oxygen**	**Water**
				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station GRG002 (Georgia Strait - N. of Patos Island) shows 46 excursions beyond the criterions out of 73 samples collected between 1993-2000					Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. These excursions beyond the criterion are a natural condition with no direct human-caused influence due to natural variations in the marine environment, based on the 11/03 judgment of Jan Newton (Dept. of Ecology). The waterbody name for this station in the 1998 303(d) Decision Matrix was "Rosario Strait."

2	**10094**	**1**	**N**	**WEST SOUND, HARNEY CHANNEL, & LOPEZ SOUND**	**390KRD**	**48122F8B4**	**48.515**	**122.845**		**Ammonia-N**	**Water**
				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station LOP001 (Lopez Island - Decatur Island) shows 0 excursions beyond the criterions out of 6 samples collected between 1993-2000							
2	**10095**	**1**	**N**	**WEST SOUND, HARNEY CHANNEL, & LOPEZ SOUND**	**390KRD**	**48122F8B4**	**48.515**	**122.845**		**Dissolved oxygen**	**Water**
				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station LOP001 (Lopez Island - Decatur Island) shows 5 excursions beyond the criterions out of 17 samples collected between 1993-2000						Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. These excursions beyond the criterion are a natural with no direct human-caused influence due to natural variations in the marine environment, based on the 11/03 judgment of Jan Newton (Dept. of Ecology).
				condition

				Basis					Remarks	
3	22558	1	N	**CLEAR LAKE**	075BVO	34N	05E	07	**Total Phosphorus**	**Water**
				Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 5 ug/L derived from the reported Carlson's Trophic State Index value which does not exceed the water quality standards nutrient criterion for the Puget Lowlands Ecoregion. Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 10 ug/L from samples collected in 1981 which does not exceed the water quality standards nutrient criterion for the Cascades Ecoregion.						
3	35075	1	N	**DAY LAKE**	013XXN	34N	07E	30	**Total Phosphorus**	**Water**
				Eilers et al. (1987) show a summer epilimnetic total phosphorus concentration of 9.8 ug/L in 1985 which does not exceed the water quality standards nutrient criterion for the Puget Lowlands Ecoregion. Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 10 ug/L derived from the reported Carlson's Trophic State Index value which does not exceed the water quality standards nutrient criterion for the Puget Lowlands Ecoregion.						
3	43040	1	N	**DEVILS LAKE**	844CTR	23N	04E	12	**Total Phosphorus**	**Water**
				Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 13 ug/L derived from the reported Carlson's Trophic State Index value which does not exceed the water quality standards nutrient criterion for the Puget Lowlands Ecoregion.						
3	39606	1	N	**EDISON SLOUGH**	TR24JW	0.926	36N	03E 33	**Temperature**	**Water**
				Skagit Stream Team unpublished data show excursions beyond the criterion in 2000, 2001 and 2002.					Changed from Category 5. These waters are either brackish or marine waters. Elevated tempertures due to exposure of intertidal sediments to the sun cause warming of the sediments at low tide and significantly affects the overlaying water on incoming tides. This is a natural condition with no apparent human causes. 07/21/04 -kk

				Johnson and Davis, 1996, excursion beyond the National Toxics Rule criterion calculated for tissue in mussel samples collected in 1995 from site near the old pilings near Joe Leary Slough, one mile north of the research station.						Newer data in Johnson, 2000, show PCB concentrations in Padilla Bay shellfish tissue meet the NTR criterion. See Ecology Publication #00-03-008, pg 33, titled "Results of a Screening Analysis for Metals and Organic Compounds in Shellfish from Padilla Bay and Vicinity" available on Ecology's website.

				Era-Miller, 2005, Verification of 303(d) Listings for Fish Tissue in the Skagit and Pend Oreille Rivers, shows no excursions during the verification study. Washington Department of Fish and Wildlife PSAMP database show the National Toxic Rule Criterion was exceeded in a composite of more than 5 muscle samples collected in 1992 from chinook salmon (Oncorhynchus tshawytscha) samples from station SKAGIT. Washington epartment of Fish and Wildlife PSAMP database show the National Toxic Rule Criterion was met in 1992-1994 from coho salmon (Oncorhynchus kisutch) samples from station SKAGIT.						Tissue samples are from anadromous or nonresident fish and do not include information on the likely source of the toxic pollutant as it relates to the waterbody segment. Since no evidence is available to connect the pollutant to the segment, it has been placed in the Waters of Concern Category.

				Thornburgh, 1995. ,excursions beyond the criterion at least once each year between 1992-1995 at Marine Drive. Department of Ecology unpublished data from the Stillaguamish TMDL Study shows a 7-day mean of daily maximum values of 14.9 for week ending 21 June 2001 at station 05M01 (Mainstem Stilly at Marine). Department of Ecology unpublished data from the Stillaguamish TMDL Study shows 0 excursions beyond the criterion out of 14 days collected. Stillaguamish Tribe unpublished data shows a 7-day mean of daily maximum values of 22.52 at the station 120 (Hatt Slough @ Marine Drive) in 2001. Snohomish County unpublished data from station MSMD (AT MARINE DRIVE) show excursions beyond the criterion from measurements collected in 1998, 1999 and 2001.						Changed from Category 5. These waters are either brackish or marine waters. Elevated tempertures due to exposure of intertidal sediments to the sun cause warming of the sediments at low tide and significantly affects the overlaying water on incoming tides. This is a natural condition with no apparent human causes. 07/21/04 -kk Also note that name changed to Hat Slough based on updated information on this site.

5	6344	1	N	**KI LAKE**	**734XSE**	**31N**	**04E**	**23**		**Total Phosphorus**	**Water**
				Completed Phase I State Clean Lakes Restoration Project in 1986 - Problems Encountered: Blue-green algae, low dissolved oxygen, sediment phosphorus recycling, fecal coliform bacteria. Entranco Engineers, 1986. Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 10 ug/L from samples collected in 1981 which does not exceed the water quality standards nutrient criterion for the Puget Lowlands Ecoregion. Snohomish County unpublished data show summer mean epilimnetic total phosphorus did not exceed the water quality standards nutrient criterion from samples collected between 1996-2002.					Snohomish County State of the Lakes Report identifies the lake as "healthy". Summer epilimnetic total phosphorus concentrations are consistently below 10ug/l. The lake does not experience regular nuisance algal blooms. Recent data do not support re-instationg a Category 5 listing for TP.

				Data from the Dept. of Ecology EIM database for the Project STILTMDL (STILLAGUAMISH TMDL) station 05TMS15 (MAIN STILLY CHANNEL NEAR RIVER MILE 15) shows 0 excursions beyond the criterion out of 2 samples collected between 08/00 - 11/01 .		
5	**14567**	**1**	**N**	**STILLAGUAMISH RIVER**	**QE93BW 15.577 31N 04E 03**	**Dissolved oxygen**	**Water**
				Data from the Dept. of Ecology EIM database for the Project STILTMDL (STILLAGUAMISH TMDL) station 05TMS6 (MAIN STILLY CHANNEL NEAR RIVER MILE 6) shows 0 excursions beyond the criterion out of 2 samples collected between 08/00 - 11/01 . Data from the Dept. of Ecology EIM database for the Project STILTMDL (STILLAGUAMISH TMDL) station 05TSILVA (MAINSTEM STILLAGUAMISH BELOW SILVANA) shows 0 excursions beyond the criterion out of 5 samples collected between 08/00 - 11/01 .		

