17	**40354**	**1**	**Y**	**DABOB BAY AND QUILCENE BAY**	**390KRD**	**47122I8B5**	**47.815**	**122.855**		**Fecal Coliform**	**Water**
				Department of Health unpublished data collected from station QUILCENE BAY-116 show a geometric mean of 4 cfu/100mL and 3.33333333333333% of samples exceed the percentile criterion with the last sample collected on 11-Dec-2001. Department of Health unpublished data collected from station QUILCENE BAY-120 show a geometric mean of 4 cfu/100mL and 3.33333333333333% of samples exceed the percentile criterion with the last sample collected on 11-Dec-2001.						This listing was based on Department of Health Conditionally Approved Commercial Shellfish Area in Quilcene Bay based partially on data sampled station 19 that exceed the criterion (from the Annual Growing Area Review ending December 1996). More recent continuous monitoring data shows that fecal coliform standards are being met.	
17	**40355**	**1**	**N**	**DABOB BAY AND QUILCENE BAY**	**390KRD**	**47122I8A4**	**47.805**	**122.845**		**Fecal Coliform**	**Water**
				Department of Health unpublished data collected from station QUILCENE BAY-117 show a geometric mean of 4 cfu/100mL and 10% of samples exceed the percentile criterion with the last sample collected on 11-Dec-2001.							
17	**40356**	**1**	**N**	**DABOB BAY AND QUILCENE BAY**	**390KRD**	**47122H8I5**	**47.785**	**122.855**		**Fecal Coliform**	**Water**
				Department of Health unpublished data collected from station QUILCENE BAY-118 show a geometric mean of 5 cfu/100mL and 3.33333333333333% of samples exceed the percentile criterion with the last sample collected on 11-Dec-2001.							
17	**40357**	**1**	**N**	**DABOB BAY AND QUILCENE BAY**	**390KRD**	**47122H8G6**	**47.765**	**122.865**		**Fecal Coliform**	**Water**
				Department of Health unpublished data collected from station QUILCENE BAY-119 show a geometric mean of 3 cfu/100mL and 0% of samples exceed the percentile criterion with the last sample collected on 11-Dec-2001.							
17	**40359**	**1**	**N**	**DABOB BAY AND QUILCENE BAY**	**390KRD**	**47122H8G5**	**47.765**	**122.855**		**Fecal Coliform**	**Water**
				Department of Health unpublished data collected from station QUILCENE BAY-123 show a geometric mean of 3 cfu/100mL and 0% of samples exceed the percentile criterion with the last sample collected on 11-Dec-2001.							
17	**11507**	**1**	**N**	**DEADFALL CREEK**	**VV86TQ**	**0**	**28N**	**02W**	**30**	**Dissolved oxygen**	**Water**
				Department of Ecology unpublished data from EMAP station WA856S (Deadfall Creek) shows no excursions beyond the criterion from measurements made in 1994.							
17	**11508**	**1**	**N**	**DEADFALL CREEK**	**VV86TQ**	**0**	**28N**	**02W**	**30**	**pH**	**Water**
				Department of Ecology unpublished data from EMAP station WA856S (Deadfall Creek) shows no excursions beyond the criterion from measurements made in 1994.							
17	**11509**	**1**	**N**	**DEADFALL CREEK**	**VV86TQ**	**0**	**28N**	**02W**	**30**	**Temperature**	**Water**
				Department of Ecology unpublished data from EMAP station WA856S (Deadfall Creek) shows no excursions beyond the criterion from measurements made in 1994.

				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station PTH005 (Port Townsend Harbor - Walan Point) shows 25 excursions beyond the criterions out of 95 samples collected between 1993-2000					Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. These excursions beyond the criterion are a natural condition with no direct human-caused influence due to natural variations in the marine environment, based on the 11/03 judgment of Jan Newton (Dept. of Ecology).

				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station DUN001 (Dungeness Bay) shows 8 excursions beyond the criterions out of 11 samples collected between 1993-2000					Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. These excursions beyond the criterion are a natural with no direct human-caused influence due to natural variations in the marine environment, based on the 11/03 judgment of Jan Newton (Dept. of Ecology).

Hallock (2004), Dept. of Ecology ambient station 18A050 meets tested standards for fecal coliform.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 18A050 (DUNGENESS NEAR MOUTH) shows a geometric mean of 25 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 9 samples collected during 2001.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 18A050 (DUNGENESS NEAR MOUTH) shows a geometric mean of 10 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 3 samples collected during 2000.

Jamestown S'Klallam Tribe unpublished data from station Dung 0.30 shows a geometric mean of 14 from 4 samples collected in 2002.

Jamestown S'Klallam Tribe unpublished data from station Dung 0.30 shows a geometric mean of 11 from 2 samples collected in 2001.

Jamestown S'Klallam Tribe unpublished data from station Dung 0.30 shows a geometric mean of 7 from 4 samples collected in 2001.

Jamestown S'Klallam Tribe unpublished data from station DUNG 0.80 shows a geometric mean of 7 from 4 samples collected in 2002.

Jamestown S'Klallam Tribe unpublished data from station DUNG 0.80 shows a geometric mean of 7 from 4 samples collected in 2001.

