**Subject:** IMAZAMOX

Dear Kathy,

I am writing to oppose the use of Imazamox in our Puget Sound waters. After reading the literature it reminds me of taking prescription medicine....it kills it's target but the side effects can be worse than it's intended purpose.

Sure, it kills zosteria japonica, but also kills the native eelgrass which is needed by fish and birds. There are many other concerns but this one hit me between the eyes. Seriously, I believe this corporate farm thinking of clearing, killing and poisoning for planting is out of date, out of touch and unsustainable.

Thank you.

Gail Sheikhzadeh  
Eld Inlet resident
