Subject: Dissolved oxygen plan Discharge permits

Mr. Knight:

Thought on Lake Spokane clean up.

The article in the Spokesman Review on Sept 14,2007, telling us of the planned clean up sound like a Band Aid is being used.

A Band Aid is only meant to cover the wound--not heal it.

Keep an eye on the wound (River) and what is causing it not to heal. Examine the wound (River) often and if not healing take further steps immediately. Please DO NOT wait ten years before assessing the results of the Band Aid. Check up at least every year on the Primary Dischargers and Polluters.

Waiting twenty years to have all these requirements in place is and will be a disaster.

They

They

have already been given sufficient time to get started. Yes, it will be costly to the Polluters, but won't it be more costly if the health of our of the community continues to be in jeopardy.

No more extensions of time. Get started NOW!!

Please give us favorable reports every year of the progress that is being made on the Lake Spokane River Cleanup.

Thank you.

Donna A. Winkler
