Subject: Cancer rate?
Date: Monday, March 23, 2015 5:15:26 PM

There is NO acceptable level of cancer risk.
However here we are trying to be practical in the modern world where so many things cause us cancer.
Well...lowering those standards when it comes to our food is completely backwards and wrong.

Seafood is and always has been a part of Washington's history and culture. Are you willing to let that be also what could kill us?

By increasing the acceptable cancer risk rate in our salmon, our oysters and and clams, you are caving into those who pollute our environment. you are saying corporate interest is more important than the health of your voters. You are showing a disregard for one of Washington's greatest natural resources.

Shame on you!
