To whom it may concern,

In my opinion the mosquito population should be controlled, for the sake of people's health. Mosquitoes carry diseases such as The West Nile Virus, so the more mosquitoes there are more chances of people acquiring these viruses, so there will be less outdoor activities. The mosquito control district should continue to spray for mosquitoes so that places like Burbank which is surrounded by water, will not be polluted with mosquitoes. The more I think about it the more I realize that over populated mosquitoes would mean over populated fish which would cause a crash in the ecosystem. The mosquitoes already make it miserable enough, think how bad it would be if we didn't spray them in the first place.

Respectfully submitted,

Brady Contreras
