

STORMWATER WORK GROUP

ASSESSMENT QUESTIONS TO PRIORITIZE

1 *General clarification: the focus of the Stormwater Work Group is on areas of developed and*
2 *developing lands, and our initial work will not address commercial agriculture or forestry.*

4 **STATUS AND TRENDS – IMPACTS OF STORMWATER ON BENEFICIAL USES**

5 What are the *effects* of flows and pollutants in stormwater on receiving waters and beneficial uses?

- 6 • What are the effects/potential impacts of pollutants/stressors from stormwater on the habitat
7 and quality of our marine, lake, stream, ground, and other receiving waters? On biota? On
8 human health?
 - 9 ○ What are the best indicators that stormwater has impacted water or sediment
10 quality, habitat or biota?
 - 11 ○ Which pollutants/stressors most influence biota or human health? Where or under
12 what conditions?
 - 13 ▪ What are the concentrations of *nutrients and pathogens* in waters that
14 receive stormwater and where do nutrients and pathogens have the
15 greatest impact on human health and biota?
 - 16 ▪ What are the concentrations of *toxic chemicals* in waters and sediments
17 that receive stormwater and where do toxic chemicals have the greatest
18 impact on human health and biota?
 - 19 · What is the relative severity of the impact of specific toxic chemicals,
20 or categories of toxic chemicals, in stormwater?
 - 21 · What are the chronic and acute effects of toxic chemicals in
22 stormwater? What are the processes/mechanisms by which toxic
23 chemicals harm biota?
 - 24 ▪ What are the effects of increased *flow* rates and volumes from
25 stormwater? How do these changes impact the habitat and biota?
 - 26 • Where does stormwater significantly impact receiving waters, resources, species, or beneficial
27 uses in the Puget Sound basin?
 - 28 ○ Where does stormwater *currently* have a known, defined impact on water quality,
29 habitat, or biota, and where may stormwater soon *become* a problem?
 - 30 ▪ What are the potential impacts of climate change on stormwater?
 - 31 ▪ Where do increased *flow* rates and volumes from stormwater have the
32 greatest impact?
 - 33 · What differences in magnitude and timing of peak and low flow in a
34 particular basin (WRIA) are due to stormwater?
 - 35 ○ What size, location, or other variable makes a particular stormwater discharge
36 more or less likely to cause harm?
 - 37 ○ How does stormwater from one part of the Puget Sound basin affect other parts?
 - 38 ▪ What is the relationship between stormwater discharges and habitat and
39 water quality conditions in the nearshore environment?
 - 40 ▪ What is the relationship between stormwater discharges and water quality
41 conditions in deepwater Puget Sound?

STORMWATER WORK GROUP

ASSESSMENT QUESTIONS TO PRIORITIZE

42

43 STATUS AND TRENDS – STORMWATER CHARACTERIZATION AND POLLUTANT LOADINGS

44 What are the relative contributions of stormwater to harm compared with other pathways in the Puget
45 Sound basin? How do these relative contributions vary geographically and how are they changing
46 over time? Where did the pollutants in each part of the Puget Sound basin come from?

47 *[Note: Although these questions are beyond the scope of the Stormwater Work Group, we propose to*
48 *contribute to the overall answers by answering the highest priority questions about stormwater.]*

49 • What are the concentrations of toxics, nutrients and pathogens entering Puget Sound and the
50 food chain from stormwater?

51 ○ What are pollutant concentrations and loads from stormwater? What factors
52 affect fate and transport of stormwater pollutants? How do concentrations and
53 loads vary based on geography, geology, climate, land use, season, and other
54 conditions? Where are the greatest loads? Where do we need to be focusing our
55 efforts?

56 ■ What proportions of the pollutants (nutrients, pathogens, toxic chemicals)
57 in stormwater reach surface waters via: air deposition, specific land uses
58 (commercial, residential, industrial, transportation), groundwater, spills,
59 permitted point sources?

60 ■ What is the variability in stormwater pollutant loads by land use or
61 geographic area? What other variables influence the spatial and temporal
62 distribution of pollutant loads?

63 ■ How does land use influence pollutant concentrations and loadings?
64 What pollutants are coming from each land use type and what are the
65 primary and secondary sources of those pollutants? What land uses or
66 land use combinations are of greatest interest?

67 ■ What factors within a land use control pollutant concentrations and
68 loadings?

