Subject: Act to Stop Spraying Pesticides in State Marine Waters

Dear Ms. Shoblom and Misters Jennings, Knight and Korton:

Please consider that the use of some pesticides can have negative affects on other animal and plant life that were not considered when the pesticide was used. DTD is a prime example of this. The use of Imazamox and Imidicloprid are powerful pesticides that will affect other plants and animals other than the shellfish it is supposed to help. The negative far out-weighs the positives for these two pesticides.

Please do not allow their usage in our waters.

Sincerely

Rich Roloff
Woodinville, WA