WRIA	Listing ID	Category	98 List?	Waterbody Name	Location Information	Parameter	Medium
				Basis		Remarks	
5	14568	1	N	**STILLAGUAMISH RIVER**	**WO38NV 13.433 32N 06E 10**	**Dissolved oxygen**	**Water**
				Data from the Dept. of Ecology EIM database for the Project STILTMDL (STILLAGUAMISH TMDL) station 05TNORTH (N FORK STILLY @ HWY 530 BRIDGE) shows 0 excursions beyond the criterion out of 7 samples collected between 08/00 - 11/01.			
5	8222	1	N	**STILLAGUAMISH RIVER**	**QE93BW 28.853 31N 05E 09**	**Fecal Coliform**	**Water**
				Data from the Dept. of Ecology EIM database for the Project STILTMDL (STILLAGUAMISH TMDL) station 05TMS13 (MAIN STILLY CHANNEL NEAR RIVER MILE 13) shows the geometric mean of 31 does not exceed the criterion and that 0 % of the samples does not exceed the percentile criterion from 1 samples collected during 2000.			
5	10575	1	N	**STILLAGUAMISH RIVER**	**QE93BW 23.077 31N 05E 06**	**Lead**	**Water**
				Hallock (2001) Dept. of Ecology Ambient Monitoring Station 05A070 (STILLAGUAMISH RIVER NEAR SILVANA) shows 0 excursions beyond the criterion out of 4 samples collected between 1993 - 2001 Data from the Dept. of Ecology EIM database for the Project STILTMDL (STILLAGUAMISH TMDL) station 05TMS11 (MAIN STILLY CHANNEL AT I-5 BRIDGE) shows 0 excursions beyond the criterion out of 3 samples collected between 08/00 - 11/01 .			
5	14571	1	N	**STILLAGUAMISH RIVER**	**QE93BW 23.077 31N 05E 06**	**Mercury**	**Water**
				Data from the Dept. of Ecology EIM database for the Project STILTMDL (STILLAGUAMISH TMDL) station 05TMS11 (MAIN STILLY CHANNEL AT I-5 BRIDGE) shows 2 excursions beyond the criterion out of 6 samples collected between 08/00 - 11/01. Hallock (2001) Dept. of Ecology Ambient Monitoring Station 05A070 (STILLAGUAMISH RIVER NEAR SILVANA) shows 1 excursions beyond the criterion out of 4 samples collected between 1993 - 2001	Changed from Category 5 to Category 1. The Stillaguamish River Watershed Fecal Coliform, Dissolved Oxygen, pH, Mercury, and Arsenic TMDL Study completed by J. Joy in 2004 indicates the observed levels of Mercury are a natural condition.	
5	10577	1	N	**STILLAGUAMISH RIVER**	**QE93BW 23.077 31N 05E 06**	**Nickel**	**Water**
				Hallock (2001) Dept. of Ecology Ambient Monitoring Station 05A070 (STILLAGUAMISH RIVER NEAR SILVANA) shows 0 excursions beyond the criterion out of 6 samples collected between 1993 - 2001 Data from the Dept. of Ecology EIM database for the Project STILTMDL (STILLAGUAMISH TMDL) station 05TMS11 (MAIN STILLY CHANNEL AT I-5 BRIDGE) shows 0 excursions beyond the criterion out of 6 samples collected between 08/00 - 11/01 .			
5	10576	1	N	**STILLAGUAMISH RIVER**	**QE93BW 23.077 31N 05E 06**	**pH**	**Water**
				Hallock (2004), Dept. of Ecology ambient station 05A070 shows that of 31 samples none exceed the criterion. Hallock (2001) Dept. of Ecology Ambient Monitoring Station 05A070 (STILLAGUAMISH RIVER NEAR SILVANA) shows 0 excursions beyond the criterion out of 58 samples collected between 1993 - 2001. Data from the Dept. of Ecology EIM database for the Project STILTMDL (STILLAGUAMISH TMDL) station 05TMS11 (MAIN STILLY CHANNEL AT I-5 BRIDGE) shows 0 excursions beyond the criterion out of 13 samples collected between 08/00 - 11/01. Data from the Dept. of Ecology EIM database for the Project STILTMDL (STILLAGUAMISH TMDL) station 05TPILUP (UPSTREAM OF PILCHUCK CREEK MOUTH) shows 0 excursions beyond the criterion out of 1 sample collected between 08/00 - 11/01.	The "listed in 96" flag was changed from N to Y on 4/5/05. This location was listed on the 1996 303(d) list based on 3 excursions and then dropped from the 1998 List. A review of data show that no excursions have occurred between 1993 and 2003 at ambient monitoring station 05A070. If this listing had been brought forward to the 1998 list, it would be a candidate for removal to Category 1 based on recent monitoring. 04/05/05 -kk

				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station ADM001 (ADMIRALTY INLET - BUSH PT.) shows 41 excursions beyond the criterions out of 91 samples collected between 1993-2000					Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. These excursions beyond the criterion are a natural condition due to the influence from upwelled deepwater based on the 6/97 judgment of Jan Newton (Dept. of Ecology)	
6	**15699**	**1**	**N**	**ADMIRALTY INLET (INNER)**	**390KRD**	**48122A6D1**	**48.035**	**122.615**	**Fecal Coliform**	**Water**

				Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 7 ug/L derived from the reported Carlson's Trophic State Index value which does not exceed the water quality standards nutrient criterion for the Puget Lowlands Ecoregion. Snohomish County unpublished data show summer mean epilimnetic total phosphorus did not exceed the water quality standards nutrient criterion from samples collected between 1996-2002.					Snohomish County's 2003 State of the Lakes Report identifies the lake as "healthy". Summer eplimnetic total phosphorus concentrations are consistently below 20ug/l. The lake does not experience regular nuisance algal blooms.	
7	**22614**	**1**	**N**	**COPPER LAKE**	**529PYQ**	**29N**	**10E**	05	**Total Phosphorus**	**Water**
				Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 4 ug/L derived from the reported Carlson's Trophic State Index value which does not exceed the water quality standards nutrient criterion for the Puget Lowlands Ecoregion. Eilers et al. (1987) show a summer epilimnetic total phosphorus concentration of 6.4 ug/L in 1985 which does not exceed the water quality standards nutrient criterion for the Cascades Ecoregion.						
7	**35093**	**1**	**N**	**COUGAR LAKE**	**359HZP**	**25N**	**10E**	33	**Total Phosphorus**	**Water**
				Eilers et al. (1987) show a summer epilimnetic total phosphorus concentration of 1.6 ug/L in 1985 which does not exceed the water quality standards nutrient criterion for the Cascades Ecoregion.						
7	**22616**	**1**	**N**	**CUP LAKE**	**582SLN**	**27N**	**13E**	16	**Total Phosphorus**	**Water**
				Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 4 ug/L derived from the reported Carlson's Trophic State Index value which does not exceed the water quality standards nutrient criterion for the Puget Lowlands Ecoregion.

