---

Dear Sir:

We protest the DOE's proposed rule that would block Cowlitz County from killing adult mosquitoes that don't carry diseases if they're found near bodies of water. It's a well-known scientific fact that mosquitoes carry diseases and it makes far more sense to us to eliminate all adults, as well as their larvae, rather than trying to guess which adult mosquitoes might carry a disease and which ones don't.

We own two properties in Cowlitz County that are both located near water. Under the County's present mosquito control practices, we can enjoy the great outdoors, especially in the early evenings.

Please see that the DOE receives this comment and our wish that they do not enact the new "rule" pertaining to this matter.

Thank you for your consideration.

Sincerely,

Walt and Jeffra Naze