Jamestown S'Klallam Tribe unpublished data from station DUNG 0.80 shows a geometric mean of 12 from 2 samples collected in 2000.

Sargeant (2002) station DR0.1 (Dungeness River (DR0.1)) shows the geometric mean of 13 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 14 samples collected during 2000.

Sargeant (2002) station DR0.1 (Dungeness River (DR0.1)) shows the geometric mean of 12 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 3 samples collected during 1999.

Sargeant (2002) station DR0.3 (Dungeness River (DR0.3)) shows the geometric mean of 25 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 29 samples collected during 2000.

Sargeant (2002) station DR0.3 (Dungeness River (DR0.3)) shows the geometric mean of 5 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 3 samples collected during 1999.

Sargeant (2002) station DR0.8LB (Dungeness River (DR0.8LB)) shows the geometric mean of 18 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 16 samples collected during 2000.

Sargeant (2002) station DR0.8LB (Dungeness River (DR0.8LB)) shows the geometric mean of 5 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 4 samples collected during 1999.

Sargeant (2002) station DR0.8RB (Dungeness River (DR0.8RB)) shows the geometric mean of 20 does not exceed the criterion and that 7% of the samples does not exceed the percentile criterion from 14 samples collected during 2000.

Sargeant (2002) station DR0.8RB (Dungeness River (DR0.8RB)) shows the geometric mean of 5 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 4 samples collected during 1999.

Sargeant (2002) station DR3.2LB (Dungeness River (DR3.2LB)) shows the geometric mean of 3 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 14 samples collected during 2000.

Hallock (2004), Dept. of Ecology ambient station 18A070 meets tested standards for fecal coliform.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 18A070 (Dungeness R. near Sequim) shows a geometric mean of 4 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 8 samples collected during 2001.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 18A070 (Dungeness R. near Sequim) shows a geometric mean of 3 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 14 samples collected during 2000.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 18A070 (Dungeness R. near Sequim) shows a geometric mean of 3 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 14 samples collected during 1999.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 18A070 (Dungeness R. near Sequim) shows a geometric mean of 5 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 4 samples collected during 1998.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 18A070 (Dungeness R. near Sequim) shows a geometric mean of 3 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 7 samples collected during 1994.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 18A070 (Dungeness R. near Sequim) shows a geometric mean of 1 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 3 samples collected during 1993.

				Newton et al. (1998) Dept. of Ecology Ambient Monitoring Station SJF002 (JEMS - S. of Cattle Pt. - South) shows 13 excursions beyond the criterions out of 13 samples collected between 1993-2000						Staff from Ecology Marine Unit (see Grantham Memo, 4/2005) reviewed this listing and determined that the location is subject to incursions of upwelled, low D.O. waters, with no evidence of anthropogenic sources. It is therefore due to natural conditions. These excursions beyond the criterion are a natural with no direct human-caused influence due to natural variations in the marine environment, based on the 11/03 judgment of Jan Newton (Dept. of Ecology).

Port Blakely Tree Farms unpublished data from station M6 (submitted by Blake Murden on 10 Decemeber 2002) shows a 7-day mean of daily maximum values of 14.37 degrees C from continuous measurements collected in 2001. Port Blakely Tree Farms unpublished data from station M6 (submitted by Blake Murden on 10 Decemeber 2002) shows a 7-day mean of daily maximum values of 15 degrees C from continuous measurements collected in 2000. Port Blakely Tree Farms unpublished data from station M6 (submitted by Blake Murden on 10 Decemeber 2002) shows a 7-day mean of daily maximum values of 14.2 degrees C from continuous measurements collected in 1999. Port Blakely Tree Farms unpublished data from station M6 (submitted by Blake Murden on 10 Decemeber 2002) shows a 7-day mean of daily maximum values of 16.4 degrees C from continuous measurements collected in 1998. Port Blakely Tree Farms unpublished data from station M6 (submitted by Blake Murden on 10 Decemeber 2002) shows a 7-day mean of daily maximum values of 16.3 degrees C from continuous measurements collected in 1996.

Port Blakely Tree Farms unpublished data from station M7 (submitted by Blake Murden on 10 Decemeber 2002) shows a 7-day mean of daily maximum values of 14.37 degrees C from continuous measurements collected in 2002. Port Blakely Tree Farms unpublished data from station M7 (submitted by Blake Murden on 10 Decemeber 2002) shows a 7-day mean of daily maximum values of 13.89 degrees C from continuous measurements collected in 2001. Port Blakely Tree Farms unpublished data from station M7 (submitted by Blake Murden on 10 Decemeber 2002) shows a 7-day mean of daily maximum values of 14.3 degrees C from continuous measurements collected in 2000. Port Blakely Tree Farms unpublished data from station M7 (submitted by Blake Murden on 10 Decemeber 2002) shows a 7-day mean of daily maximum values of 13.8 degrees C from continuous measurements collected in 1999. Port Blakely Tree Farms unpublished data from station M7 (submitted by Blake Murden on 10 Decemeber 2002) shows a 7-day mean of daily maximum values of 16 degrees C from continuous measurements collected in 1998. Port Blakely Tree Farms unpublished data from station M7 (submitted by Blake Murden on 10 Decemeber 2002) shows a 7-day mean of daily maximum values of 15.1 degrees C from continuous measurements collected in 1997. Port Blakely Tree Farms unpublished data from station M7 (submitted by Blake Murden on 10 Decemeber 2002) shows a 7-day mean of daily maximum values of 15.9 degrees C from continuous measurements collected in 1996.

