Subject: Change of Mosquito Control Policy
Date: Tuesday, March 16, 2010 9:47:27 PM

To Whom It May Concern,

It has come to my attention that there is a proposed change being sought in the management of mosquitos in the state of Washington.

Our household want there to be a continuation of nuisance aduicide for mosquitos. I prefer the "danger" of the fogging to the danger of becoming infected with the West Nile Virus and Encephalitis.

If you are concerned about the public's viewpoint, please listen to our requests and make sure that :

We have a hard working team that we want to be able to continue to control the mosquitoes before they become an issue. Please do not separate nuisance and vector mosquitoes. Do away with the term, "waters of the state", change the language so that aduicide control can be carried out by local districts, get rid of the restrictions on Malathion and Nalid.

Thank you for your time,

Joyce Melton
Burbank, WA
