Jonathan,

I've lived in the Tri-cities area for several years now. I as most tri-citians, enjoy the warm evenings sitting outside enjoying the beautiful weather. I know that this was made possible, with support by the mosquito control districts through spraying the open irrigation canals and ponds. Excessive mosquitoes **will** severely impact everyone's health, quality of life, use of parks and recreation in the community. We are justly upset about the proposed Washington State Department of Ecology permit changes. Please share these concerns with those who write the permitting language and ask that they reconsider to allow the continued spraying, in the areas where mosquitoes thrive, in an effective manor, so that we can all continue to enjoy these wonderful summer evenings, in backyards or at a park, without the need to use personal heavy use of "Deet" or "bug-off" type products that are cancer causing.

Thank you.

Regards,

Kevin A. Kennedy