Port Blakely Tree Farms unpublished data from station M6 (submitted by Blake Murden on 10 Decemeber 2002) shows no excursions beyond the criterion from measurements collected in 2001-2002.

Port Blakely Tree Farms unpublished data from station M7 (submitted by Blake Murden on 10 Decemeber 2002) shows no excursions beyond the criterion from measurements collected in 2001-2002.

				Department of Ecology unpublished data from the Willapa TMDL Study shows a 7-day mean of daily maximum values of 15.3 for the week ending 14 August 2001 at station 5 (Stringer Creek at Highland). Department of Ecology unpublished data from the Willapa TMDL Study shows 0 excursions beyond the criterion during 2001						Per Anita Stohr, a data problem in EIM resulted in data being switched for the Stringer Creek station and the Oxbow Road station. Changed from Category 2 to Category 1 as a result. 06/09/04, -kk.

				Johnson, 2000. show no samples exceeded the NAS criterion from samples collected at station10 (Tarlatt Slough) in June and August 2000.						Since EPA placed waters on the 1998 list based on the National Academy of Sciences recommended criterion, this current assessment is based on that criterion of 0.06 ug/L for marine water (even though it has not been adopted as a state water quality standard).

				Department of Ecology unpublished data from the Willapa TMDL Study shows a 7-day mean of daily maximum values of 20 for the week ending 12 July 2001 at station 27b (Ward Creek blw Fairchild Creek). Department of Ecology unpublished data from the Willapa TMDL Study shows 17 excursions beyond the criterion during 2001 Data from the Dept. of Ecology EIM database for the Project WRTMDL01 (WILLAPA RIVER TMDL FOR FECALS AND DISSOLVED OXYGEN) station WARD-1 (Ward Creek) shows 0 excursions beyond the criterion out of 6 samples collected between 04/98 - 12/98.					(Stohr, ECY/EAP, 11/14/03) The 20C rolling seven day reported occurred during a time when the continuous temperature monitor was out of the water. The monitor was out of the water during 7/1-7/30 and thus was capturing air temperature. This was noted at the top of the data spreadsheet, but because this project is a work in progress it had not been deleted from the files yet. This segment should not be listed as impaired.

				Johnson, 2000. show no samples exceeded the NAS criterion from samples collected by the Shoalwater Bay Tribe at station21 (National Wildlife Refuge Boat Launch) in July and August 2000.						Since EPA placed waters on the 1998 list based on the National Academy of Sciences recommended criterion, this current assessment is based on that criterion of 0.06 ug/L for marine water (even though it has not been adopted as a water quality standard).

				Department of Ecology unpublished data from EMAP station WA831S (EF Grays River) shows no excursions beyond the criterion from measurements made in 1994.							
25	**8255**	**1**	**N**	**GRAYS RIVER, E.F.**	**DI62FW**	**4.796**	**11N**	**06W**	**15**	**Temperature**	**Water**
				Department of Ecology unpublished data from EMAP station WA831S (EF Grays River) shows no excursions beyond the criterion from measurements made in 1994.							
25	**34966**	**1**	**N**	**HARMONY (MOSQUITO) CREEK**	**YZ01AM**	**0**	**08N**	**03W**	**10**	**Temperature**	**Water**
				Cowlitz Conservation District unpublished data (submitted by Kali Robson 28 January 2003) show a 7-day mean of maximum daily temperature of 17 degrees C, with a maximum daily temperature of 17.8 degrees C from continuous measurements collected in 2002 at Harmony Creek.							
25	**34972**	**1**	**N**	**HENDRICKSON CREEK**	**OW62GV**	**0**	**10N**	**08W**	**09**	**Temperature**	**Water**
				Cowlitz Conservation District unpublished data (submitted by Kali Robson 28 January 2003) show a 7-day mean of maximum daily temperature of 15.3 degrees C, with a maximum daily temperature of 15.9 degrees C from continuous measurements collected in 2002 at Hendrickson Creek.							
25	**8758**	**1**	**Y**	**LONGVIEW DITCHES**	**FQ06HT**	**3.094**	**07N**	**02W**	**05**	**Lead**	**Water**
				Golding (2003) shows no excursions beyond the chronic criterion from two dissolved lead samples collected in 2002. City of Longview unpublished data show no excursions beyond the chronic criterion out of 9 samples collected in 2002. Weyerhaeuser, 1990, multiple excursions beyond the criterion at 4 stations on the segment in 9/89, 2/90, and 3/90.						Verification monitoirng data (Golding, 2002) indicate that this water is meeting standards for lead. As a note, data from City of Longview and Weyerhaeuser samples in 1989 and 1990 were analyzed as 'total recoverable' and cannot be used to assess compliance with Washington's water quality standards that specify the criterion applies to the 'dissolved' fraction only.	
25	**8251**	**1**	**N**	**SISSION CREEK**	**RB91GP**	**4.011**	**26N**	**02W**	**18**	**Dissolved oxygen**	**Water**
				Department of Ecology unpublished data from EMAP station WWAP99-0520 (ROCKY BROOK) shows no excursions beyond the criterion from measurements made in 2000.