				U.S. EPA, 1996. Predictive modeling of groundwater leachate near the Tulalip Landfill Superfund Site show that concentrations are likely at levels that do not meet surface water quality standards. Cusimano (1997) station Snodry27 (Ebbey Slough (EBE27)) shows 0 excursions beyond the criterion out of 4 samples collected between 02/96 - 04/96.					Changed from Category 4B to Category 1 on 02/17/05 based on information from the EPA web site that the superfund project was completed and that "the site no longer poses a significant threat to public health or the environment and, therefore, no further cleanup actions are necessary." -kk EPA Record of Decision for Tulalip Landfill Superfund Site March 1996. The information developed under CERCLA meet the four EPA requirements for excluding these waters from the list under federal regulations for "other pollution control requirements" under 40 CFR 130.7(b)(1) which are: (1) The Record of Decision, remedial investigation and feasibility study describe the controls relative to the problem, (2 and 3) a Cleanup Action Plan identifies the schedule of when controls are to be implemented, and (4) the compliance monitoring required to show cleanup effectiveness.

				Basis					Remarks	
7	23014	1	N	**MEADOW LAKE**	282EYB	28N	07E	18	**Total Phosphorus**	**Water**
				Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 20 ug/L from samples collected in 1981 which does not exceed the water quality standards nutrient criterion for the Puget Lowlands Ecoregion.					Snohomish County's 2003 State of the Lakes Report identifies the lake as "at risk" of future impairment from invasive species, but not from nutrients unless surrounding development increases substantially. Summer epilimnetic total phosphorus concentrations are high, consistently exceed 20 ug/l, however, high nutrient levels appear to be the natural condition for this lake.	
7	22648	1	N	**MENZEL LAKE**	362PIF	29N	07E	04	**Total Phosphorus**	**Water**
				Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 16 ug/L derived from the reported Carlson's Trophic State Index value which does not exceed the water quality standards nutrient criterion for the Puget Lowlands Ecoregion.						
7	22649	1	N	**MOOLOCK LAKE**	701CRW	24N	15E	15	**Total Phosphorus**	**Water**
				Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 3 ug/L derived from the reported Carlson's Trophic State Index value which does not exceed the water quality standards nutrient criterion for the Cascades Ecoregion.						
7	22650	1	N	**NADEAU LAKE**	065CNF	24N	09E	22	**Total Phosphorus**	**Water**
				Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 4 ug/L derived from the reported Carlson's Trophic State Index value which does not exceed the water quality standards nutrient criterion for the Cascades Ecoregion.						
7	35096	1	N	**NAZANNE LAKE**	864PDE	24N	12E	01	**Total Phosphorus**	**Water**
				Eilers et al. (1987) show a summer epilimnetic total phosphorus concentration of 1.2 ug/L in 1985 which does not exceed the water quality standards nutrient criterion for the Cascades Ecoregion.						
7	35331	1	N	**OLNEY CREEK**	NI13PB	1.13	28N	08E 25	**Dissolved oxygen**	**Water**
				Port Blakely Tree Farms unpublished data from station OL1 (submitted by Blake Murden on 10 Decemeber 2002) shows no excursions beyond the criterion from measurements collected in 2001-2002.						
7	35368	1	N	**OLNEY CREEK**	NI13PB	7.209	28N	08E 14	**Dissolved oxygen**	**Water**
				Port Blakely Tree Farms unpublished data from station OL3 (submitted by Blake Murden on 10 Decemeber 2002) shows no excursions beyond the criterion from measurements collected in 2001-2002.

7	22655	1	N	**RATTLESNAKE LAKE**	748LIZ		23N	08E 34	Total Phosphorus	Water
				Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 4 ug/L derived from the reported Carlson's Trophic State Index value which does not exceed the water quality standards nutrient criterion for the Puget Lowlands Ecoregion.						
7	6365	1	N	**ROESIGER (NORTH ARM) LAKE**	086KWB		29N	07E 21	Total Phosphorus	Water
				Snohomish County unpublished data show summer mean epilimnetic total phosphorus did not exceed the water quality standards nutrient criterion from samples collected between 1996-2002. Completed Phase I State Clean Lakes Restoration Project in 1990 - Problems Encountered: Blue-green algae, hypolimnetic anoxia, tributary nutrient inputs, low buffering capacity. KCM, 1989. Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 10 ug/L from samples collected in 1981 which does not exceed the water quality standards nutrient criterion for the Puget Lowlands Ecoregion.					Snohomish County's 2003 State of the Lakes Report identifies the lake as "healthy". The summer epilimnetic total phosphorus concentrations are consistently below 10 ug/L. The lake experiences occasional nuisance algal blooms. Phase II State Clean Lakes Restoration Project: Control measures underway based on Phase I study -sediment removal/dredging (limited), watershed nutrient management (timber harvesting, septic system management), public education.

7	40888	1	N	**ROESIGER (SOUTH ARM) LAKE**	086KWB 29N 07E 28	Total Phosphorus	Water
				Snohomish County unpublished data show summer mean epilimnetic total phosphorus did not exceed the water quality standards nutrient criterion from samples collected between 1996-2002.		Snohomish County's 2003 State of the Lakes Report identifies the lake as "healthy". The summer epilimnetic total phosphorus concentrations are consistently below 10 ug/L. The lake experiences occasional nuisance algal blooms.	
7	22657	1	N	**ROSS LAKE**	665SIL 48121I0D3 48.835 121.035	Total Phosphorus	Water
				Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 3 ug/L derived from the reported Carlson's Trophic State Index value which does not exceed the water quality standards nutrient criterion for the Puget Lowlands Ecoregion.		The basis cited for the assessment applies to the entire lake. The center grid segment of the lake was selected to represent this information.	
7	22658	1	N	**SAUCER LAKE**	286RVN 27N 13E 16	Total Phosphorus	Water
				Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 2 ug/L derived from the reported Carlson's Trophic State Index value which does not exceed the water quality standards nutrient criterion for the Cascades Ecoregion.			
7	40966	1		**SERENE LAKE**	670OTO 27N 10E 31	Total Phosphorus	Water
				Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 1 ug/L derived from the reported Carlson's Trophic State Index value which does not exceed the water quality standards nutrient criterion for the Cascades Ecoregion. Eilers et al. (1987) show a summer epilimnetic total phosphorus concentration of 2.7 ug/L in 1985 which does not exceed the water quality standards nutrient criterion for the Cascades Ecoregion.		
7	6369	1	N	**SHOECRAFT LAKE**	471OUJ 31N 04E 33	Total Phosphorus	Water
				Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 14 ug/L derived from the reported Carlson's Trophic State Index value which does not exceed the water quality standards nutrient criterion for the Puget Lowlands Ecoregion. Completed Phase I State Clean Lakes Restoration Project in 1986 - Problems Encountered: Blue-green algae, low dissolved oxygen, sediment phosphorus recycling, fecal coliform bacteria. Entranco Engineers, 1986. Snohomish County unpublished data show summer mean epilimnetic total phosphorus did not exceed the water quality standards nutrient criterion from samples collected between 1996-2002.		Listing ID 22660 rolled in to this listing 04/06/04 -kk Snohomish County's 2003 State of the Lake report identifies the lake as "healthy". Recent data does not support re-instating a Category 5 listing for TP. Summer epilimnetic
total							
							phosphorus concentrations are consistently below 20 ug/l. The lake experiences occasional nuisance algal blooms.

7	7407	1	Y	**SNOHOMISH RIVER**	YS20QN	0	29N	05E	08	Temperature	Water
				Cusimano (1997) station Snodry21 (Snohomish River (SNO21)) shows 2 excursions beyond the criterion measured on these dates: 96/08/27, 96/08/28, Five excursions beyond the criterion at Ecology Ambient Monitoring station PSS015 between 1985 and 1987.					This listing was reviewed by Department of Ecology Coastal and Estuarine Assessment Unit staff, who concluded that there are insufficient human influences in this area to produce significant temperature increases. Therefore, the temperature exceedances at this location were deemed to be a result of natural conditions.

