Subject: Washington Aquatic life criteria for gasoline, diesel, crude oil, etc...
Date: Wednesday, March 04, 2015 5:52:09 AM

To whom it may concern ,

I am Michel A. Defo and i work at the Ministère du développement durable, de l'environnement et de la lutte contre les changements climatiques (MDDELCC), Québec, Canada.

I am writing you in order to know if there is anything about the Washington aquatic life criteria for petroleum (gasoline, diesel, crude oil...) and PAHs

Actually in Québec, we want to develop new criteria for the protection of aquatic life. As the only criteria we have are from 1996 (MPCA), I want to know if you developed criteria for your state.

In your opinion is there any state in the United States or in the world who developed these criteria for petroleum hydrocarbons, particularly for the protection of aquatic life? Would you have any contacts in your network that I could directly addressed my questions?

Could you please send this question to the right person if it is not your mandate to respond me?

Sincerely,

Michel Defo