				Unpublished data from EIM Project AJOH0029 shows no excursions beyond the chronic criterion from 12 samples collected in 2001-2002 at station 26B070 (Cowlitz R. at Kelso) 0 excursions beyond the chronic criterion out of 3 samples at Ecology ambient monitoring station 26B070 (RM 4.9) between 9/91 and 9/96. Hallock (2001) Dept. of Ecology Ambient Monitoring Station 26B070 (COWLITZ RIVER AT KELSO) shows 1 excursions beyond the criterion out of 1 samples collected between 1993 - 2001						Recent monitoirng data (Golding, 2002) indicate that this water is meeting standards for chronic arsenic criteria. The measured data represent total arsenic and thus cannot be used to apply to National Toxic Rule criterion which applys only to inorganic arsenic.

				Completed Phase I State Clean Lakes Restoration Project in 1990 - Problems Encountered: Aquatic macrophytes, tributary nutrient inputs.; Moore, 1990. Sumioka and Dion (1985) show a summer epilimnetic total phosphorus concentration of 24 ug/L derived from the reported Carlson's Trophic State Index value which exceeds the water quality standards nutrient criterion for the Puget Lowlands Ecoregion.						Active Phase II State Clean Lakes Restoration Project: Control measures underway based on the Phase I study -biological control (triploid grass carp), development of a watershed nutrient management plan, public education. Implementation of control measures will be required toe completed by June 1998 under the conditions of the grant. Monitoring completed as a result of the project will be completed in 1997. Results show an increase in turbidity due to reduced plant cover. All submerged plants and watershed plants have been removed by grass carp. Only duckbean and water lily remain. The above information meets EPA guidance for excluding lake from the list under federal regulation 40 CFR130.7(b)(1)(iii).

				Kendra, 1988, 2 excursions beyond the chronic criteria at RM 119.7 (BNRR Bridge) on 9/29/87 and 9/30/87.						This segment was removed from the list in 1998 because the NPDES permit issued in 1996 for the City of Palouse contains water quality-based effluent limitations for ammonia. These are based on a analysis of the North Fork Palouse River shown in the permit fact sheet. The permit requires monitoring of the waste stream to help ensure compliance with the limits. The above information meets EPA guidance for excluding the segment from the list under federal regulation 40 CFR 130.7(b)(1)(iii).

				Pelletier, 1993. station SF9 (S.F. PALOUSE SAMPLING SITE #9) shows that 0 of 3 samples exceeded the percentile criterion in 1991.						This waterbody segment was incorrectly assessed and does not meet listing criteria for bacteria in WQ Policy 1-11, which indicates that a geometric mean cannot be computed with
less										than 5 samples. Data for this waterbody segment does not any exceedances of the percentile criterion and is therefore placed in category 1.

34	**8823**	**1**	**N**	**SILVER CREEK**	**VW12BW**	**5.03**	**17N**	**45E** 05	**Ammonia-N**	**Water**
				Determan, 1987, 2 excursions beyond the criterion at 4.4 on 10/7/86 and 10/8/86.						The NPDES permit issued in 1995 for the Town of Garfield contains water quality-based effluent limitations for chlorine. These are based on a analysis of Silver Creek shown in the permit fact sheet. The permit requires monitoring of the waste stream to help ensure compliance with the limits. The above information meets EPA guidance for excluding the segment from the list under federal regulation 40 CFR 130.7(b)(1)(iii). (taken from 1998 list database)
34	**8824**	**1**	**N**	**SILVER CREEK**	**VW12BW**	**5.03**	**17N**	**45E** 05	**Chlorine**	**Water**
				Determan, 1987, 2 excursions beyond the criterion at RM 45., 4.4 and 3.9 on 10/7/86 and 10/8/86.						This segement was taken off the list for 1998 because the NPDES permit issued in 1995 for the Town of Garfield contains water quality-based effluent limitations for chlorine. These are based on a analysis of Silver Creek shown in the permit fact sheet. The permit requires monitoring of the waste stream to help ensure compliance with the limits. The above information meets EPA guidance for excluding the segment from the list under federal regulation 40 CFR 130.7(b)(1)(iii).

Hallock (2004), Dept. of Ecology ambient station 36A070 meets tested standards for fecal coliform.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 36A070 (Columbia R. near Vernita) shows a geometric mean of 1 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 2 samples collected during 2001.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 36A070 (Columbia R. near Vernita) shows a geometric mean of 1 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 7 samples collected during 2000.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 36A070 (Columbia R. near Vernita) shows a geometric mean of 2 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 7 samples collected during 1999.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 36A070 (Columbia R. near Vernita) shows a geometric mean of 2 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 11 samples collected during 1998.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 36A070 (Columbia R. near Vernita) shows a geometric mean of 2 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 8 samples collected during 1997.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 36A070 (Columbia R. near Vernita) shows a geometric mean of 3 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 3 samples collected during 1996.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 36A070 (Columbia R. near Vernita) shows a geometric mean of 2 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 7 samples collected during 1995.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 36A070 (Columbia R. near Vernita) shows a geometric mean of 3 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 5 samples collected during 1994.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 36A070 (Columbia R. near Vernita) shows a geometric mean of 1 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 2 samples collected during 1993.

