Greg,

For scoping comments, if we don't have one already -- i believe we should have a step to acknowledge receipt of comments sent by email.

Diane Butorac has an example of what has been used for a different scoping process. It's a simple email reply.

> I'm writing to you about the sand shrimp in the Willapa Bay... As of 2012 they have stopped the spraying of these pest.. please please help the Oyster farmers in our bay. These sand shrimp will be more devastating to our Oyster beds & Bay than the spartina.. We can't afford to not control these pest. They are so destructive to the bay... They will burrow all the Oyster beds until they are gone.. Spraying them to keep them under control has been an on going method in the Willapa Bay and it's a must do now. Our local Oyster farmers have worked hard to keep the echo-system going positivly in the bay for over 100 yrs... Gaining great progress in the past several yrs. This spraying of these pesty shrimp has kept our farmers in business. We now have to find a way to keep them under control. If we do not then our beautiful bay will be nothing but a mud hole. I'm all for a remedy. I don't know any stastics of the past spraying causing any health issues. What I do know is if we don't control these shrimp ..our bay will be lost.. Please help. Thank you Cindi Stallard [stallard\\_jc@comcast.net](mailto:stallard_jc@comcast.net)
