Subject: SPRAYING OF MOSQUITOS
Date: Sunday, March 14, 2010 5:51:25 PM

TO WHOM IT MAY CONCERN:

MY FAMILY HAS GONE TO MARDON RESORT FOR OVER 20 YEARS AND LOVED THE EVENINGS WITH MY GRAND KIDS SITTING AROUND A CAMPFIRE. BUT, THEN THE MOSQUITOS WERE SPRAYED. NOW YOU ARE SAYING THEY ARE NOT GOING TO SPRAY UNLESS SOMEBODY GETS SICK...WELL. HELLO...WOULD YOU LIKE TO SEE YOUR GRAND CHILDREN BE RUSHED TO THE HOSPITAL BECAUSE THEY ARE ILL FROM A MOSQUITO BITE.....

I HAVE READ THE FORUM THAT TOOK PLACE ON MARCH 3, 2010 AND I AM NOT GOING WITH THE IDEA OF NOTHING BEING SPRAYED UNTIL ILLNESS OCCURS...WHAT IS WRONG WITH YOU PEOPLE...

THE VECTOR MOSQUITOS ARE A NUISANCE AND SHOULD BE TAKEN CARE OF IN THE SEEPS AREA ...I UNDERSTAND WHAT IS BEING SAID ABOUT THE MATERIAL BEING USED BUT, FROM WHAT I UNDERSTAND THE MATERIAL USED IS PYRETHRUMS WHICH IS DERIVED FROM THE CHRYSANTHEMUM PLANT BUT, CAN BE HARMFUL IN WRONG DOSES. I FOUND THAT A HARMFUL DOES IS .75 PER ACRE. BUT, THE BOARD FOR THE MOSES LAKE AREA WOULD USE .58 OUNCES PER ACRE. IT HAS A 14 DAY LIFE AND THEN IT IS ALL GONE. I THINK THE DOE NEEDS TO READJUST THE THINKING ON THIS MATTER AND CONCERNED THE LIFE OF CHILDREN AND ADULTS THAT WOULD BE HARMED BY THIS DECISION...

THANK YOU