				Davis, et al. 1998, show no excursions beyond the National Toxics Rule criterion out of 4 samples collected at station YAKRAER (DEPTH 5 FT) in 1995.							
37	**8859**	**1**	**N**	**YAKIMA RIVER**	**EB21AR**	**7.492**	**09N**	**28E**	**15**	**Ammonia-N**	**Water**
				Mellor, 1981b. , excursions beyond the criterion shown between 1970 and 1974.						Based on the data cited and other studies, the Richland wastewater discharge was diverted to the Columbia River in 1985. A TMDL was submitted to EPA based on the diversion on 8/25/92. EPA determined that the TMDL was incomplete on 4/8/93. A memo from EPA dated 3/11/97 stated the segment should never have been listed or considered as a TMDL. Ecology withdrew the TMDL from consideration on 4/29/97.; Data Collected from Ecology ambient monitoring station 37A090 (just upstream of original discharge location) show that Ammonia criteria are being met. Since there are no major sources of ammonia downstream of this station, it is likely that ammonia criteria are me for the entire reach downstream. The activity meets EPA guidance for excluding water under federal regulations 40 CFR 130.7(b)(1).
37	**8884**	**1**	**N**	**YAKIMA RIVER**	**EB21AR**	**95.37**	**09N**	**23E**	**30**	**Ammonia-N**	**Water**
				Glenn, 1993. , potential for ammonia toxicity in the receiving water from the Mabton discharge. Hallock (2001) Dept. of Ecology Ambient Monitoring Station 37A130 (Yakima R @ Mabton) shows 0 excursions beyond the criterion out of 11 samples collected between 1993 - 2001						The NPDES permit WA0020648 for the Mabton STP has a compliance schedule for effluent limitations for ammonia to become effective December 31, 2000. Ammonia in the effluent will be reduced to meet standards at the end of pipe.

Hallock (2004), Dept. of Ecology ambient station 37A090 meets tested standards for fecal coliform.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 37A090 (Yakima R. at Kiona) shows a geometric mean of 8 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 9 samples collected during 2001.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 37A090 (Yakima R. at Kiona) shows a geometric mean of 22 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 12 samples collected during 2000.

Carroll and Joy (2002) station YAK-6 (YAKIMA R. (YAK-KION)) shows the geometric mean of 16.9 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 2 samples collected during 2000.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 37A090 (Yakima R. at Kiona) shows a geometric mean of 29 does not exceed the criterion and that 8% of the samples does not exceed the percentile criterion from 12 samples collected during 1999.

Carroll and Joy (2002) station YAK-6 (YAKIMA R. (YAK-KION)) shows the geometric mean of 55 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 1 samples collected during 1999.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 37A090 (Yakima R. at Kiona) shows a geometric mean of 31 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 13 samples collected during 1998.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 37A090 (Yakima R. at Kiona) shows a geometric mean of 56 does not exceed the criterion and that 8% of the samples does not exceed the percentile criterion from 12 samples collected during 1997.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 37A090 (Yakima R. at Kiona) shows a geometric mean of 97 does not exceed the criterion and that 17% of the samples exceeds the percentile criterion from 6 samples collected during 1996.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 37A090 (Yakima R. at Kiona) shows a geometric mean of 110 does not exceed the criterion and that 55% of the samples exceeds the percentile criterion from 11 samples collected during 1995.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 37A090 (Yakima R. at Kiona) shows a geometric mean of 30 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 11 samples collected during 1994.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 37A090 (Yakima R. at Kiona) shows a geometric mean of 39 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 10 samples collected during 1993.

37	**11905**	**1**	**N**	**YAKIMA RIVER**	**EB21AR**	**48.64**	**09N**	**27E**	**19**	**Lead**	**Water**
				Johnson and Golding, 2002. show the chronic criterion was met in all 2 samples collected in 2001. Johnson (1994) station 37A090 (Yakima R. at Kiona) shows 0 excursions beyond the criterion out of 3 samples collected between 07/92 - 05/93.						
37	**8879**	**1**	**N**	**YAKIMA RIVER**	**EB21AR**	**48.64**	**09N**	**27E**	**19**	**Mercury**	**Tissue**
				Fuhrer, et al. 1996. , 6 muscle tissue samples out of 7 for Largescale sucker samples collected 10/91 at Kiona exceeded the National Toxic Rule criterion.; Hopkins et al. 1985. show no excursions beyond the National Toxic Rule criterion in a multiple fish composite of edible tissue of Bridgelip sucker and Northern squawfish samples collected in 1984.						The mercury data from Fuhrer, et al. 1996 are on a dry weight basis. If the concentrations are converted to wet weight (typicaly a factor of 5) the criterion is not exceeded (memorandum from Art Johnson to Steve Butkus and Will Kendra dated 4/24/98). USGS data from the 1987-1990 period are subject to contamination (Windom et al., 1991; Rickert, 1991).The results are inconsistent with Ecology data collected on these streams (Johnson, 1996; Johnson et al., 1986).
37	**8880**	**1**	**Y**	**YAKIMA RIVER**	**EB21AR**	**176.385**	**12N**	**19E**	**17**	**Mercury**	**Water**
				Johnson and Golding, 2002. show the chronic criterion was met in all 6 samples collected in 2001-2002. Fuhrer, et al. 1996. , 2 samples collected at station 32 (Yakima River above Ahtanum Creek at Union Gap) exceeded the criterion between 1987 and 1990.;						Verification monitoring data (Johnson and Golding, 2002) indicate that this water is meeting standards for mercury. USGS data from the 1987-1990 period were subject to contamination (Windom et al., 1991; Rickert, 1991).