				Garrigues (1996) station QCRTR1 (QUILCEDA TRIB UP) shows 0 excursions beyond the criterion out of 3 samples collected between 05/95 - 12/95.							
7	14748	1	N	**UNNAMED CREEK**	WN14QS	0	30N	05E	04	Temperature	Water
				Garrigues (1996) station QCRTR2 (QUILCEDA TRIB DOWN) shows 0 excursions beyond the criterion out of 3 samples collected between 05/95 - 12/95.							
7	22923	1	N	**WAGNER LAKE**	366THM	28N	07E	29		Total Phosphorus	Water
				Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 10 ug/L from samples collected in 1981 which does not exceed the water quality standards nutrient criterion for the Puget Lowlands Ecoregion.						Changed from Category 2 to Category 1 on 02/01/05. Snohomish County State of the Lakes Report (2003) this lake is "healthy". Summer epilimnetic total phosphorus concentrations are usually below 20 ug/L with occasional spikes above that level. Concentrations in the hypolimnion are higher. Moderate nutrient levels appear to be natural for mesotrophic lake. -kk

				Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 22 ug/L derived from the reported Carlson's Trophic State Index value which exceeds the water quality standards nutrient criterion for the Puget Lowlands Ecoregion.					These data are more than 20 years old and there are no recent data. There is no anecdotal evidence to show that total phosphorus is a continuing problem for this lake (per Snohomish County Surface Water Management). Snohomish County states that moderate to high nutrient levels may be natural for this shallow lake.

8	**12154**	**1**	**N**	**COTTAGE LAKE**	**491TVC 26N 06E 07**	**Fecal Coliform**	**Water**
				King County unpublished data from station A707 show a geometric mean of 71 cfu/100mL with 0% exceeding the percentile criterion during 1999. King County unpublished data from station A707 show a geometric mean of 15 cfu/100mL with 0% exceeding the percentile criterion during 1998.		Changed from Category 5 to Category 1 on 7/20/05. A review of the raw data submitted by King County shows that there was insufficient data to evaluate a geometric mean. The data represents individual samples. None of the samples exceed the criteria for LAK class waters. -kk

8	**22674**	**1**	**N**	**DESIRE LAKE**	**144YNF**	**23N**	**05E**	**36**	**Total Phosphorus**	**Water**
				Completed Phase I State Clean Lakes Restoration Project: KCSWMD and KCM, 1994 KCSWMD and KCM, 1995, Trophic state is eutrophic. Average summer epilimnetic phosphorus was 30 ug/l and chlorophyll levels were 15 ug/l.					King County Surface Water Management is implementing (not using state grant funds) the restoration plan recommended from the Phase I project. External sources of phosphorus will be controlled through 7 recommended watershed measures including forest retention, wetland restoration, shoreline wetland revegetation, storm water treatment, ditch maintenance, homeowner applied BMPs, and sewering. In- lake recycling will be controlled through an alum treatment. The above information meets EPA guidance for excluding the lake from the list under federal regulation 40 CFR130.7(b)(1)(iii).

				King County data (submitted by Kimberle Stark on 4/15/04) station LTED04 (Elliott Bay) shows 4 excursions beyond the criterion from samples collected in 2002 and 2003.					Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. King County DNR 12/17/04 presents information and data demonstrating natural conditions. Albertson Memo, 12/16/05, BPJ, also demonstrates that excursions beyond the criterion have naturally occurred since measurements were first recorded in 1933 and continue on through the present. -sb

8	6347	1	N	**LARSEN LAKE**	994BFD	25N	05E	35		**Total Phosphorus**	**Water**
				Completed Phase I State Clean Lakes Restoration Project in 1987 - Problems Encountered: Blue-green algae, low dissolved oxygen, sediment phosphorus recycling, low transparency, storm water. KCM, 1987. Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 292 ug/L from samples collected in 1981 which exceeds the water quality standards nutrient criterion for the Puget Lowlands Ecoregion.						Completed Phase II State Clean Lakes Restoration Project in 1995: KCM, 1993. Control measures underway based on the Phase I study - phosphorus precipitation/inactivation, artificial circulation, structural storm water controls, public education. . The City of Bellevue Utilities Department has had an on-going water quality monitoring program for Larsen Lake since 1993. The monthly monitoring frequency has shown that the goals for the restoration project have been met. Per EPA guidance, this lake can be excluded from the list under federal regulation 40 CFR130.7(b)(1)(iii). (taken from 1998 list database)

				Johnson, 2001, provides King County data colllected 1998-1999 showing no excursions beyond the criterion and provides rationale that the earlier samples were calculated values for the dissolved fraction (ie, not analysed directly). One excursion beyond the criterion collected by King County Surface Water Management at the station next to the SR-900 culvert crossing in 1994. Johnson, 2001, provides King County data colllected 1998-1999 showing no excursions beyond the criterion and provides rationale that the earlier samples were calculated values for the dissolved fraction (ie, not analysed directly). One excursion beyond the criterion collected by King County Surface Water Management at the station next to the SR-900 culvert crossing in 1994.						Verification monitoirng and samples indicate that this water is meeting standards for copper. See Ecology Publication #02-03-039 and Johnson, June 4, 2001 Memorandum to Water Quality Program. Subject: Recommendations to De-list or Verify Certain 303(d) Waterbodies for Metals Excursions in Water.

				City of Redmond (data submitted by Daren Baysinger on 4/24/04), data from station 18 (Main Branch of Peters Creek@ Shadowbrook Apts.) meets tested standards for this parameter.			
8	**42092**	**1**	**N**	**PETERS CREEK**	**ZN74FV 0.005 25N 05E 03**	**Temperature**	**Water**
				City of Redmond (data submitted by Daren Baysinger on 4/24/04), data from station 32 (Peters Creek @ 87th ST) meets tested standards for this parameter.			
8	**21567**	**1**	**N**	**PINE LAKE**	**LH94AN 24N 06E 09**	**Total Phosphorus**	**Water**
				King County Volunteer Citizen Monitoring Program unpublished data show show summer mean epilimnetic total phosphorus did not exceed the water quality standards nutrient criterion from samples collected between 1998-2002. Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 17 ug/L derived from the reported Carlson's Trophic State Index value which does not exceed the water quality standards nutrient criterion for the Puget Lowlands Ecoregion. Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 16 ug/L derived from the reported Carlson's Trophic State Index value which does not exceed the water quality standards nutrient criterion for the Puget Lowlands Ecoregion.

				King County data (submitted by Kimberle Stark on 4/15/04) station PTWELLS1 (Point Wells) shows 60 excursions beyond the criterion from samples collected in 2002 and 2003.						Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. Albertson Memo, 12/16/05, BPJ, also demonstrates that excursions beyond the criterion have naturally occurred since measurements were first recorded in 1933 and continue on through the present. King County DNR 12/17/04 presents information and data demonstrating natural conditions.

