To whom it may concern:

I respectfully disagree with the proposal to stop the spraying of mosquitoes in my area and other areas alike. If mosquito control stopped spraying in Wallula it would bring havoc among the people that enjoy the outdoors. Even with regular spraying intervals, Wallula is still constantly attacked by mosquitoes. Wallula has many features that are perfect for breeding mosquitoes; there is a river that runs next to the town, and also a stagnant pond that is full all summer long. Having an excessive amount of mosquitoes would prevent people from enjoying recreational past times and it would also bring disease and virus to both humans and animals. Mosquitoes are not only pests they are also a health hazard. Mosquitoes carry a deadly disease called the West Nile Virus. It is ridiculous to not prevent something bad before it happens. Not many sane people would consider the stop of mosquito control in populated areas. Thank you for reading.

Respectfully submitted,

Angel Luna