WRIA	Listing ID	Category	98 List?	Waterbody Name	Location Information					Parameter	Medium
				Basis					Remarks		
39	**11829**	**1**	**N**	**SWAUK CREEK**	**EQ32WA**	**25.968**	**21N**	**17E**	**11**	**Dissolved oxygen**	**Water**
				Department of Ecology unpublished data from EMAP station WA083S (Swauk Creek) shows no excursions beyond the criterion from measurements made in 1995.							
39	**5785**	**1**	**N**	**SWAUK CREEK**	**EQ32WA**	**5.302**	**19N**	**17E**	**05**	**Instream Flow**	**Habitat**
				The hydrology available from USGS shows the flows were measured from 1909 to 1914. The Creek went dry in 1914 in August and September, but was 0.5 cfs in 1910 an 1911 in those same months. Miscellaneous measurements by USGS in those same months in 1967,1970, 1973, 1977, and 1981 showed flows from 0.39 to 2.55 cfs. This meets listing criteria for hydrology information. The commentor also said the creek was dry in those same months on multiple occasions since 1988, but no dates were provided. Spring Chinook and summer steelhead stocks in the Yakima are listed as depressed (SASSI, 1993). The Coho stock has become extinct. Instream flow levels appear to be inadequate since summer/fall flows seem to often be between 0.5 to 0.0 cfs. In Appendix 1 of the Yakima Subbasin Plan (1990), the Summary of Aquatic Habitat says, 'The only active diversion on the creek, the Burke diversion at RM 7.0, is relatively small, and does not appear to impact downstream flows significantly.' 'At the present time, naturally occurring low flows throughout the system and the absence of flow in the lower three to five miles in the fall limit steelhead production rather severely, and totally preclude Coho production.'					The information provided does not meet the criteria to show human caused alteration of the environment, since the Subbasin Report written by the Yakama Tribe as the lead assistance by the Departments of Fisheries and Wildlife says the only diversion on the creek does not appear to impact downstream flows and that the low or no flow in the lower section of the creek is a naturally occurring event.

				Numerous excursions beyond the criterion at the mouth sampled by Wenatchee National Forest in 1994 (submitted by Bella Patheal of EPA on 12/1/95).						This listing is located in the Alpine Lakes Wilderness area just north of the Wenatchee National Forest. Designated wilderness areas do not allow human activities, therefore the increaed temperatures are considered naturally occuring and not caused by anthropogenic sources either at the location or upstream. sb 3/28/05

Hallock (2004), Dept. of Ecology ambient station 45A110 meets tested standards for fecal coliform.

Ecology unpublished data, (Ecology EIM study WENRTMDL), station 45A110 shows that a total of 3 samples were collected in year 2002 and none were found to exceed the criterion.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 45A110 (Wenatchee R. near Leavenworth) shows a geometric mean of 3 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 3 samples collected during 2001.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 45A110 (Wenatchee R. near Leavenworth) shows a geometric mean of 2 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 8 samples collected during 2000.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 45A110 (Wenatchee R. near Leavenworth) shows a geometric mean of 5 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 5 samples collected during 1999.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 45A110 (Wenatchee R. near Leavenworth) shows a geometric mean of 2 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 5 samples collected during 1998.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 45A110 (Wenatchee R. near Leavenworth) shows a geometric mean of 4 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 7 samples collected during 1997.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 45A110 (Wenatchee R. near Leavenworth) shows a geometric mean of 5 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 5 samples collected during 1996.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 45A110 (Wenatchee R. near Leavenworth) shows a geometric mean of 3 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 7 samples collected during 1995.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 45A110 (Wenatchee R. near Leavenworth) shows a geometric mean of 1 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 4 samples collected during 1994.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 45A110 (Wenatchee R. near Leavenworth) shows a geometric mean of 2 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 6 samples collected during 1993.

Hallock (2004), Dept. of Ecology ambient station 46A070 meets tested standards for fecal coliform.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 46A070 (Entiat R. near Entiat) shows a geometric mean of 4 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 6 samples collected during 2001.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 46A070 (Entiat R. near Entiat) shows a geometric mean of 7 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 11 samples collected during 2000.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 46A070 (Entiat R. near Entiat) shows a geometric mean of 3 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 12 samples collected during 1999.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 46A070 (Entiat R. near Entiat) shows a geometric mean of 3 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 10 samples collected during 1998.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 46A070 (Entiat R. near Entiat) shows a geometric mean of 3 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 10 samples collected during 1997.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 46A070 (Entiat R. near Entiat) shows a geometric mean of 4 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 6 samples collected during 1996.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 46A070 (Entiat R. near Entiat) shows a geometric mean of 8 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 11 samples collected during 1995.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 46A070 (Entiat R. near Entiat) shows a geometric mean of 10 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 11 samples collected during 1994.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 46A070 (Entiat R. near Entiat) shows a geometric mean of 2 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 2 samples collected during 1993.