69 ◇ How do differences in stormwater infrastructure (*i.e.*, pipes versus
70 ditches) affect pollutant loads and flows from similar land uses?

71 ■ How do air transport and deposition affect stormwater pollutant loads?

72 ■ What proportion of pollutant loads from stormwater reach Puget Sound?
73 Where significant differences exist (*i.e.*, pollutant loads do not “add up”
74 likely due to losses between upper reaches and mouths of rivers/streams)
75 what are the explanations for the differences?

76 ■ What is the seasonal and annual variation in toxics concentrations and
77 loadings throughout the Puget Sound basin?

78

79 EFFICACY OF STORMWATER MANAGEMENT

80 Are our stormwater management actions preventing and reducing future harm in Puget Sound?

81 • How effective are the current suite of BMPs in preventing and reducing future harm?

82 ○ What techniques are most effective at the site or local scale, and under what
83 conditions?

STORMWATER WORK GROUP

ASSESSMENT QUESTIONS TO PRIORITIZE

- 84 ▪ Among the most widely used practices and promising new practices that are
85 available, what specific individual BMPs are most effective in reducing
86 pollutant loads at new development sites?
- 87 ◊ How effective are structural treatment BMPs in reducing pollutant
88 loads?
- 89 ◊ How effective are source control practices in reducing pollutant
90 loads?
- 91 ◊ How effective are infiltration practices in reducing pollutant loads?
- 92 ○ To what extent are Low Impact Development (LID) and other flow reduction
93 approaches effective in preventing and reducing future harm?
- 94 ▪ What is the ability of watershed-scale application of low impact development
95 in an area of new development to effectively maintain the hydrologic regime
96 in a stream?
- 97 ▪ Is there a significant difference in stream flows in basins where LID is
98 encouraged and practiced?
- 99 ▪ How do LID practices affect critical areas and wetlands?
- 100 ○ What specific techniques or combinations of techniques are most effective at the
101 collective or regional scale and under what conditions?
- 102 ▪ What is the effectiveness of watershed-scale combinations of stormwater
103 management actions (techniques) at reducing harm?
- 104 ◊ Under what conditions are findings likely to be transferable to other
105 watersheds?
- 106 ▪ How effective are cumulative BMPs, or targeted suites of BMPs, in reducing
107 pollutant loads at a watershed scale? At the Puget Sound basin scale?
- 108 ▪ What changes in land use practices are most effective in reducing pollutant
109 loads?
- 110 ▪ What are the most effective land use planning tools to protect existing high-
111 functioning habitat from harm caused by stormwater?
- 112 • Are there unintended effects of BMPs?
- 113 ○ Are there places where stormwater management practices are causing harm?
- 114 ○ To what extent are BMPs for flow control reducing particulate pollution and
115 exacerbating temperature problems?
- 116 ○ Can stormwater be infiltrated into the ground without creating a soil or shallow
117 groundwater pollution problem?
- 118 How can we most effectively target and prioritize retrofit projects throughout the Puget Sound basin to
119 reverse past harm?
- 120 • To what extent can retrofits reverse past harm? To what extent can the beneficial uses of water
121 bodies be restored in sub-basins that already have some degree of development? At what
122 degree of development, or under what other specific conditions, is a particular retrofit strategy
123 most likely to be successful?

STORMWATER WORK GROUP

ASSESSMENT QUESTIONS TO PRIORITIZE

- 124
125
126
- Among the most widely used practices and promising new practices that are available, what specific retrofits or restoration practices are most effective in reducing pollutant loads and recovering damaged habitat?
 - 127
128
 - What are the benefits of restoring hydrologic equilibrium to an urban stream that is not returned to its historic condition?
 - 129
130
 - To what extent can retrofits reduce loading of toxic chemicals to surface waters and sediments in an urban watershed?
 - 131
132
 - To what extent can retrofits reduce loading of nutrients and pathogens to surface waters in a suburban or rural watershed?
 - 133
134
 - How effective are source control practices in reducing pollutant loads from existing development?
 - 135
 - How effective are site-specific or targeted land use practices?
 - 136
137
 - How effective are public education and outreach in achieving behavior changes that result in reduced pollutant loads?
 - 138
139
140
 - How much will new practices, products, or product substitutions used on the landscape reduce pollutant loads? Are they better or worse than existing practices/products for pollutants of concern?
 - 141
142
 - To reduce pollutant loads, is it most effective to target new development, retrofit existing development, or a combination of both?
