I can't believe that there is even a question as to if spraying of adult and vector mosquitoes should take place or not. With all the concerns over the West Nile Virus, and the health issues involved to anyone bitten by a mosquito that is carrying this virus, there should be no question that the spraying should take place.

My family frequents the Pot Holes for fishing, camping and water sports, and there is always a big concern when it comes to mosquito bites, especially for the little ones. Last year was terrible and we were hoping that spraying would take place this year to keep this same problem from happening this year.

Please allow the spraying to take place, as it is my understanding that the districts are spraying natural pyrethrins which is approved for aquatic use and would not be harmful to the fish and other aquatic life, as well as being EPA registered and FIFRA labeled. Why would you even consider waiting until there is a West Nile outbreak before you spray?!?!?

Thank You!

Mary