46	**6210**	**1**	**N**	**ENTIAT RIVER**	**RX71CE**	**27.798**	**27N**	**19E**	**26**	**Instream Flow**	**Habitat**

Much information on hydrology and water rights is in the 1995 Entiat River Watershed Assessment (Report 95-02). The 1995 Ecology report titled 'Entiat and Mad Rivers Fish Habitat Analysis Using the Instream Flow Incremental Methodology' (Report 95-166) has hydrographs for the Entiat River RM 18. The upper IFIM site represented the upper river from RM 10 to 27.7. Detailed graphs showed the fish habitat versus instream flow relationship for both sites for Chinook, steelhead and bull trout. The SASSI (1993) report lists the spring Chinook and summer steelhead stocks in the Entiat River as depressed. Summer Steelhead have been listed as endangered in August 1997 under the Endangered Species Act. Instream flow levels were proposed by Ecology on July 22, 1994 based on the IFIM study and a review of the information in the1989 Entiat River Subbasin Plan and the 1980 Entiat Co-operative River Basin Study by the Soil Conservation Service. The Department of Fish and Wildlife agreed with the proposed Entiat River instream flow recommendations in a March 21, 1995 memo to Ecology. The upper IFIM site showed that instream flows are inadequate from August 1st to May 1st. However, there are no known of diversions upstream of the site and the low flows are natural rather than a human caused condition.

There are no known of diversions upstream of the IFIM site and the low flows are natural rather than a human-caused condition.

Hallock (2004), Dept. of Ecology ambient station 49A070 meets tested standards for fecal coliform.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 49A070 (Okanogan R. at Malott) shows a geometric mean of 25 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 6 samples collected during 2001.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 49A070 (Okanogan R. at Malott) shows a geometric mean of 8 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 11 samples collected during 2000.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 49A070 (Okanogan R. at Malott) shows a geometric mean of 11 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 12 samples collected during 1999.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 49A070 (Okanogan R. at Malott) shows a geometric mean of 26 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 11 samples collected during 1998.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 49A070 (Okanogan R. at Malott) shows a geometric mean of 17 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 11 samples collected during 1997.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 49A070 (Okanogan R. at Malott) shows a geometric mean of 19 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 6 samples collected during 1996.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 49A070 (Okanogan R. at Malott) shows a geometric mean of 20 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 10 samples collected during 1995.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 49A070 (Okanogan R. at Malott) shows a geometric mean of 15 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 12 samples collected during 1994.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 49A070 (Okanogan R. at Malott) shows a geometric mean of 20 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 10 samples collected during 1993.

Hallock (2004), Dept. of Ecology ambient station 49A190 meets tested standards for fecal coliform.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 49A190 (Okanogan R. at Oroville) shows a geometric mean of 9 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 6 samples collected during 2001.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 49A190 (Okanogan R. at Oroville) shows a geometric mean of 6 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 9 samples collected during 2000.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 49A190 (Okanogan R. at Oroville) shows a geometric mean of 3 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 12 samples collected during 1999.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 49A190 (Okanogan R. at Oroville) shows a geometric mean of 7 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 10 samples collected during 1998.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 49A190 (Okanogan R. at Oroville) shows a geometric mean of 2 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 11 samples collected during 1997.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 49A190 (Okanogan R. at Oroville) shows a geometric mean of 5 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 5 samples collected during 1996.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 49A190 (Okanogan R. at Oroville) shows a geometric mean of 4 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 10 samples collected during 1995.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 49A190 (Okanogan R. at Oroville) shows a geometric mean of 5 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 3 samples collected during 1994.

Hallock (2001) Dept. of Ecology Ambient Monitoring Station 49A190 (Okanogan R. at Oroville) shows a geometric mean of 4 does not exceed the criterion and that 0% of the samples does not exceed the percentile criterion from 5 samples collected during 1993.

				Basis		Remarks	
59	**8506**	**1**	**N**	**GILLETTE LAKE**	**325IJJ 36N 42E 20**	**Fecal Coliform**	**Water**
				2 excursions beyond the criterion sampled by Colville National Forest (data submitted by Curry Jones of EPA on 11/22/95) at station 21130105 (SWIM AREA) in 6/80 and 8/80. New data collected by Dept. of Ecology in 1997 show very low fecal coliform values well within the criteria (submitted by David Hallock on 11/13/97).	Murray, Dept. of Ecology, 2003 notes that the listing was based on old data from 1980 and that the lake met standards in 1997. Fecal coliform data were previously submitted only in hardcopy form. The water segment was listed as Category 5 based on the 1998 assessment.

