

NATIONAL PETITION TO SUPPORT CLEAN WATER!

We value clean water and toxic-free fish. We urge you eliminate polluter-friendly loopholes and to revise the proposed human health criteria water quality standards.

We urge you to strengthen water quality standards for Washington State. The draft health criteria water quality standard proposal would allow cancer-causing chemicals, as well as mercury and PCBs, two of the most long-lived and toxic chemicals, to remain at unsafe levels by increasing the allowable risk of cancer for Washington citizens. This is unacceptable for the safety of Washington families, particularly children who are most susceptible to harm from toxic pollution. Our government has an obligation to protect its citizens and our water from dangerous pollution.

We ask that you revise this draft, decreasing the cancer risk rate to one in one million and tightening the excessive lenience shown to polluting industries.
