To whom it may concern:

Hello, my name is Michelle Holzer and I would like to speak my opinion about our fogging. I think you should keep fogging because the wvenile virus has already killed helpless animals in Burbank, as in horse, cows and other animals. I live by a pond and a lake and I know how bad it is to be attacked by mosquitoes, they are very obnoxious and we all hate them. I would like it if you guys kept fogging to keep the population down and under control; we have enough mosquitoes already. What would it look like if you guys didn't fog? How many more animals would get the wvenile and have to be put down? When a farmer loses an animal it costs them a lot of money and food if it's a beef animal. There are people here in Burbank that love their horses and livestock they would not like to lose their favorite pet over a little mosquito. I think we should be able to spray around the water because all the mosquitoes live in the water and it's not going to do any damage to the water cycle or any fish. There is no good reason not to be able to spray over the water, and kill the mosquitoes. Burbank is surrounded by water and if we aren't able to fog around the water then we would rely be able to fog at all. We need to spray in the water to keep the population down to a minimum. Thank you for your time.

Respectfully submitted

Michelle Holzer
