Subject: The following are comments to be submitted to the D
Date: Friday, October 02, 2015 9:30:33 AM

The following are comments to be submitted to the Department of ecology.

1. This first draft does not have credible research. This is a very poor economic outlook and a mandatory permit does not work for all Dairyman in the state. It appears to be an attempt by the Washington State Department of ecology to overreach and grab for more environmental control.
2. Industry researchers need to be approached on the subject matter with fair consideration. credible research and science already exists and is being implemented by dairies.
3. This very divisive plan will restrict the sale of my property and reduce my property values. It will cause some Dairyman to go out of business. This would result in economic hardship to dairy farms as well as our processor Darigold. (A Dairyman owned co-op). Ultimately a negative impact to Dairyman after investments made in infrastructure to process milk.
4. And lastly this would cause our farm to hire one full-time equivalent in order to manage the permit and all of its paperwork.
