Subject: Please reject the Oyster Growers Assoc proposal to use pesticide in Willapa Bay (or anywhere)
Date: Thursday, December 04, 2014 1:37:08 PM

Hi Derek,

Thanks for taking comments on a proposal from the Willapa Grays Harbor Oyster Growers Association to use the pesticide imidacloprid to eliminate burrowing shrimp.

I'm opposed to spraying insecticides over 2,000 acres in Willapa Bay. This is one of the insecticides that has been implicated in the die-off of honey bees, our key pollinators; not to mention killing off other non-targeted marine life.

It's this kind of magical thinking that we can continue to poison our environment and not poison ourselves and that is making us and the planet less healthy and is at the root of climate change.

Please reject the Willapa Grays Harbor Oyster Growers Association proposal to use the pesticide imidacloprid, or any other pesticide.

Sincerely,

Jane Lindley
