

CSWGP – Hearing Comments – August 5, 2015

My name is Jen Stebbings. I'm with the Port of Tacoma. I guess my testimony is just a series of questions.

So, question number one – What is Ecology's definition of contaminated soil and/or contaminated groundwater? Question number two is – Who will be reviewing and responding to comments submitted? And question number three is – In the 2014 Industrial Stormwater Permit update, Ecology added TSS as a benchmark, essentially saying "control the solids, control the pollutants." Since the construction stormwater general permit is considered a temporary, short term permit, why is the construction stormwater group, not using the same approach on sites that are considered contaminated?