				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station PSB003 (Puget Sound Main Basin - West Point) shows 34 excursions beyond the criterions out of 89 samples collected between 1993-2000					Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. These excursions beyond the criterion are a natural condition with no direct human-caused influence due to natural variations in the marine environment, based on the 11/03 judgment of Jan Newton (Dept. of Ecology).	
8	**42478**	**1**	**N**	**PUGET SOUND (CENTRAL)**	**390KRD**	**47122H3B9**	**47.715**	**122.395**	**Dissolved oxygen**	**Water**
				King County data (submitted by Kimberle Stark on 4/15/04) station CK200P (Carkeek outfall) shows 39 excursions beyond the criterion from samples collected in 2002 and 2003.					Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. Albertson Memo, 12/16/05, BPJ, also demonstrates that excursions beyond the criterion have naturally occurred since measurements were first recorded in 1933 and continue on through the present. 8	**13600**	**1**	**N**	**THORNTON CREEK**	**VQ98YZ 1.219 26N 04E 34**	**Copper**	**Water**
				King County unpublished data from station 434 shows the chronic criterion was exceeded on 11 June 2001 and 14 November 2001.		Changed from Category 5 to Categor 1 on 3/8/05. Original calculations were based on derived values of hardness, however, information provided with public comment provided the actual values. When recalculated, the samples collected at station 434 on 11 June 2001 and 14 November 2001 do NOT exceed the chronic criterion for copper. -kk

9	**10166**	**1**	**N**	**ELLIOTT BAY**	**390KRD**	**47122F3J6**	**47.595**	**122.365**	**Ammonia-N**	**Water**
				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station ELB015 (Elliott Bay - E. of Duwamish Head) shows 0 excursions beyond the criterions out of 43 samples collected between 1993-2000						
9	**14753**	**1**	**N**	**ELLIOTT BAY**	**390KRD**	**47122F3J6**	**47.595**	**122.365**	**Arsenic, Inorganic**	**Tissue**
				Johnson and Roose, 2002. show no excursion beyond the criterion in a composite of edible tissue of English sole samples collected in 2000 and Quilback rockfish samples collected in 1998.						
9	**10167**	**1**	**N**	**ELLIOTT BAY**	**390KRD**	**47122F3J6**	**47.595**	**122.365**	**Dissolved oxygen**	**Water**
				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station ELB015 (Elliott Bay - E. of Duwamish Head) shows 32 excursions beyond the criterions out of 97 samples collected between 1993-2000					Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. Albertson Memo, 2/11/05, BPJ, demonstrates that excursions beyond the criterion have naturally occurred since measurements were first recorded in 1933 and continue on through the present. -kk	
9	**42490**	**1**	**N**	**ELLIOTT BAY**	**390KRD**	**47122G4J0**	**47.695**	**122.405**	**Fecal Coliform**	**Water**
				King County data (submitted by Kimberle Stark on 4/15/04) station KSLU03 (Golden Gardens) shows 2 of 3 samples (66.6%) exceeded the percentile criterion in year 2002.					Changed from Category 5 to Category 1 on 3/8/05. 2/11/05, BPJ, demonstrates that excursions beyond the criterion have naturally occurred since measurements were first recorded in 1933 and continue on through the present. -kk	Albertson,
9	**10169**	**1**	**N**	**ELLIOTT BAY**	**390KRD**	**47122F3J6**	**47.595**	**122.365**	**Temperature**	**Water**
				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station ELB015 (Elliott Bay - E. of Duwamish Head) shows 1 excursions beyond the criterions out of 98 samples collected between 1993-2000					This listing was reviewed by Department of Ecology Coastal and Estuarine Assessment Unit staff [see Grantham memo 4/2005, attachment (d)], who concluded that these exceedances are a natural condition and there are insufficient human influences in this area to produce significant temperature increases.	
9	**11474**	**1**	**N**	**FRIDAY CREEK, E.F.**	**XO40BH**	**0.794**	**20N**	**10E**	**01**	**Dissolved oxygen**	**Water**
				Department of Ecology unpublished data from EMAP station R0CE99-103 (EF FRIDAY CREEK) shows no excursions beyond the criterion from measurements made in 2000.							
9	**11475**	**1**	**N**	**FRIDAY CREEK, E.F.**	**XO40BH**	**0.794**	**20N**	**10E**	**01**	**pH**	**Water**
				Department of Ecology unpublished data from EMAP station R0CE99-103 (EF FRIDAY CREEK) shows no excursions beyond the criterion from measurements made in 2000.

				King County data (submitted by Kimberle Stark on 4/15/04) station LSNT01 (Dolphin Point) shows 66 excursions beyond the criterion from samples collected in 2002 and 2003.						Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. King County DNR 12/17/04 presents information and data demonstrating natural conditions. Albertson Memo, BPJ, also demonstrates that excursions beyond the criterion have naturally occurred since measurements were first recorded in 1933 and continue on through the present. -sb

				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station EAP001 (EAST PASSAGE - SW OF THREE TREE POINT) shows 26 excursions beyond the criterions out of 50 samples collected between 1993-2000					Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. These excursions beyond the criterion are a natural condition with no direct human-caused influence due to natural variations in the marine environment, based on the 11/03 judgment of Jan Newton (Dept. of Ecology).	
9	**42482**	**1**	**N**	**PUGET SOUND (S-CENTRAL) AND EAST PASSAGE**	**390KRD**	**47122F4H1**	**47.575**	**122.415**	**Dissolved oxygen**	**Water**
				King County data (submitted by Kimberle Stark on 4/15/04) station LSKQ06 (Alki outfall) shows 32 excursions beyond the criterion from samples collected in 2002 and 2003.					Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. Albertson Memo, 12/16/05, BPJ, also demonstrates that excursions beyond the criterion have naturally occurred since measurements were first recorded in 1933 and continue on through the present. King County DNR 12/17/04 presents information and data demonstrating natural conditions.

				Johnson, 2001, provides data collected by King County in 1998-1999 and by Landau Associates in 1990-2002 showing the chronic criterion is being met. Yake, 1985, two excursions beyond the criterion of dissolved sample at two locations on the same segment on 5/22/84 and 6/27/84.						Changed from Category 5. Johnson, 2001, studied the validity of metal listings for certain waters and determined all samples were within standards. See Johnson, June 4, 2001 Memorandum to Water Quality Program. Subject: Recommendations to De-list or Verify Certain 303(d) Waterbodies for Metals Excursions in Water.

