Dear WDOE:

Please click on this link to my report on industrial storm water run-off at All Wood Recycling (AWR) of SE Redmond, WA. This storm water and sewer pollution has been ongoing and the City is undergoing a retroactive permitting process to correct actions taken by AWR.

This industrial site stormwater pollution was first reported by me in 2006. WDOE and other regulatory agencies visited the site, but nothing has been done until now - and actions are only now being attempted. What is wrong with our regulatory process?

AWR has proposed in their SEPA checklist only one vault and one stormwater pond. The site encompasses both sides of Evans Creek, a class I stream with wild, endangered Chinook salmon runs (?).

THIS INDUSTRIAL SITE SITS OVER A CITY AQUIFER - SIX FEET UNDER IN SOME PLACES.

I can't make the town meeting. But, please review this link to my blog story.

Thank you,  
Bob Yoder
