To whom it may concern,

In Burbank, which is a little town outside of the Tri-Cities, there is a lot of stagnate water and you know what that means. Mosquitoes! There are hundreds of them and the only way to control their population from spreading so massive that you wouldn't be able to go outside, is by using the fogging trucks. This may be putting chemicals into the air and causing unhealthy water but there would be so many mosquitoes that some of the people may move away.

If you don't let Columbia Mosquito Control District use the spray, then what are we going to do to stop the mosquitoes from being massive in population? Stopping this spray would increase the peoples chances of people getting Westnile Virus or even the Bird Flu. If a mosquito feeds from any animal that has Westnile or Bird flu then they are carrying the disease and the people it bites may come down with either or both.

Mosquito's are annoying all they do is bite you and make a bump on your skin that itches like crazy. You feel like you could take a knife and cut the bump off just so it doesn't itch anymore. People get bit even though the spray is used and I do not want to find out what it's like if it wasn't used! People would be going crazy and try to takes matters into their hands. Everything would be chaos! You should not pass this permit for the sake of Burbank and other towns with the same problems.

Respectfully submitted,

Zachary Grimm