WRIA	Listing ID	Category	98 List?	Waterbody Name	Location Information	Parameter	Medium
				Basis		Remarks	
9	13751	1	N	**SPRINGBROOK (MILL) CREEK**	**BY98ES 1.444 23N 04E 24**	**Copper**	**Water**
				King County unpublished data from station 317 shows the chronic criterion was exceeded on 12 June 2000 and 30 April 2001. Johnson, 2001, provides data collected by King County in 1998-1999 and by Landau Associates in 1990-2002 showing the chronic criterion is being met. 1 excursion beyond the criterion at Ecology ambient monitoring station 09E070 (RM 0.1) on 11/28/84.		Changed from Category 5. Johnson, 2001, studied the validity of metal listings for certain waters and determined all samples were within standards.
9	13752	1	N	**SPRINGBROOK (MILL) CREEK**	**BY98ES 1.444 23N 04E 24**	**Lead**	**Water**
				King County unpublished data from station 317 show the chronic criterion was met in all samples collected between 1998 and 2002.			
9	8646	1	Y	**SPRINGBROOK (MILL) CREEK**	**SQ03FA 0 23N 04E 24**	**Mercury**	**Water**
				Johnson and Golding, 2002, show the chronic criterion was met in all 6 samples collected in 2001-2002. Numerous excursions beyond the criterion at Ecology ambient monitoring station 09E090 (RM 1.5) collected between 1987 and 1990.		Verification of monitoring data (Johnson and Golding, 2002) indicate that this water is meeting criteria for mercury.
9	13753	1	Y	**SPRINGBROOK (MILL) CREEK**	**BY98ES 1.444 23N 04E 24**	**Mercury**	**Water**
				Johnson and Golding, 2002, show the chronic criterion was met in all 6 samples collected in 2001-2002. King County unpublished data from station 317 show the chronic criterion was exceded on 25 July 2001 and 31 July 2002. Numerous excursions beyond the criterion at Ecology ambient monitoring station 09E070 (RM 0.1) collected between 1987 and 1990.		Because King County measurements are below the reporting limit and concentrations are at the detection limit, there is substantial uncertainty associated with the data (Johnson, ECY/EAP, 2003). The results of ECY/EAP mercury monitoring in Mill Creek (Johnson and Golding, 2002)showed that chronic criteria was met in all samples. Because of substantial uncertainty with King County data and recent EAP results, this segment has been placed in Category 1.
9	13754	1	N	**SPRINGBROOK (MILL) CREEK**	**BY98ES 1.444 23N 04E 24**	**Nickel**	**Water**
				King County unpublished data from station 317 show the chronic criterion was met in all samples collected between 1998 and 2002.			
9	12817	1	N	**SPRINGBROOK (MILL) CREEK**	**BY98ES 1.444 23N 04E 24**	**Pentachlorophenol**	**Water**
				Davis 1998. show no excursions beyond the chronic criterion out of 2 samples collected at station SPRINGBR in 1996.			
9	13755	1	N	**SPRINGBROOK (MILL) CREEK**	**BY98ES 1.444 23N 04E 24**	**SELENIUM**	**Water**
				King County unpublished data from station 317 show the chronic criterion was met on all samples collected between 1998 and 2002.			
9	13756	1	N	**SPRINGBROOK (MILL) CREEK**	**BY98ES 1.444 23N 04E 24**	**Silver**	**Water**
				King County unpublished data from station 317 show the acute criterion was met on all samples collected between 1998 and 2002.

				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station NSQ001 (Nisqually Reach - Nisqually R. Delta) shows 6 excursions beyond the criterions out of 20 samples collected between 1993-2000					This listing was reviewed by Department of Ecology Coastal and Estuarine Assessment Unit staff [see Grantham memo 4/2005, attachment (d)], who concluded that these exceedances are a natural condition and there are human influences in this area to produce significant temperature increases. These excursions beyond the criterion are a natural with no direct human-caused influence due to natural variations in the marine environment, based on the 11/03 judgment of Jan Newton (Dept. of Ecology).

				Department of Health unpublished data collected from station NISQUALLY REACH-240 show a geometric mean of 4 cfu/100mL and 3.33333333333333% of samples exceed the percentile criterion with the last sample collected on 3-Dec-2001. Department of Health unpublished data collected from station NISQUALLY REACH-241 show a geometric mean of 4 cfu/100mL and 0% of samples exceed the percentile criterion with the last sample collected on 3-Dec-2001.					The 1998 listing was based on Department of Health Consideration of Conditionally Approved Commercial Shellfish Area west of the Nisqually River based partially on data from station 34 that exceed the criterion. More recent data monitoring shows that fecal coliform standards are being met.

13	**3764**	**1**	**N**	**SQUAXIN, PEALE, AND PICKERING PASSAGES**	**390KRD**	**47122B9F1**	**47.155**	**122.915**	**Temperature**	**Water**
				Data collected by Ecology (summarized by Eisner and Newton, 1997) show 4 excursions beyond the criterion out of 5 samples (80%) at station BG-2 between 1992 and 1994.					This listing was reviewed by Department of Ecology Coastal and Estuarine Assessment Unit staff [see Grantham memo 4/2005, attachment (d)], who concluded that these exceedances are a natural condition and there are	
insufficient									human influences in this area to produce significant temperature increases.

				Department of Health unpublished data collected from station NORTH BAY-2 show a geometric mean of 4 cfu/100mL and 0% of samples exceed the percentile criterion with the last sample collected on 10-Dec-2001. Department of Health unpublished data collected from station NORTH BAY-11 show a geometric mean of 4 cfu/100mL and 0% of samples exceed the percentile criterion with the last sample collected on 10-Dec-2001. Department of Health unpublished data collected from station NORTH BAY-12 show a geometric mean of 5 cfu/100mL and 3.33333333333333% of samples exceed the percentile criterion with the last sample collected on 10-Dec-2001.					This listing was based on consideration of Department of Health Approved Commercial Shellfish Area in North Bay based partially on data at station 24 that exceeded the criterion (from the Annual Growing Area Review ending December 1996). More recent data monitoring shows that fecal coliform standards are being met. All other stations tested now meet standards for fecal coliform due to restoration activities.

				Kitsap County unpublished data at station AG02 (NEARSHORE NE CORNER OF BRIDGE (PUGET PWR)) show excursions beyond the criterion in measurements collected in 1996-2001.						This listing was reviewed by Department of Ecology Coastal and Estuarine Assessment Unit staff [see Grantham memo 4/2005, attachment (d)], who concluded that these exceedances are a natural condition and there are insufficient human influences in this area to produce significant temperature increases.

				Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 7 ug/L derived from the reported Carlson's Trophic State Index value which does not exceed the water quality standards nutrient criterion for the Puget Lowlands Ecoregion.							
15	**38431**	**1**	**N**	**BIG ANDERSON CREEK**	**HL10ZJ**	**0.151**	**24N**	**02W**	**17**	**Dissolved oxygen**	**Water**
				Kitsap County unpublished data show excursions beyond the criterion in measurements collected in 1997, 1998 and 2001 at station BA01.						Kitsap County Health Department (Kreis, 5/12/05) provides justification that low D.O. values are historically recorded at this monitoring station during warm season conditions. These values are believed to be caused by the creek's origin in a large wetland as well as low steam flow during these time periods. The measured excursions beyond the criterion are a natural condition due to the large open wetlands at the headwaters per the 3 January 2003 submittal by Jim Zimny of Kitsap County.	
15	**38432**	**1**	**N**	**BIG ANDERSON CREEK**	**HL10ZJ**	**0.151**	**24N**	**02W**	**17**	**Fecal Coliform**	**Water**

				Kitsap County unpublished data show excursions beyond the criterion in measurements collected in 1996-2001 at station BB02. Kitsap County unpublished data show excursions beyond the criterion in measurements collected in 1996-2001 at station BB03.					Kitsap County Health Department (Kreis, 5/12/05) provides justification that Low DO values are historically recorded at two creek monitoring stations during warm season These values are believed to be caused by the creek's in a large wetland and its subsequent flow through Lake Symington, a manmade, enhanced wetland impoundment.

