Subject: Mosquito Spraying Comments in the Longview, Washington area
Date: Monday, March 08, 2010 2:59:54 PM

In the past I have called our Mosquito Control District due to the many problems with the big amount of mosquitos that are in our area during the summer months. We live in the Windemere Addition #1 district just off Ocean Beach Hwy and 46th. There is a long slough that runs along our area and down the right side of 46th to Ocean Beach. There are also new homes from Hud with many children in them that have been placed right next to this slough. There is a play ground which was built in this sub division and turned over to the City of Longview and at time children are unable to play there due to the mosquito problem. The spray/fog disappears quickly when used in the air. At times we are unable to sit on our patio during the day or night due to this problem. We feel that the spray used in our areas is not that frequently used as to cause any problem with the Washington State waters.

Please do not stop their ability to use this spray. As you yourself are aware, mosquitos carry many diseases and we do not wish to contract them. We also would like to live comfortably outside on our property. As far as we are concerned, they should be doing this more often as it doesn't completely do away with them, which we wish it would.

Molly & Bill Beaird
4611 Windemere Street
Longview, Washington 98632
Telephone: 360-425-9928

If verification that I wrote this e-mail is necessary, please contact me in California where I am on vacation. I want my comments presented and considered.

Telephone No. in California is 1-760-343-5320. We will be here until the end of April. Thank you.
