Copper Summary for Washington

[National Contaminant Summary](#)

Copper is a contaminant that enters water by corrosion of household plumbing systems; erosion of natural deposits. Potential health impacts associated with Copper include cardiovascular or blood toxicity, developmental toxicity, gastrointestinal or liver toxicity, kidney toxicity, reproductive toxicity, and respiratory toxicity. [\[read more\]](#)

Sources of Copper:

Sprawl and Urban Areas (road runoff, lawn pesticides, human waste)

Naturally Occurring (naturally present but increased for lands denuded by sprawl, agriculture, or industrial development)

An Environmental Working Group analysis shows that **3.3 million people** from **1,373 Washington communities** drank tap water containing Copper between 1998 and 2002. 661 thousand of these people from 237 Washington communities were exposed at levels exceeding health based recommendations for Copper.

Exposure Summary

Fact: The federal government has set standards for 70 chemical pollutants in tap water, balancing health concerns and treatment costs. For fifty pollutants the legal limit is higher than health-based levels [see more].

3,348,635

People drinking water contaminated with Copper in Washington

1,373

Communities served water contaminated with Copper in Washington

660,996

People drinking water contaminated with Copper over health based limits in Washington

237

Communities served water with Copper above health based limits in Washington

Table. The most polluted communities in Washington

661,000 Americans in 237 Washington communities were served tap water contaminated with Copper above health based limits between 1998 and 2003

Ranked by highest average Copper level

Over 237 communities in Washington State's drinking water are above health based limits with copper. The **BEST** of the **WORST** is 170 ppb and the **BAD** of the **WORST** is 1718 ppb. You expect a business in Washington to be less than 20 ppb on their run off water. What is wrong with this picture? I should start a new business, to bottle the run off water and sell it to those 237 communities. The name of the water could be (**SAFER THEN YOUR WATER**).

Somewhere on the label I should put (almost copper free!)

Health Summary

Table. Health based limits for Copper

Standard	Value	Systems Over	Population Over
	Description		
California Public Health Goals	170 ppb (avg)	237	661 thousand
	Defined by the State of California Office of Environmental Health Hazard Assessment (OEHHA) as the level of contaminant that is allowed in drinking water. For acutely toxic substances, levels are set at which scientific evidence indicates that no known or anticipated adverse effects on health will occur, plus an adequate margin-of safety. PHGs for carcinogens or other substances which can cause chronic disease shall be based solely on health effects without regard to cost impacts and shall be set at levels which OEHHA has determined do not pose any significant risk to health.		
	1300 ppb (avg)	4	3,386

EPA Human Health Water Quality Criteria	Water quality criteria set by the US EPA provide guidance for states and tribes authorized to establish water quality standards under the Clean Water Act (CWA) to protect human health. These are non-enforceable standards based upon exposure by both drinking water and the contribution of water contamination to other consumed foods. Source: U.S. Environmental Protection Agency.		
Maximum Contaminant Limit Goal (MCLG) (MCLG)	1300 ppb (avg)	4	3,386
	A non-enforceable health goal that is set at a level at which no known or anticipated adverse effect on the health of persons occurs and which allows an adequate margin of safety. Source: U.S. Environmental Protection Agency.		
National Secondary Drinking Water Regulations	1000 ppb ()	5	3,516
	A National Secondary Drinking Water Regulation is a non-enforceable guideline regarding contaminants that may cause cosmetic effects (such as taste, odor, or color). Some states choose to adopt them as enforceable standards. Source: U.S. Environmental Protection Agency.		

Violation Summary

Notice: No violation data is currently available for this contaminant in this state.