WRIA	Listing ID	Category	98 List?	Waterbody Name	Location Information				Parameter	Medium
				Basis					Remarks	
15	**38503**	**1**	**N**	**COLVOS PASSAGE**	**390KRD**	**47122F4B9**	**47.515**	**122.495**	**Dissolved oxygen**	**Water**
				Kitsap County unpublished data at station CP01 (NEARSHORE POINT SOUTHWORTH SOUTHEAST OF FERRY TERM.) show excursions beyond the criterion in measurements collected in 1996-1998.					Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. The measured excursions beyond the criterion are a natural condition per the 3 January 2003 submittal by Jim Zimny of Kitsap County. Changed to Category 2 per above statement. -kk	
15	**38507**	**1**	**N**	**COLVOS PASSAGE**	**390KRD**	**47122E5G2**	**47.465**	**122.525**	**Dissolved oxygen**	**Water**
				Kitsap County unpublished data at station CP03 (NEARSHORE FRAGARIA) show excursions beyond the criterion in measurements collected in 1996-1998.					Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. Kitsap County Health Department (Kreis, 5/12/05) provides justification that historic DO exceedances occur annually in the late fall at this nearshore monitoring station due to the influx of lower DO ocean water into Puget Sound. The measured excursions beyond the criterion are a natural condition per the 3 January 2003 submittal by Jim Zimny of Kitsap County. Changed to Category 2 per above statement. -kk	
15	**38511**	**1**	**N**	**COLVOS PASSAGE**	**390KRD**	**47122E5C3**	**47.425**	**122.535**	**Dissolved oxygen**	**Water**
				Kitsap County unpublished data at station CP06 (NEARSHORE OLALLA BAY NEAR MOUTH OF OLALLA CREEK) show excursions beyond the criterion in measurements collected in 1998.					Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. The measured excursions beyond the criterion are a natural condition per the 3 January 2003 submittal by Jim Zimny of Kitsap County.

				Plotnikoff and Wiseman, 2002, at station 101D (Dewatto River) show no biological degredation of aquatic life based the River Invertebrate Prediction and Classification System (RIVPACS) score of 1.05.						
15	**38527**	**1**	**N**	**DEWATTO RIVER**	**AB37HC**	**12.172**	**24N**	**02W** **32**	**Dissolved oxygen**	**Water**
				Kitsap County unpublished data show excursions beyond the criterion in measurements collected in 1996, 1997, 1998, 1999 and 2001 at station DW01.					According to Plotnikoff, 2003, the exceedances are not due to human activities. The natural sources of the exceedances are wetlands, beaver dams and naturally low flow. Biological monitoring results in the Dewatto River are consistently good. The measured excursions beyond the criterion are a natural condition per the 3 January 2003 submittal by Jim Zimny of Kitsap County.

				Kitsap County unpublished data show 2 excursions beyond the criterion out of 47 measurements collected in 1996-2001 at station DW01.						According to Plotnikoff, 2003, the exceedances are not due to human activities. The natural sources of the exceedances are wetlands, beaver dams and naturally low flow. Biological monitoring results in the Dewatto River are consistently good. The measured excursions beyond the criterion are a natural condition per the 3 January 2003 submittal by Jim Zimny of Kitsap County.

				Cubbage, 1992, excursions in clam tissue beyond the National Toxic Rule criterion in 1989.						Verificatioin sampling study by Johnson and Roose, 2002, conclude that the high arsenic concentrations in tissue samples in this area are a natural condition based on a comparison to reference areas. Further, note that since very little of the total arsenic in fish or shellfish tissue is inorganic, listings based on total arsenic are likely not appropriate (Johnson, ECY/EAP, 2003).

Verification sampling study by Johnson and Roose, 2002, conclude that the high arsenic concentrations in tissue samples in this area are a natural condition based on a comparison to reference areas. Further, note that since very little of the total arsenic in fish or shellfish tissue is inorganic, listings based on total arsenic are likely not appropriate (Johnson, ECY/EAP, 2003).

				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station DYE004 (Dyes Inlet - NE of Chico Bay) shows 0 excursions beyond the criterions out of 11 samples collected between 1993-2000						
15	**15728**	**1**	**Y**	**DYES INLET AND PORT WASHINGTON NARROWS**	**390KRD**	**47122G6C8**	**47.625**	**122.685**	**Fecal Coliform**	**Water**
				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station Station DYE004 (Dyes Inlet - NE of Chico Bay) shows a geometric mean of 5 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 1 samples collected during 1991. Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station Station DYE004 (Dyes Inlet - NE of Chico Bay) shows a geometric mean of 1 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 3 samples collected during 1992. Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station Station DYE004 (Dyes Inlet - NE of Chico Bay) shows a geometric mean of 2 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 1 samples collected during 1994. Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station Station DYE004 (Dyes Inlet - NE of Chico Bay) shows a geometric mean of 3 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 2 samples collected during 1995.					This listing was based on Department of Health Conditionally Approved Commercial Shellfish Area at Chico Bay based partially on data sampled station 41 that exceed the criterion. More recent continuous Ecology ambient monitoring data shows that fecal coliform standards are being met. TRS different in 1998 listing.

				Washington Department of Fish and Wildlife PSAMP database show the National Toxic Rule Criterion was met in 1998 and 2000 from coho salmon (Oncorhynchus kisutch) samples from station MINTERCR.							
15	**10240**	**1**	**N**	**HENDERSON BAY**	**390KRD**	**47122D6H3**	**47.375**	**122.635**		**Ammonia-N**	**Water**
				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station BML001 (Burley-Minter Lagoon) shows 0 excursions beyond the criterions out of 7 samples collected between 1993-2000							
15	**15730**	**1**	**Y**	**HENDERSON BAY**	**390KRD**	**47122D6H3**	**47.375**	**122.635**		**Fecal Coliform**	**Water**
				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station Station BML001 (Burley-Minter Lagoon) shows a geometric mean of 1 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 2 samples collected during 1995. Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station Station BML001 (Burley-Minter Lagoon) shows a geometric mean of 1 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 5 samples collected during 1996.					The 1998 303(d) listing appears to be in error, as the 1998 Decision Matrix indicates that the water is now meeting stadnards. Ecology ambient monitorining data confirms this.

				Kitsap County unpublished data at station HC17 (NEARSHORE BIG BEEF CR) show excursions beyond the criterion in measurements collected in 1996, 1997, 1998, 1999 and 2001.						This listing was reviewed by Department of Ecology Coastal and Estuarine Assessment Unit staff [see Grantham memo 4/2005, attachment (d)], who concluded that these exceedances are a natural condition and there are
insufficient										human influences in this area to produce significant temperature increases. Kitsap County Health Department (Kreis, 5/12/05) provides justification that historic temperature exceedances occur seasonally at this nearshore monitoring station at the mouth of a large, shallow embayment.

				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station HCB003 (Hood Canal - Eldon Hamma Hamma R.) shows 33 excursions beyond the criterions out of 71 samples collected between 1993-2000					This listing was reviewed by Department of Ecology Coastal and Estuarine Assessment Unit staff [see Grantham memo 4/2005, attachment (d)], who concluded that these exceedances are a natural condition and there are human influences in this area to produce significant temperature increases.

				Completed Phase I Federal Clean Lakes Restoration Project in 1977- Problems Encountered: Blue-green algae, low transparency, aquatic macrophytes, sediment phosphorus recycling, tributary nutrient inputs.					Completed Phase II Federal Clean Lakes Restoration in 1982: Welch, et al. 1988. Control measures implemented based on the Phase I study - phosphorus precipitation/inactivation, drawdown, aquatic macrophyte harvesting, public education. Welch and Cooke, 1995 = monitored effectiveness of control measures showed a 30 ug/l decrease in whole-lake total phosphorus 10 years after implementation.

