Subject: General Permit Public Comment

Sorry that this is one day late, but please consider my comments.

1. Under S8.A of the draft Industrial Storm Water General Permit, the phrase "all parameters" is used numerous times. It is not clear what "all parameters" means: all parameters tested for or all parameters that exceed a benchmark. Could you please clarify what "all parameters" is?
2. If a facility has completed the requirements of a Level Two or Level Three response before the issuance of this General Permit, does the facility start with a "clean slate" in regards to benchmark exceedances and the corrective action requirements?

Thanks, Elysia
