RE: Mosquito Spraying on Moses Lake

To Whom it May Concern

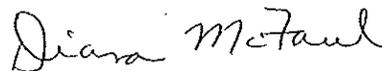

We read in the Feb. 25, 2010 Columbia Basin Herald that you are trying to stop the Mosquito District from spraying the mosquito larvae as they have in the past. With a stagnant body of water such as Moses Lake, and all of the pools that would be excellent for raising mosquito larvae, that is a serious threat to our health and comfort. They started spraying to kill these larvae years ago for comfort reasons; with the newer and more virulent diseases now being spread by mosquitos it is even more important that we continue to spray.

Please leave the district alone; let them to continue to spray as they think best. We need to kill those larvae before they start spreading disease, weakening our already strained health care system

Sincerely yours,

Gerry McFaul