15	**38749**	**1**	**N**	**PORT ORCHARD BAY**	**390KRD**	**47122G5B9**	**47.615**	**122.595**	**Dissolved oxygen**	**Water**
				Kitsap County unpublished data at station PO09 (NEARSHORE SCOTT'S CREEK SOUTH BOAT DOCK) show excursions beyond the criterion in measurements collected in 1996 and 1997.					Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. The measured excursions beyond the criterion are a natural condition per the 3 January 2003 submittal by Jim Zimny of Kitsap County.	
15	**38753**	**1**	**N**	**PORT ORCHARD BAY**	**390KRD**	**47122G5A9**	**47.605**	**122.595**	**Dissolved oxygen**	**Water**
				Kitsap County unpublished data at station PO10 (NEARSHORE ILLAHEE SP CREEK) show excursions beyond the criterion in measurements collected in 1996.					Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. The measured excursions beyond the criterion are a natural condition per the 3 January 2003 submittal by Jim Zimny of Kitsap County.

				Kitsap County unpublished data at station PS01 (MOUTH OF PUGET SOUND AT ADMIRALTY INLET) collected in 1996-1998.	show excursions beyond the criterion in measurements				Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. Albertson Memo, 2/11/05, BPJ, demonstrates that excursions beyond the criterion have naturally occurred since measurements were first recorded in 1933 and continue on through the present. -kk Kitsap County Health Department (Kreis, 5/12/05) provides justification that historic DO exceedances occur annually in the late fall at these monitoring stations due to the influx of lower DO ocean water into Puget Sound. No human contributions to these values can be anticipated at these two monitoring locations. The measured excursions beyond the criterion are a natural condition per the 3 January 2003 submittal by Jim Zimny of Kitsap County.

				Kitsap County unpublished data at station PS19 (NEARSHORE NORTH BLAKE ISLAND WEST OF MARINA) show excursions beyond the criterion in measurements collected in 1996, 1997, 1998, and 2001.						This listing was reviewed by Department of Ecology Coastal and Estuarine Assessment Unit staff [see Grantham memo 4/2005, attachment (d)], who concluded that these exceedances are a natural condition and there are
insufficient										human influences in this area to produce significant temperature increases. The measured excursions beyond the criterion are a natural condition per the 3 January 2003 submittal by Jim Zimny of Kitsap County.

15	**10275**	**1**	**N**	**PUGET SOUND (CENTRAL)**	**390KRD**	**47122I4H8**	**47.875**	**122.485**	**Dissolved oxygen**	**Water**
				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station ADM003 (Admiralty Inlet (south)) shows 24 excursions beyond the criterions out of 48 samples collected between 1993-2000					Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. These excursions beyond the criterion are a natural condition with no direct human-caused influence due to natural variations in the marine environment, based on the 11/03 judgment of Jan Newton (Dept. of Ecology).	
15	**42479**	**1**	**N**	**PUGET SOUND (CENTRAL)**	**390KRD**	**47122H4E2**	**47.745**	**122.425**	**Dissolved oxygen**	**Water**
				King County data (submitted by Kimberle Stark on 4/15/04) station KSBP01 (Point Jefferson) shows 67 excursions beyond the criterion from samples collected in 2002 and 2003.					Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. Albertson Memo, 12/16/05, BPJ, also demonstrates that excursions beyond the criterion have naturally occurred since measurements were first recorded in 1933 and continue on through the present. King County DNR 12/17/04 presents information and data demonstrating natural conditions.

				Kitsap County unpublished data at station YH01 (NEARSHORE HEAD OF YUKON HARBOR CURLEY CREEK MOUTH) show excursions beyond the criterion in measurements collected in 1996, 1997, 1998 and 2001.					This listing was reviewed by Department of Ecology Coastal and Estuarine Assessment Unit staff [see Grantham memo 4/2005, attachment (d)], who concluded that these exceedances are a natural condition and there are human influences in this area to produce significant temperature increases. The measured excursions beyond the criterion are a natural condition per the 3 January 2003 submittal by Jim Zimny of Kitsap County.

				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station ADM002 (Admiralty Inlet (north) - Quimper Pn.) shows 60 excursions beyond the criterions out of 78 samples collected between 1993-2000					Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. These excursions beyond the criterion are a natural condition with no direct human-caused influence due to natural variations in the marine environment, based on the 11/03 judgment of Jan Newton (Dept. of Ecology).

17	**10295**	**1**	**N**	**ADMIRALTY INLET (OUTER)**	**390KRD**	**48122B8I4**	**48.185**	**122.845**		**Temperature**	**Water**
				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station ADM002 (Admiralty Inlet (north) - Quimper Pn.) shows 1 excursions beyond the criterions out of 80 samples collected between 1993-2000						This listing was reviewed by Department of Ecology Coastal and Estuarine Assessment Unit staff [see Grantham memo 4/2005, attachment (d)], who concluded that these exceedances are a natural condition and there are insufficient human influences in this area to produce significant temperature increases.	
17	**10926**	**1**	**N**	**BIG QUILCENE RIVER**	**EL58TS**	**0.161**	**27N**	**02W**	**24**	**Ammonia-N**	**Water**
				Hallock (2001) Dept. of Ecology Ambient Monitoring Station 17A060 (BIG QUILCENE R NR MOUTH) shows 0 excursions beyond the criterion out of 2 samples collected between 1993 - 2001							
17	**10930**	**1**	**N**	**BIG QUILCENE RIVER**	**EL58TS**	**3.694**	**27N**	**02W**	**22**	**Ammonia-N**	**Water**
				Hallock (2001) Dept. of Ecology Ambient Monitoring Station 17A070 (Big Quilcene R nr Quilcene) shows 0 excursions beyond the criterion out of 9 samples collected between 1993 - 2001							
17	**10924**	**1**	**N**	**BIG QUILCENE RIVER**	**EL58TS**	**0.161**	**27N**	**02W**	**24**	**Dissolved oxygen**	**Water**
				Hallock (2001) Dept. of Ecology Ambient Monitoring Station 17A060 (BIG QUILCENE R NR MOUTH) shows 0 excursions beyond the criterion out of 12 samples collected between 1993 - 2001							
17	**10928**	**1**	**N**	**BIG QUILCENE RIVER**	**EL58TS**	**3.694**	**27N**	**02W**	**22**	**Dissolved oxygen**	**Water**
				Hallock (2001) Dept. of Ecology Ambient Monitoring Station 17A070 (Big Quilcene R nr Quilcene) shows 0 excursions beyond the criterion out of 12 samples collected between 1993 - 2001							
17	**10925**	**1**	**N**	**BIG QUILCENE RIVER**	**EL58TS**	**0.161**	**27N**	**02W**	**24**	**pH**	**Water**
				Hallock (2004), Dept. of Ecology ambient station 17A060 shows that of 1 sample none exceeded the criterion. Hallock (2001) Dept. of Ecology Ambient Monitoring Station 17A060 (BIG QUILCENE R NR MOUTH) shows 0 excursions beyond the criterion out of 12 samples collected between 1993 - 2001.							
17	**10929**	**1**	**N**	**BIG QUILCENE RIVER**	**EL58TS**	**3.694**	**27N**	**02W**	**22**	**pH**	**Water**
				Hallock (2001) Dept. of Ecology Ambient Monitoring Station 17A070 (Big Quilcene R nr Quilcene) shows 0 excursions beyond the criterion out of 12 samples collected between 1993 - 2001							
17	**21933**	**1**	**N**	**BIG QUILCENE RIVER**	**EL58TS**	**6.801**	**27N**	**02W**	**33**	**Temperature**	**Water**
				Labbe et al. 2002, shows no excursions beyond the criterion from instanatenous measurements collected in 2001 and 2002 at Falls View Campground. Labbe et al. 2002, shows no excursions beyond the criterion from the annual 7-day mean of daily maximum temperature from continuous measurements collected in 2001-2002 at Falls View Campground.