				Colville National Forest data (submitted by Albertus Wasson on 16 December 2002) at the station named 'Tonata at F.B.' show 7 excursions beyond the criterion from 22 measurements collected in 4 excursions beyond the criterion out of 23 samples collected by Colville National Forest (data submitted by Curry Jones of EPA on 11/22/95) at station 21180202 on 4/22/91, 6/26/91, 6/28/94and 9/27/94.					High pH. Comments received by Jerry Coleman (Colville National Forest) on 5/29/97 state that the excursions are a natural condition due to the geology of the area (based on Clarkin, 1997). Jean Parodi and Mike Hepp (Dept. of - 7/97 judgment) concur with the comment since the station located in a area with marble geology which can have a significant effect on stream pH.

				Colville National Forest data (submitted by Albertus Wasson on 16 December 2002) at the station named 'E FK Crown' show a geometric mean of 5 cfu/100mL from 6 samples collected in 2002.						Changed from Category 2 to Category 1 on 01/24/05 due to consolidation with Listing ID 38165 (cat 1). -kk	
				Colville National Forest data (submitted by Albertus Wasson on 16 December 2002) at the station named 'E FK Crown' show a geometric mean of 9 cfu/100mL from 5 samples collected in 2001.						Information submitted is insufficient to determine a geometric mean and is not clear how many samples the values were based on, or what years the excursions occurred in. Therefore, this waterbody segment does not meet listing criteria for bacteria in WQ Policy 1-11, which requires that when the exceedances are based on a percentile critieron,	
				Colville National Forest data (submitted by Albertus Wasson on 16 December 2002) at the station named 'E FK Crown' show a geometric mean of 6 cfu/100mL from 10 samples collected in 2000.							
you											
				Colville National Forest data (submitted by Albertus Wasson on 16 December 2002) at the station named 'E FK Crown' show a geometric mean of 4 cfu/100mL from 12 samples collected in 1999.						must have a minimum of 10% and at least 2 samples exceeding the criteria. Data for this waterbody segment	
does											
				Colville National Forest data (submitted by Albertus Wasson on 16 December 2002) at the station named 'E FK Crown' show a geometric mean of 10 cfu/100mL from 6 samples collected in 1998.						not meet criteria for listing as impaired and is considered a water of concern until further monitoring verifies the status of the water.	
				Colville National Forest data (submitted by Albertus Wasson on 16 December 2002) at the station named 'E FK Crown' show a geometric mean of 23 cfu/100mL from 4 samples collected in 1995.							
				Colville National Forest data (submitted by Albertus Wasson on 16 December 2002) at the station named 'E FK Crown' show a geometric mean of 5 cfu/100mL from 23 samples collected in 1992.							
				4 excursions beyond the criterion sampled by Colville National Forest (data submitted by Curry Jones of EPA on 11/22/95) at station 21140213 in 1991 and 1992.

				Kalispel Tribe unpublished data at station LEC1 (Stream crossing of Leclerc Rd 9325) show the maximum 7-day mean of daily maximum values was 16.8 from continuous measurements collected in 2002. Kalispel Tribe of Indians unpublished data show no excursions beyond the criterion from instantaneous measurements collected in 2002 at station LEC1 (Stream crossing of Leclerc Rd 9325).						Le Clerc Creek is confirmed to be a Class A stream because it does not lie within the Colville National Forest and is tributary to the Pend Oreille River which is Class A. As a result the data for this segment has been reassessed and changed from Category 5 to Category 1. -kk

				2 excursions beyond National Toxics Rule (40 CFR Part 131) criterion at USEPA station 543012 (at Metaline Falls) in 1971.					Era-Miller, May 2005, Verification of 303(d) Listings for Fish Tissue in the Skagit and Pend Oreille Rivers. The data for the original listing are based on data collected by EPA between 1969 and 1971. The data came from the Legacy STORET database and never met Ecology's quality assurance/quality control standards. All of the contaminants are Legacy chemicals, banned in the early 1970's. The statewide trend for these chemicals is that they decrease overtime as they breakdown and are sequestered in the environment. Since fish tissue sampling showed no exceedances, this listing has been placed in Category 1. 5/13/05 -kk The EPA data downloaded from STORET were challenged as not meeting the quality assurance criteria of the Water Quality Program policy on listing. The listed STORET contact (Ray Peterson) was asked to verify that these criteria were met for the data used as a basis for listing. EPA did not verify that these data meet the quality assurance criteria. Therefore, these data from STORET should not be used as a basis for listing (from 1998 list database).

				2 excursions beyond National Toxics Rule (40 CFR Part 131) criterion at USEPA station 543012 (at Metaline Falls) in 1971.							Era-Miller, May 2005, Verification of 303(d) Listings for Fish Tissue in the Skagit and Pend Oreille Rivers. The data for the original listing are based on data collected by EPA between 1969 and 1971. The data came from the Legacy STORET database and never met Ecology's quality assurance/quality control standards. All of the contaminants are Legacy chemicals, banned in the early 1970's. The statewide trend for these chemicals is that they decrease overtime as they breakdown and are sequestered in the environment. Since fish tissue sampling showed no exceedances, this listing has been placed in Category 1. 5/13/05 -kk The EPA data downloaded from STORET were challenged as not meeting the quality assurance criteria of the Water Quality Program policy on listing. The listed STORET contact (Ray Peterson) was asked to verify that these criteria were met for the data used as a basis for listing. EPA did not verify that these data meet the quality assurance criteria. Therefore, these data from STORET should not be used as a basis for listing (from 1998 list database).
